FIRST

ADDITIONAL SUPPLEMENT

TO

LOUDON'S ENCYCLOPÆDIA OF PLANTS:

COMPRISING

THE SPECIFIC CHARACTER, DESCRIPTION,

CULTURE, HISTORY, APPLICATION IN THE ARTS,

AND EVERY OTHER DESIRABLE PARTICULAR RESPECTING

ALL THE PLANTS

ORIGINATED IN, OR INTRODUCED INTO,

BRITAIN,

BETWEEN THE FIRST PUBLICATION OF THE WORK IN 1829,

AND

JANUARY, 1840.

PREPARED BY W. H. BAXTER, JUN., UNDER THE DIRECTION OF J. C. LOUDON,

AND REVISED BY GEORGE DON, F.L.S.

FIRST

ADDITIONAL SUPPLEMENT

TO

THE ENCYCLOPÆDIA OF PLANTS;

BRINGING DOWN THE WORK TO MARCH, 1839.

Prepared by WILLIAM H. BAXTER, under the Direction of J. C. LOUDON, and finally revised by GEORGE DON, F.L.S.

N B A † prefixed to genera or species indicates that such genera or species have been already registered, but are here repeated with more perfect details

Page 8. CLASS II — DIANDRIA 2 STAMENS.

Order I MONOGYNIA 2 Stamens. 1 Style

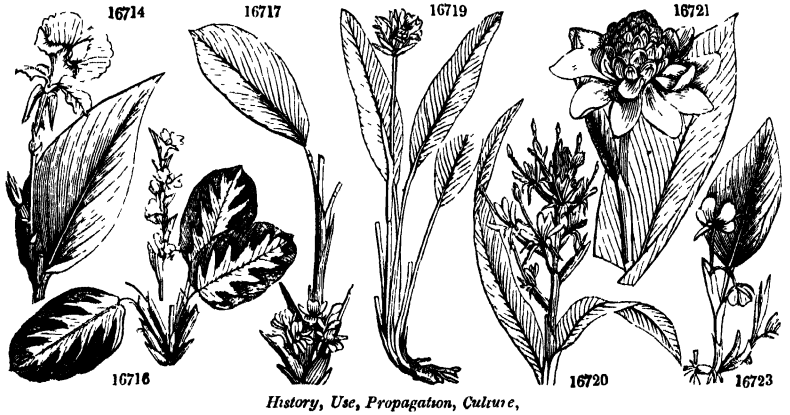
2500 47*a* ***Belopérone*** Calyx 5-parted Upper lip of corolla concave, lower one trifid Stigma subulate Capsule compressed from the base to the middle and empty, but swollen, and containing 4 seeds at top
2501 64*a* ***Streptocárpus*** Cal 5-cleft Cor tubularly funnel-shaped, Limb 5-lobed, nearly equal, oblique. Stam 4 2 front ones fertile, the other 2 tubercle-formed and sterile. Valves of capsule twisted Stigma 2-lobed Seed minute, naked.

Page 30 CLASS III. — TRIANDRIA 3 STAMENS.

Order I MONOGYNIA 3 Stamens 1 Style

2502. 80*a* ***Bétckia***. Cal 1-toothed, deciduous Cor funnel shaped, 5-lobed Caps 1-celled, 1-seeded
2503 94*a*. ***Streptanthera*** Perianth 6-parted, tube very short Anthers twisted round each other Ovar. 6-angled, also a little twisted. Ovula kidney-shaped
2504 107*a* ***Amsánthus*** Spathe 2-valved subringent Perianth unilabiate, limb equal, 6-parted, upper segment long, cochleariform Stigmas 3, dilated, entire Capsule triangular, 3-valved Seeds cumulated, winged.
2505 114*a* ***Dietes*** Flower 6-parted, equal, spreading. Stigmas petal-like bifid
2506 114*b* ***Leucocóryne*** Perianth salver-shaped, 6-parted, 3 fertile combined, and the 3 sterile on the limb, fleshy, and sometimes antheriferous Style terete Stigma simple
2507 114*c* ***Triteleia*** Perianth funnel-shaped, 6-cleft Stamens 6, upper ones opposite the petals. Stigma 3 lobed Ovarium many-seeded
2508 117*a*. ***Sisyrinchium*** Spathe 2-lvd Calyx 0 Petals 6 Filaments connate Style 1 Caps 3-celled, inferior
2509 117*b* ***Renealmia*** Perianth 6-parted Filaments connate or distinct Stigmas 3, involute, filiform, acute Capsule obovate. Seeds angular

Page 76 CLASS IV. — TETRANDRIA 4 STAMENS



Order I. MONOGYNIA 4 Stamens. 1 Style

2510. 237*a* ***Conospermum***. Cal. ringent: Upper lip 2-lobed. Nut pappose, inversely cone-shaped
2511 237*b*. ***Botrýceras*** Cal 4-parted. Cor. 4-petaled Style arcuate. Nut subulate
2512 238*a*. ***Anadènia*** Calyx nearly regular. Gland 0 Follicle 1-seeded.
2513 238*b*. ***Agástachys***. Calyx regular. Filaments distinct. Stigma lateral. Ovary 1-seeded
2514 295*a* ***Tripóstoma***. Limb of cal. 4-parted Cor tubular at base, and ventricose at throat, bearded inside Stam inserted in throat. Style capillary Stigm. 2, subulate, hispid. Caps. globose, 2-celled, opercul, many-seeded, often 1-celled Seeds small, angular, scabrous.
2515 306*a* ***Benthámia***. Flowers disposed in heads. Involl of 4 petal-like parts. Cal 4-toothed Petals 4, fleshy Fruit constituted of many pomes grown together. Endocarp 2-celled. Seeds solit and pendul in each cell

History, Use, Propagation, Culture,

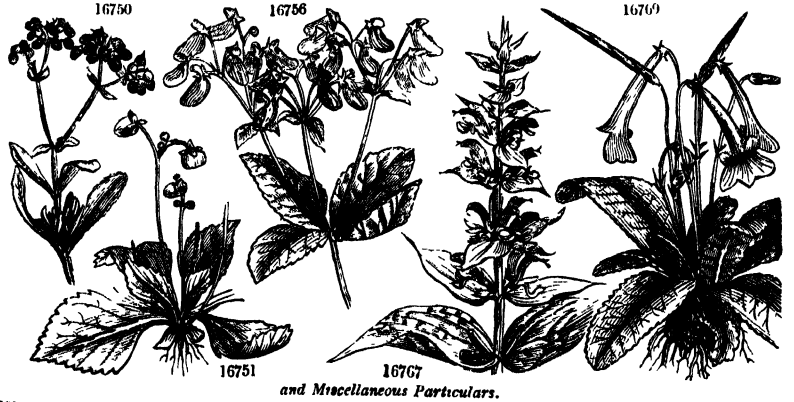
51 *Calceolària*. The varieties and hybrids of this genus, which have been raised in different parts of the country, are almost innumerable, and some of them are of very great beauty. They are all of the easiest culture, and require very little heat. Most of them continue flowering several weeks, and some of them the greater part of the summer.

16733 Bran. swoll. at joints, Lvs ovate -acum obsc. serr Flws in short axil 2-3-flwd racem. erect, Bract 4-5 base each fl. lin -fil [Brac. and cal segms subul short. th cor
16734 Stem joints short tumid in middle, Lvs. obl -lan very acumin wavy minutely downy, Panic termin crowded,
16735 Lvs. on long pet ovate-atten at base sharply acumin. retic. Bract numer. outer ovate-lanceo inner lin Cor. very long, Up lip erect ent low, revol 3-toothed.
16736 Lvs obl. atten. both extrems acute subcrenul Racemes term. Flws fascic Cal & brac lin thd., Cor sptd
16737 Lvs. ovate acumin. crenat Panic large termin Flws remotely fasciculsubsess disposed in slender elongated racemes

16738 Spikes axill. Brac. bracteol. and leaves lanceolate, Anthers calcarate at base

16739 Lvs. subsess. obl.-lan. acumin. very entire, Brac small, Cal segms. obt Tube bent, Spike termin subsimp

16740 Lvs. larger & broader than those of C integrifolia The whole plant clothed with viscid pubescence



16741 Leaves lanceolate-acumin. canescent beneath, Corymbs panicled Pedicels elongated
16742 Leaves ovate petiolate denticulate pubesc lower ones acute at base Corymbs umbellate few-flowered
16743 A hybrid between C corymbosa and C arachnoidea, with orbraceous and dirty-purple flowers [ovate bluntish
16744 Lvs obl -ovate bluntish much veined & rugose, hispidly hairy, Stem erect, very hairy, Segm of cal broadly
16745 Lvs rather obtuse atten at base velvety above beneath clothed with long hairs and small scale-lk bists serr Cal peltate deeply 4 cleft
16746 Stem lvs cordate decuss upper ones smaller entire with few long scat hairs on their surfaces, Calyx downy [bellate
16747 Lvs linear atten at both ends lined distinct serr Teeth reflexed, 2-in long 2 lines broad, Pedun comp um-
16748 Whole plant clothed with white wool, Lvs ovate or oblong, Flws corymbose, Calyxes 3-nerved
16749 Lvs ovate acute waved nerved, Lower ones atten at base and connate, Upper ones nearly cord sessile, Pan spreading
16750 Herb clothed with white cobwebbed-wool, Lvs ligulately-oblong little toothed petioles 5-in long, Peduncles terminal twin

16751 Stemless, Lvs radical ovate rhomboid rosulate serrated nerved, Scapes generally 2-3-flwd. pilose
16752 Leaves ovate biserrated, Branches dependent bluntly tetragonal of a rusty purple colour
16753 Lvs ovate-lanceol sharply serr pubesc Pedun collected into term panic generally 4-flwd shorter than lvs
16754 Stem pilose, Lower lvs ovate-oblong obtuse petiolate, Upper ones sessile, Lower lip of cor very large [sess Infl cymose many-fl
16755 Stem cal & bract beset with glandul hairs, Stem lvs oblong-lanceol undul thd. upper ones ent ov acum
16756 Radical lvs many. stem lvs few 2 lower ones subpet upper ones sess Pedic racem. 1-flwd Caps papery [fulvous
16757 Rad lvs. obov rather spathul obtuse uneq thd Stem lvs ov pointed alm. ent. Corymbs forked 10-30-flo Ped
16758 Radical lvs. ovate somewhat obtuse, Corymbs few-flowered [thit clthd gland pubes.

[revol obsol 3-thd
16759 Lvs. ovate-acumin rounded at base. lower ones serr upper quite ent Lower lip much wider than upper
16760 Lvs obl.-lanceol. narrowed at base sharply & remotely toothed, Bract ciliated often purplish or yellowish [gland & viscid
16761 Lvs. ovate-cord 2-3-in long glabrous obtuse rather wavy, Flws erect oppos subsecund, Bract ovate acute
16762 Lvs cord -ovate acumin. toothed, Whorls 6-flwd Bract decid very large broadly ovate, nerved red
16763 Lvs. oval obtuse rounded or cuneated at base irreg crenated in middle nearly glabrous, Whorls 2-flwd Cal
16764 Lvs. cord -ovate crenated hoary beneath, Bract decid Galea villose [usually cld

16765 An undescribed species, introduced by Lagasca
16766 Racemes branched, Flowers fewer & smaller than those of *S phlomoides*
16767 Lvs. ovate acum crenate-sinuate upperm ent Fls in dist about 6-flwd whorls each wh supported by 2 ov -acum. awned concave streaked bracts
16768 Lvs petiol broadly ov acute subcord. at base, Rac loose verticill few-flwd Upper lip of cor. entire toothed. Lower acute

16769 The only species

and Miscellaneous Particulars.

2501. *Streptocárpus* This plant is very readily increased by seed, or by division of the root, and thrives best in a light rich soil. It is a very ornamental stove herbaceous plant, and well deserving of cultivation.

History, Use, Propagation, Culture.

105. *Gladiolus* Some valuable additions have been lately made to this beautiful genus, of which the most splendid is unquestionably *G.* natalénsis, which is also very hardy, and of as easy propagation and culture as the *G.* communis

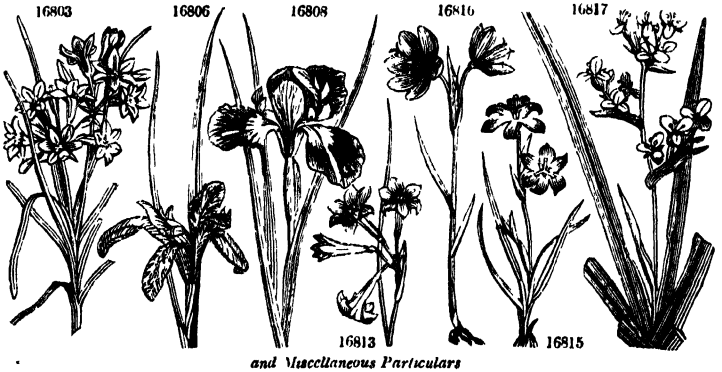
16790 Lvs. 3-nerved, Scape few-flwd Segments of cor ringent even somewhat transparent
16791 Lvs. very narrow, Scape 2-flwd Tube equal to the spathe, Segments lanceolate obtuse
16792 Lvs linear ensif ribbed slightly glaucous, Tube scarcely equal to the spathe [hollow
16793 Lvs narrowly linear elong straight rigid promin 2-nerved, Lower segm of fl obovately ovate spoon-shaped
16794 Lvs. broadly ensif acumin. ribbed, Spike distich about 10-flwd Tube shorter than outer spathe, Segm ovate-oblong recurved and wavy
16795 Leaves ensif bicostate obscured nerved, Spikes term. 10-12 flwd Sheath dbl convolute, Tube ½ length of fl. campan spreading
16796 Lvs 8-9 green nerved acute twisted

16797 Nearly allied to A *funcea*, but differs in having longer tube to flower, greater irregularity of limb and form of spots at base of 3 anterior segments

16798 **Scape simple erect,** Lvs ensif linear acute smooth nerved, Flowers distichous

16799 **Lvs. equal linear ensif** Scape round branch at top
16800 **Lvs. distichous ensif.** spirally twisted, Scape branched compressed leafy many-flowered

16801 **Lvs. linear glaucous,** Limb laciniate lanceolate, Stamens sterile subulate obtuse



16802 **Lvs. ovate-lanceolate,** Limb linear-lanceolate
16803 **Lvs. linear glaucous,** Scape longer, Involucrum with pedicels twice as short, Umbel many-flwd
16804 **Lvs. linear,** Involucrum sheathed at top bifid, Peduncle filiform shorter

16805 **Crested,** Scape 2-flowered, Leaves falcate shorter, Spathe 2-leaved

[12 furrows and 12 obtuse angles
16806 Scape nearly round ltl flatt twist about 3-flwd Spathe 3-bracts outer nearly 1 it long very narr atten Germ
16807 Sheath radical long surrounding the leaves, Lvs very long thick quadrangular striated very glaucous
16808 Lvs in tufts rigid erect linear-ensif tough, Stem angul leafy, Ovar on long stalks not enclosed in flor. leaves somewh 3-cornered, Stigm 2-lbd short
16809 Stem 3-4-flwd Lvs. linear-ensif striat acumin slightly falcate, Peduncle shorter than foliaceous spathe

[mucron Caps. pear-sh pubes
16810 Lvs linear-ensif striat Pedunc 4-5 in long, Pedic 1¼ in long also very slender, Pet 6 oblong-spathul retuse
16811 Foliage minutely hairy, Scape erect longer than lvs somet divided bearing mostly 3 fascicles of flws Flws with little heart sh spot at base
16812 Pedun. solit or 2-4, Spathe diphyl Bract scariose convolute, Col of fl long densely covered with longish gland. yellow hairs [sever. very frag nodding
16813 Lvs very narrow glauc subul at apex, Spath consist of bract. membran at margin lowerm sharpest, Flws
16814 Stem remarkably compressed, Spathe lanceol condupl green with broad white membr margin Germ glandlr.
16815 Bulb ovate, Lvs mostly radic. dply. striat sheathing, Spathe 2 unequal lvs about 2-flwd Pedun. 1-in long curved, Ov oblong glabrous
16816 Stem terete simple, Lvs lanceol. veined, Spathe gener. 3-flwd Segm of cor spathulate, Root bulbous

16817 **Lvs. oval-oblong pointed smooth on both sides,** Flowers in long racemes

and Miscellaneous Particulars

16815 ***Sisyrinchium speciosum*** is a lovely species, found about Valparaiso, on sandy hills, to be brought to perfection, it requires to be planted in dry light soil, and placed in a warm sunny situation in the green-house

History, Use, Propagation, Culture.

2514 *Lipóstoma.* The species of this genus thrive in any kind of light soil, and cuttings root readily in the same under a hand-glass, in a little heat

2515. *Benthàmia.* A very desirable, nearly hardy shrub, which, perhaps, might be rendered hardier by grafting it

CLASS IV. — TETRANDRIA.

MONOGYNIA.

16818 Lvs. linear-lingulate upperm. quite entire · lower ones sub 3-fid Calyx silky, Stigma smooth
16819 Lvs. hard stiff glandul on both sides upper 1 or 2-trifid cune & 1 or 2ce twisted at base, Heads of flws. crowd.
16820 Lvs. coriaceous lanc -lingul. or subspathul. faintly 3-nerved, Branches & perianth smooth

16821 Lvs subulat -filif imbricated, Spikes shorter than the axillary peduncle
16822 Lvs lanceol.-linear acute mucron slightly pubescent somewhat obliquely twisted

16823 Leaves lanceolate coriaceous serrated, Panicle corymbose

16824 Lvs pinnatifid slightly hairy, Lobes cuneiform, Follicle viscid

16825 The only species

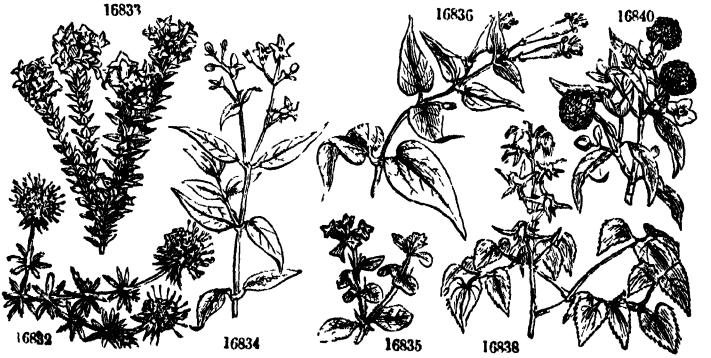
16826 Bran hoary slightly angul Lvs lin revol at edge with small mucro somet 2 or 3-fid at point densely hairy ben Cal extern silky

16827 Lvs spathulato oblong mucronate pubes on both sides, Racemes corymb Pedicels and calyx smooth
16828 Lvs oblong-obovate obtuse mucron above pubescent beneath very downy pale grey, Racemes recurved
16829 Lvs pinn segm altern lin -obl obt above downy with patent ferrug hairs below silky with adpressed hairs
16830 Lvs. pinnatif segm. acute smooth and veiny above hoary beneath, Racemes panic. Perian & pistil very smooth

16831 Cæspitose bearing many rooting stems, Lvs spathul rather hairy, Peduncle termin 1-flwd elongated

16832 Procumbent, Lvs 8-9 in a whorl & are as well as stems hispid, Style clavate much exserted bifid at apex

16833 Lvs sessile rhomb.-ovate acute very entire imbricated or spreading, Bract. few naked



16834 Lvs petiol ovate-lanceol taper into petioles firm much acuminated rather revol, Stip white glandul downy setosely jagged, Panic. loose at ends of bran.

16835 Plant hairy, Lvs roundish undulated spreading

16836 Lvs. cordate-acumin. shining on both sides, Bract connate, Pedun axill 1-flwd Tube clavato-funn -shaped

16837 Petiol numer filiform dichot sparingly hairy more abund at swollen joints, Petals flat
16838 Lvs tritern leafl cord -ovate petiol hairy, Rac many-flwd Sep lin obt. Petals ov -lanc inner ones spurred twice long th outer ones
16839 Lvs. tritern. leafl ovate-oblong petiol smooth

16840 The only species

and Miscellaneous Particulars

on Cornus sanguinea. It is readily propagated, either by seeds or by cuttings The fruit, when ripe, somewhat resembles that of the arbutus, but is much larger The flesh is yellowish white, rather insipid, but not unpleasant, although a little bitter; and, as Mr. Royle informs us, it is eaten by the inhabitants of the hills in the Himalayas

Page 108. CLASS V. — PENTANDRIA. *5 STAMENS.*

Order 1. MONOGYNIA. 5 Stamens. 1 Style.

2516 *349a Douglásia* Caps cartilaginous, 1-celled, 5-valved Cor infundibuliform; tube ventricose; limb flat, 5-parted Stigma a minute depressed cup Seeds 2, peltate oblong, convex on outside, concave on inside.

2517 *369a. Collomia* Cal campanulate, 5-cleft Cor salver-sh, tube slender. Stam. inserted towards middle of tube Cells of caps 1-2-seeded.

2518. *371a Eutoca* Cor. deciduous Ovar pilose Placentas linear, 4, or many, ovulate. Caps. half 2 celled.

2519 *381a Nierembérgia.* Cor with long slender tube and equal dilated limb Stam. exserted; filamen. combined at base Stigm transverse or peltate

2520 *381b.* Petúnia Cor. with short tube and dilated rather uneq.-limb. Stam. unequal, enclosed.

2521. *384a. Phaseólus.* Ovarium 3-celled, cells 3-seeded

2522 *388a Gília.* Cal. campanul, 5-cleft. Cor funnel-sh or subcampan Stamens inserted in throat. Cells of caps many-seeded

2523 *388b. Ægóchloa* Cal. tubularly campanulate, 5-cleft. Cor. somewhat salver-shaped. Stams. inserted in the upper part of tube. Cells of caps many-seeded.

2524 *388c Linánthus* Cal tubular, with 5 strong green nerves, terminating in subul. recurv. teeth at apex Cor funnel-sh Anthers filiform, hardly sagittate at base

2525 *388d Hugelia* Cal. tubul. campanul. Cor funnel-sh Tube short, exserted Stam. inserted at throat Anthers linear sagittate

2526 *388e. Leptosiphon.* Cal. tubul campan, lobes linear, subulate Cor funnel-sh; tube very long, slender, limb campanul., 5-cleft, with oval very entire lobes Stams inserted at throat Cells of caps many-seeded

2527. *388f Fénzlia* Cal. tubul campanul, deeply 5-cleft, with membranous sinuses and linear acutish erect segms Cor somewh funnel-sh, tube short, limb 5-parted Anthers ovate-sagittate, a little exserted

2528. *394a Melíchrus.* Cal many-bracteate Cor rotate or urceolate, furnished with 5 fascicles of glands near the base inside, segments half-bearded

2529 *399a Sphenotoma* Cal bibracteate Cor salver-sh, with slender tube, coarctate throat, and blunt beardless limb Stam epipetalous Hypogynous scales 5 Placent hanging from top of central column

2530 *399b. Trochocárpa* Cal. bibracteate. Cor campanul, limb spreading, bearded Stam. exserted Ovarium 10-celled Drupe baccate.

2531. *400a Poncelètia* Cal foliaceous. Cor short, campanul, 5-cleft, beardless Stam, hypogynous Anther peltate below middle, with marginato dissepiment. Hypogynous scales 0 Placentas adnate to central column

2532. *400b Cosmelia.* Cal foliaceous Cor tubular. Stam. epipetalous, adnate to dilated tops of filaments Hypogynous scales 5. Placentas, adnate to central column.

2533 *413a Pachypódium* Stam enclosed Anthers nearly sess., adhering. ? Hypogynous scales 0. Cor. salver-sh, with equal, obtuse segments Follicles ovate

2534 *424a. Nyctérisition* Cal and cor 5-parted. Stam 5, all fertile. Ovarium 5-celled; cells 1-seeded Stigma obtuse, almost entire Seeds bony, albuminous

2535 *462a Wahlenbérgia* Cor 3-5-lobed at apex, rarely divided to middle. Stam. 3-5, free, filaments rather broadest at base. Style enclosed, pilose, most so towards upper part Stigmas 2-5 Ovar combined with tube of cal Caps 2-5-celled, each opening by so many valves at apex, which bear each a dissepiment in middle Seeds very numer. minute.

2536 *464x Prátia* Limb of cal. 5-toothed Cor cleft on back, even to base; limb 5-parted, unilabiate Stam combined above Anthers cohering; two lower ones mucronate Stigma 2-lobed Caps baccate, crowned

2537. *464y* Túpa Cal. spherical, 5-parted Cor. cleft on back almost to base, limb divided into 5 segms, which are all united at their tips Stams combined almost to base; anthers cohering, bearded. Stigma 2-lobed, protruding Caps. 2-celled, many-seeded.

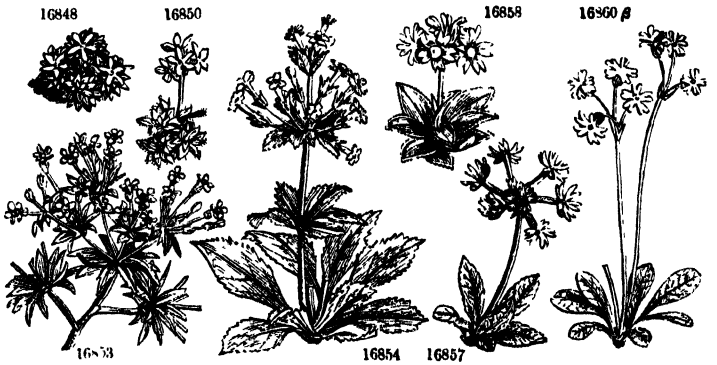
2544 509*a* *Colletia* Calyx campanulate, coloured Petals 0 Anth. 1-2-celled, reniform or ovate Disk cup-sh. Style simple, elongated Fruit dehiscent, containing 3 nuts.
2545 509*b* Retanilla Calyx urceolate, 5-cleft Petals cucullate, sessile Stam enclosed Anth reniform, 1-celled Disk covering bottom of calyx Style simple Fruit containing a 3-celled nut
2546 509*c* *Trevóa.* Cal turbinate, 5-cleft Petals cucullate Stamens enclosed Anthers 1-celled, reniform Disk almost wanting Style long, hairy. Caps membranous, 2-valved, 1-seeded
2547 518*a* *Colconèma* Cal 5-parted. Disk adnate to base of cal with 5-lobed margin. Petals 5, with spreading border Anth terminated by minute sessile gland Caps of 5 horned carpels
2548 529*a* *Escallónia* Tube of the calyx semiglobose, adnate to ovarium, limb 5-toothed or 5 lobed Petals 5, arising from calyx Stam 5 Anthers ovate-oblong Stigma peltate Style filiform, permanent. Caps baccate Seeds numerous
2549. 540*a* *Espèlton* In every respect the same as *Viola*, but the sepals are hardly drawn out at base, and the lower petal is not drawn out into a spur, but furnished with a small gibbosity Anth without appendages
2550 241*a* *Hymenanthèra* Sepals imbricate Petals at length reflexed Structure of stams. as in *Viola*, but joined at base into monadelphous disk, with a scale at back of each Caps rather baccate, 2-celled, cells 1 seeded
2551 565*a* *Oplothèca* Cal semi-5-fid, bibracteate Cor 0 Nectar tubular 5 toothed. Anth 5, sessile at mouth of tube of nectarium, and alternate with its teeth Utriculus 1-seeded Style undivided Stigma capitate.

Order 2 DIGYNIA 5 Stamens 2 Styles

2552 578*a* *Harrisónia* Cor urceolate, 5-toothed, throat naked Crown of stam of 5 pieces, each with a fleshy process or tooth
2553 578*b* *Tweédia* Calyx 5-parted Corolla campanulate Corona simple of 5 retuse exserted pieces opposite the petals Pollen masses ventricose. Stigma acuminated bipartite Gynostegium none
2554 579*a* *Philibertia* Corona double; outer one annular, entire, fleshy, undulated, inner one inserted on the top of the gynostegium of 5 entire fleshy segments. Cor urceolate, sinuately 5-lobed, furnished with small teeth between the segments
2555 590*a* *Physánthus* Cor tubular Tube inflato-ventricose, limb 5-fid, connivent
2556 592*a* *Tylophora* Corona simple, 5-lvd, leaflets depressed, fleshy, toothless inside, pressed to the gynostegium. Pollen masses transverse or ascending Cor. rotate.

Order 3. TRIGYNIA 5 Stamens. 3 Styles



2557. 684*a*. *Stackhousia* Calyx 5-parted Petals 5, joined by the claws Stamens unequal, alternating with the petals Stigma acute, simple. Capsule tricoccous

History, Use, Propagation, Culture,

2522. *Gília.* Elegant hardy annuals of the easiest culture, the seeds requiring only to be sown in the open border in spring. The larger the quantity of each grown together, the more showy their appearance.

2523. *Ægóchloa.* A genus of singular, but by no means showy, plants, requiring the same treatment as those of *Gília*.

2524. *Linánthus.* Culture, propagation, &c, the same as those of *Gília*.

16916 Lvs pinnatif. lobes few broad little-toothed, Cor scarcely longer than calyx, Placentas 2-ovulate
†2294 Nearly related to N parviflòra, but differs in flws. being twice the size & calycine append. being larger & longer
16917 Petioles auriculately dilat at base, Cor twice as long as cal Lvs. while oppos connate at base
16918 Lvs 3-4-lbd on each side entire or cut, Petiol without append. Cor twice as long as cal Placent 10-12-ovul.
16919 Lvs oppos pinnatif. lobes 5-9 alm. ent. Cor rotate very pilose bottom & obov. segms. Placent. about 10-ovul Seed strophiolate smooth

16920 Corolla 3 times longer than the calyx
16921 Corolla twice longer than cal Flws one half smaller than those of G. *linifòra*
16922 Corolla hardly exceeding the calyx, Habit of Arenària tenuifolia

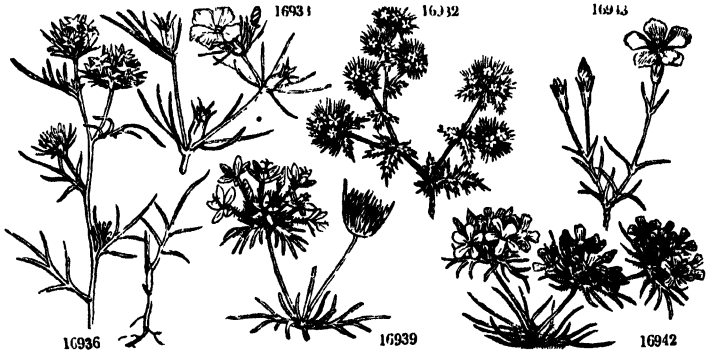
[or ovate flat
†2300 Lvs pectin-pinn Leafl linear acumin Tube of cor. 5 times longer than cal Limb spread Segms acute obl
[acumin channelled
16923 Lvs. pectin-pinn clthd cobwebbed villi as are bract, Leafl or segms lin mucron Segms of limb ov.-lanc.

16924 Lvs. glabr bipinn Flws. usually solit Corymbs loose on long pedunc Cor 4 times longer than calyx
16925 Lvs pinnatif Lobes ovate, Flws somewhat glomer Cor 3 times longer than the cal
16926 Lvs pinnatif rather woolly at length glabr Segm. oblong lanc ent or cut, Flws nearly solit. divaric. panic Cor twice long. than cal

†2301 Lvs pinnatif lower ones bipinnate, Segms linear, Flws solit term panic Cor about twice length of calyx

16927 Lvs bipinnate, Leafl. or segms linear subul Corymbs 3-6-flwd virgately panic Corolla about 3 times longer than calyx
[Cal segms subul
16928 Lvs pinnatif Segms narrow obl sinuat, Pedun axill solit 1-3-flwd Cor tubular hardly long than cal
16929 Lvs somewh bipinnate smoothish, Segms linear, Corymbs 3-10-flwd Pedun very long, Cor hardly twice longer than cal. [than cor
16930 Lvs 2 or 3-pinn Segms or leafl linear subul Cal rather woolly, Cor twice longer than cal Stam shorter
16931 Lvs bipinnatif. Segms linear cut, Flws sess dispersed in dense heads, Cor longer than cal. Stam shorter than cor

16932 Lvs pinnate, Leafl ent or cut lobes lanc lin very acute spinose, Cal segms lanceol Flws glomerate termin.



16933 Lvs opposite sessile palmate, with 3 to 5 linear-subulate segments

16934 Lvs numerous nearly all pinnatif glabr Tube of cor longer than cal Stam about equal in length to cor.
16935 Lvs short simple or furnished with 1-2-segm on each side tomen Tube of cor exserted, Stam exceeding cor.
16936 Lvs elongated simple or pinnatif clothed with loose white wool, Tube of cor. longer than cal Stam shorter than cor
16937 Lvs lower elongated simple glabr upper short pinnatif woolly, Tube of cor shorter than cal Stam equal to cor

16938 Lvs 7-11-cleft, Segms subul straight margins revolute, Tube of cor. hardly twice longer than limb, Filam very short
16939 Lvs 5-7-cleft, Segms oblong-linear, Tube of cor 2 or 3 times longer than limb, Stam 3 times shorter than limb of cor
16940 Lvs ditto, Tube of cor about 4 times longer than limb, Style scarcely equal to corolla

16941 Lvs ditto, Tube of cor 4 times longer than limb, Stams hardly ½ shorter than limb of cor Style little exserted
16942 Lvs 9-11-cleft, Segms subul erect margins revolute, Tube of corolla shorter than limb

16943 Herb nearly simple glabr or downy, Lvs oppos lin ent Flws 1-3 together pedunculate, Cor nearly 1 in long

and Miscellaneous Particulars.

2525 *Hugèlia.* Culture, propagation, &c., the same as those of *Gilia*
2526 *Leptosiphon* All the species of this genus are very pretty showy plants, and are well worth cultivating in every garden Culture, &c., of *Gilia*
2527 *Fènzlia.* Culture and propagation the same as those of Leptosiphon.

History, Use, Propagation, Culture,

2535. *Wahlenbérgia*. The seeds of the annual sp. of this genus require to be raised on a hot-bed; and, when sufficiently strong, planted into the open border, in a sheltered situation. The perennial sp. grow freely in loam, peat, and sand, and strike root readily under a hand-glass

2536 *Prátia* Plants of this genus are readily increased by division of the root, or by seed; and thrive best in a mixture of loam, peat, and sand

2537. Tùpa. The species of this genus are deserving cultivation in every collection, on account of the beauty and singularity of their flowers They are generally raised from imported seeds; and, when the plants are sufficiently strong, may be planted in the border under a south wall, but require to be potted in the autumn, and placed in the green-house during winter *T* Feuillèi yields a dangerous poison in Chile

16975 Lvs. ovate-lanc. short-acumin scabrous on both surfaces rounded at base, Cal. segms linear villous

16976 Lvs. scarcely petiolate ovate or subcordate scabrous above and on the nerves beneath, Corymbs terminal

16977 Stem creeping

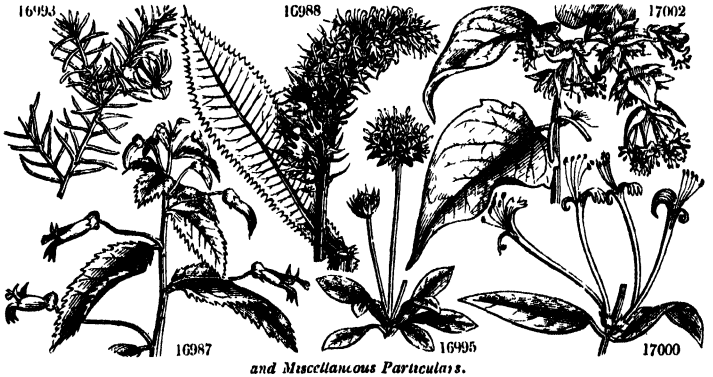
[Cor rotate
16978 Stems diffused, Lvs. reniform-cordate deeply serrated, Peduncle usually 2-flwd Segms. of calyx toothed,

16979 Glabrous, Stems branched, lower lvs roundish, upper ones linear spatulate deeply serrated, Pedunc corym.
16980 Stems filif creeping hairy, Lvs roundish-cord serr petiol hairy both surfs oblique at base, Pedic. solit. Cal. segms lin subul.

16981 Lvs lanceolate cuspidate, doubly serrated, decurrent at the base, Bracts convolute, Calyx toothed subulate, Anthers glabrous
16982 Stem erect thick suffrut at base simple leafy, Lvs ov-lanc sess decurrent clothed sof whitish down, Raceme term spicate
16983 Glabrous, Lvs lanceolate serrulated, Flowers racemose, Calyx spherical 5-toothed
16984 Stem suffrut simple glabr. Lvs lin-lanc serrul quite glabr both surfs Pedic axill shorter than lvs.
16985 Stem villous, Lvs sess ovate-oblong serrul mucron downy glauc Raceme short leafy, Cor downy
16986 Lvs. ov-lan mucron sharply serrat quite glabr Racemes term leafy, Tube of cor little long. than cal 2 lower anth beard

16987 Lvs. lan. acumin unequally serrated attenuated at base, Flowers axillary solitary pedunculate

16988 Lvs obovate-lanceol acumin coarsely toothed glabrous shining, Rac termin simple secund



16989 Glabrous, Lvs lanceol. acumin erosely toothed, Raceme leafy, Peduncles naked, Segms of cal linear subulate
16990 Stem short decumb at base densely leafy, Lvs lanc dentately pinnatifi downy atten at base, Pedun term very long Segms of cor. long th lvs. [subul little toothed spread
16991 Lvs. sess lanceol decur. sharply serrat glabr Pedic axill solit long th lvs. Rac termin leafy, Cal segms.
16992 Lvs. 5-6 in long lanceol much acumin closely and acutely serrated

[cuneat Filam glabrous
16993 Flws axill solit bractless droop Cor bilabiate glabr upper lip of cor rounded ent lower tripart segms
16994 Flws axill and term bractless somewh. droop. Cor bilab downy outside, upper lip 2-lobed, lower tripart. Segms oblate

16995 Lvs undivided villous beneath as are scapes hairy spread Cal segms longitud. feathered apex somewhat acute

16996 Whorls capit Lvs oval acute both ends petiol glabr ciliat toment on outside upper ones connate

16998 Flws in verticil heads, Cor glabr with elongated gibbous tube, Lvs oval almost sess glabr ciliat. glauc.
16999 Spikes approx vertic heads of nearly sess flws Tube of cor hairy ventric in middle, Lvs coriac retic ov. on short ped glauc ben ciliat
17000 Glabrous, Lvs petiol obl-lanc shining above pale ben Pedun short 2-flwd Tube of cor very long filiform
17001 Hispid-pilose, Umbels pedunculate, Lvs petiolate cordate ovate obtuse underneath glaucous

17002 The only species

and Miscellaneous Particulars.

2538 *Siphocampylos.* The sp of this genus have all large, showy, scarlet, or red flowers, and well deserve a place in every stove They are of easy culture A mixture of loam, sand, and peat soil suits them best, in which cuttings strike readily under a hand-glass in heat

2539. *Lechenaultia* Elegant plants when in blossom A mixture of turfy loam, peat, and sand suits them best, and cuttings of the young wood root freely in the same kind of soil under a hand-glass.

2540. *Brunsvia* Culture and propagation as for Scævola in p 169.

2541. *Leycesteria.* This is a beautiful shrub when in a flowering state, from the contrast between the deep green hue of its stem and lvs. and the reddish purple of its large bracteas and berries. It is easily propagated by cuttings, or by seeds, which it produces in abundance.

History, Use, Propagation, Culture

2542. Lucùlia *gratissima* It is impossible to conceive any thing more beautiful than this tree, when covered with its numerous cymes of fragrant flowers. A good rich light soil suits it best; and cuttings may, though with great difficulty, be rooted in sand, under a hand-glass

2543 *Uncaria* Gámbier Gambier is the Malay name of an extract prepared from the leaves of this plant, and one of the drugs, if not the only one, formerly called *Terra Japonica* in Europe It is chewed by the natives, mingled with betel leaf and areca, after the manner in which the cutch is used on the continent of India. (*Don's Mill*)

2544. *Colletia* A mixture of loam and peat appears to suit the plants of the genus best, and cuttings of the young wood will root freely in sand, under a hand-glass

2545. Retanilla Propagation, culture, &c., as for Collètia.

2546 *Trevoa*. For propagation, culture, &c, see Collètia.

17003 The only species.

17004 Lvs. ov-obl acute on short pet. smooth both surfs Stips. ovate, Pedun axill. solit. oppos , Bracteol in middle · lower sterile convert. int hooked spines

and Miscellaneous Particulars

17067 *Heracleum giganteum*, when growing on deep loamy soil, and liberally supplied with water when it is sending up its flower stalk will attain the height of 12 to 15 feet.

2571 *Haylòckia* Perianth cylindrical, with a widened throat and a half-spreading limb. Stamens conniving. Stigmas 3, recurved at ends Capsules 3-gonal

2572 *Cunninghàmia* Perianth campanulate, 6-cleft, deciduous alternate Segments ciliated Anthers emarginate at the base, conniving. Stigma prunose dot Capsule 3-celled, few-seeded

2573 *Fúnkia* Perianth funnel-shaped, deciduous. Stamens and styles declinate Stigma clavate, 3-gonal Capsule 3-celled, many seeded Seeds disposed in two rows in each cell, winged at end

2574 *Cyclobóthra*. Flowers drooping Sepals glabrous, petals bearded, with a nectary, hollow in the middle Capsule 3-winged Seeds in single rows

2575 *Rhinopétalum* Perianth 6-leaved, deciduous, each leaf furnished with a naked nectariferous hollow at the base, upper one horned on the back Filaments bearded Ovarium 3-gonal, 3-celled, many-seeded.

2576 *Charlwoódia*. Perianth 3-parted Filaments thickened in the middle Stigma 3-cleft. Ovarium 3-celled

2577 *Calliprora* Perianth campanulate, 6-parted Filaments petaloid, 2-lobed Anthers sessile between the lobes Ovarium stipitate, 3-celled many-seeded Stigma 3-lobed Capsule 3-winged

2578 *Laxmánnia*. Corolla 6-parted, persistent Filaments subulate, smooth, inserted in the base of corolla. Anther peltate Capsule 3-celled Seeds sub-solitary, peltate

2579 *Barnardia*. Perianth 6-parted, spreading, persistent. Stamens dilated at base. Ovarium 3-celled, 3-seeded Stigma simple

2580 *Daubènya*. Inflorescence umbellate, sessile Perianth tubular. Limb bilabiate Upper lip short, 3-dentate, lower one tripartite Ovarium 3 celled

2581 Camássia. Perianth spreading, 6 lvd, upper leaf ascending, lower one deflexed. Stamens equal ascending Ovarium 3-celled, many seeded. Stigma 3-toothed Seed 6 in each cell

2582. *Trichopétalum* Calyx recurved. Petals bearded along the margins Stamens equal Stigma 3-angular Capsule 3-celled, many-seeded Seeds reniform.

2583 *Stypándra* Perianth 6-parted, spreading, deciduous Filaments curved, bearded, and swollen at top Stigma simple Capsule 3-celled, few-seeded

2584 *Tricoryne*. Perianth 6-parted, spreading, deciduous. Stamens bearded Ovarium tripartite, lobes 2-seeded. Stigma simple Pericarps 3, clavate, 1-seeded

2585. *Hessèa* Sepals 6, recurved. Style trigonal. Stigma sessile, 3-lobed, papillose Capsule 3-winged, 3-celled, many-seeded. Seeds winged.

2586 *Gethonoplèsium.* Perianth 6-parted, spreading, deciduous. Filaments curved at apex. Anthers sagittate, conniving, longer than the filaments Style 3-sulcate. Stigma simple Berry few-seeded Seeds nearly globose.

2587 *Mahònia* Sepals 6, guarded on the outside by 3 scales. Petals 6, without glands on the inside. Stamens furnished with a tooth on each side at top of the filament. Berries 3-9-seeded.

2588. *Schrádera* Cal with ovate tube, and short truncate or sub-denticulated limb Cor funnel-sh., tube terete. Anth. 5 8 sess lin inserted into throat of cor., hardly exserted. Style short, bifid. Berries pea-sh., 3-4-sided, 2-4-celled Cells many-seeded. Seeds minute.

History, Use, Propagation, Culture,

17088. *Anigozánthus Manglèsii* is a singularly beautiful plant, for which, and for a number of other plants of rarity and beauty, the public is indebted to Robert Mangles, Esq , of Whitmore Lodge, Berks.

2589. *Stephània.* Cal. 2-lobed. Petals 4. Torus small. Ovarium stipitate, oblong.

Order 3. TRIGYNIA. 6 Stamens. 3 Styles.

2590. *Calochórtus.* Calyx 3-lvd. Petals 3, bearded inside. Stigmas petaloid. Capsule 3-valved, 3-gonal. Seeds flat, inserted by single rows.

2591. Merendèra. Perianth funnel-shaped, of 6 sepals. Petals on very long claws. Stamens inserted in the petals above the claws

2592. *Livistònia* Perianth double, both tripartite Ovaria 3. Styles 3, combined. Stigma undivided. Berry 1-seeded.

MONOGYNIA.

[crou tapering very much to base

17075 Perian petal-lk. tube bluntly tetragon thick, Segms spreadg. like star quite distinct at base, cuneat.-obov. mu-
17076 Scape slender 4-flwd Segms perian. obov. mucronate somewhat reflexed twice as long as the cup-shaped truncate yel corona

17077 Corona plicate repand longer than the segms. Style longer than the corona, Leafs erect, Scape compressed
17078 Lvs. lorately linear channelled on upper side keeled at back, Crown cylindr curled 6-lobd. Lbs. round entire, Segms. of perian obhq ovate

17079 Segms perian. ovate spreading, Corona funnel-shaped length of segms. Limb spreading deeply crenated
17080 Lvs 9-10 in long erect little spreadg glauc striat. and keeled at back upper side somewh. concave margin thickened, Segs of perian ov or obov -lanceol cup 2½ in long

17081 Lvs. expanded into a wing above the base, Wing plaited

[linear-lanceol. 6, Corona spreading rotate closely toothed

17082 Lvs. 8 or 10 linear-oblong striated, Scape 2-edged 10-12-flwd. longer than lvs. Spathe lanceolate Segms of perian
17083 Perian yellowish marked with green, Tube slender, Limb and Style exceeding the Corona, Ovarium pedicellate

17084 Glaucous, Scape 3-flwd. Tube long green, Limb white, Corona white rotate with a jagged border

17085 Lvs. glaucous acutish, Scape compressed green, Stamens enclosed

17086 Lvs. oblong-cord Umbel 6-flwd. Segms. of perianth obl -lanceol. Lateral teeth of filament very much elongat. and sometimes 2-lbd.

[into cylind.-campan limb

17087 Scape terete bearing umbel of about 7 flws. Spathe of 2 membranac. lvs. Perian. cylindric gradually widening

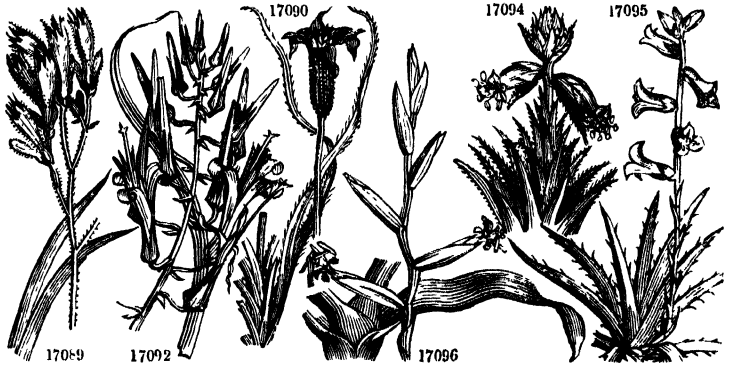
17088 Stem erect clthd with short thick crimson persistent velvety down, Flws. in short termin. spiked raceme, Stigma capit project beyond tube
17089 Deep green, Flws. panicled, Perianth swelling towards the summit hairy, Segms a little reflexed

17090 Lvs. linear keeled with spiny serratures, Ovarium elongated tuberculated

[straight 1-sided long. th. stam

17091 Lvs lanceol very ent. acumin. glauc. and woolly ben. Pedic. shorter th. brac quite smooth as is cal Petals
17092 Lvs lin -lanceol very entire smooth acumin. ¼ in broad, Stem simple, Segms of cor revol white, Stigma 3-fid white

[and rachis pubes Brac much long th pedic



17093 Raceme many-flwd. elongat Petals oblong-lanceol. obtuse twisted to one side concave with galeat spur, Cal

17094 Lvs lanceol -linear elongated ciliato-spinulose furfuraceous beneath, Racemes panicled villous

17096 The only species

[remote, Brac ab eq to flws.

17096 Lvs lin -ligul ent invol at base, towards extrem plane recurved acute, Spike simple, Rachis zigzag, Flws
17097 Lvs oblongo-lanceol accuminated undulated recurved, Flowers aggregate sessile
17098 Lvs. ligulate acumin furfuraceous, Spike ovate solitary scarcely higher th. lvs Brac ovate concave bright pink

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

772. Tùlipa. It appears to us highly probable that the greater number, and indeed perhaps the whole, of the above names, are only varieties.

[prunnose ent. Pedun 2-flwd.
17127 Lvs spathul. about 7-nerved central rib hardly promin behind in upper half reflect at point and sides glauco
17128 Erect, Lvs lin -lanceol twisted margins ciliated, Pedunc branc umbellate, Perianth 6-lvd 3 outer ones ovato-
17129 Stem erect, Lvs. lanceol obtuse obsoletely denticulated, Umbels many-flwd. Pedunc. angular [lanceol. serrated

17130 Limb of the perian longer than tube with 3 blk spots in the centre

[Sheaths ciliat on margins
17131 Stem erect simple or bran rounded glabr jointed, Lvs lin -acuminated glabr striated sheathing at base,
17132 Stem dichotom bran and jointed lower part glabr upper densely hairy, Lvs scarcely sheath lanceol wavy striat lower downy, upper densely hairy
[wider in proportion
17133 Lvs all radic ov. acumin striat Bracteas lanceol lower ones longer th flws upper one gradually smaller and
17134 Lvs. lanceol nerved, Corolla campanulate [flwd Brac ov twice as long as pedic.
17135 Lvs all radic. petiol. ov -lanceol very acute elegantly margined with white, Petiol longer th. lvs. Rac 12-14

17136 Stem glabrous, Leaves scattered lanceolate 3 nerved attenuated at both ends, Corolla tubularly campanulate
[volute papillosely bearded
17137 Stem erect smooth, Lvs. scattered ovato-obl nerved petiol Bran 1-flwd Flws. drooping reflexed, Cor. re-

17138 Lvs very narrow linear scattered, Perianth smooth revolute, Capsule turbinate

[Lflts. ov flat acute
17139 Stem leafy 1-flwd Lower lvs. obl -lanceol channeled acumin undul. glauc Upper ones lin flat, Perian oval
17140 Stem 1-flwd glabrous, Flws erect, Petals ovate lanceol acuminated bearded at the apex, Lvs. ovate lanceol. ciliate, Bulbs woolly
17141 Stem pubescent 1-flwd 3 outer petals acute 3 inner ones obtuse and mucronate, Lvs obl. lanceolate pubescent
17142 Stem pubescent longer than that on lvs Perianth campanulately spread Segms ellipt -lanceol acute bearded at apex margin involute
[Filam. subulate
17143 Lvs lin -lanceol subconvolute glauc Petals lanceol obtuse very spreading 3 outer ones longest, Stam. equal
17144 Scape pubescent scabrous, Lvs flaccid, Segms of perian. acumin Stem 1-flwd

[acute glab inner ones blunt ciliated
17145 Glaucous, Stem few-flwd Lvs channeled acuminated upper ones dilated at the base, Outer segms of perianth
17146 Stem 3 flowered one-leaved, Inner petals woolly

[ovate-lanceol acumin
17147 Umbel 2-3-flwd. Pedun shorter than bract Petals ovate obtuse serrulato-fimbriate, Flws globose, Sepals
17148 Umbel 2-3-flwd Pedun shorter than bract Petals ovate very obtuse margin naked, Sepals ovate-lanceol. half length of petals

17149 Lvs lanceol subconvolute, Flws terminal solitary

17150 Stem upright simple densely leafy, Lvs lin -lanceol cuspid recurv. patent ent. Rac. terminal many-flwd.

17151 Stem arborescent, Lvs. attenuated at both ends, Branches of panicle divaricate, Flws nearly sessile

[3-parted
17152 Lvs obl -lanceol subcomplic obtuse, Segms. of perian ovate-lanceol. acumin reflex nearly from base, Stigma
17153 Lvs obl or lanceol. Scape irregularly bran. 5-flwd. Segms. of perian. acumin. reflex from middle, Stigma 3-lobed

17154 Habit of *Allium*

17155 The only species

17156 Lvs broad linear longer than the scape, Bracteas equal in length to pedicels, Flowers disposed in a large sub-conical corymb Perian spreading persistent
[few-flwd Caps rotate
17157 Lvs lanceol. flat very smooth and densely ciliated (edged with broken cartilaginous margin *Lindl.*), Corymbs
17158 Scape 5-angled, Racemes 3-flwd Pedunc drooping, Cor campanulate patent, Bracteas very short
17159 Lvs. lanceolate sparingly villous, Racemes corymbose 5-7-flwd. Bracteas lanceol equal to peduncles

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2581. **Camássia** 17162 *esculénta* "This plant is known by the natives under the name of *Quamash*; and the bulbs are carefully collected by them, and baked between hot stones, when they assume the appearance of baked pears, and are of an agreeable sweet taste. They form a great part of their winter stores. Though an agreeable food to Governor Lewis's party, they occasioned bowel complaints if eaten in any quantity. It is perfectly hardy, requiring to be planted in a peat border, and may be propagated either by seeds or bulbs. (*Pursh*.)

2585. *Herrèria*. A singular, but desirable, hot-house climber, growing freely in any good soil

2587. *Mahònia*. "The species are elegant evergreen shrubs, with yellow flowers and pinnate leaves. The latter

[Segms obl.-concave narrowed at base
17160 Lvs. weak lin. channel. cuspid. rather angul. extern. Scape erect 6-angled, Rac. simple conic. Perian. 6-leaved,

17184 Lvs obl.-lanceol acuminated scarcely longer than pedicels

and Miscellaneous Particulars

resemble pretty much those of the ash, and hence doubtless, the name of Ash-berberry. Natives of the N W. coast of Amer, and also of Nepal, and perhaps Japan. Though some botanists think that the characters ascribed to this genus, and those ascribed to *Bérberis*, are not sufficient to keep them separate as genera; yet the habits of the species of one, as to the mode of growth, foliage, and inflorescence, are so distinct from those of the other, as to induce us to adopt Mahónia. The species in British gardens are all of comparatively slow growth, and admit of but slow multiplication by layers, and scarcely at all by cuttings. Some of them, however, seed freely, and are readily propagated in that way" (*Arb Brit* vol. ii. p 309)

History, Use, Propagation, Culture,

875. *Tropæ'olum* 17199 *tuberósum* This species may be considered about as hardy as the potato, and, like it produces eatable and agreeably flavoured tubers. Mr Lambert was the first, we believe, who grew these tubers in England, and presented them at table When boiled, the tubers are of a soft pulpy substance, and, Mr. Cameron says, in flavour resemble sea-kale, mixed with the hot taste of garden cress. The council of the Caledon. Hort. Soc considers the tubers to be of a very delicate flavour, resembling the richest asparagus Mr. Young of Epsom found the

MONOGYNIA.

[quite entire
17195 Leaflets 5-10 obl or obovate little-toothed cuneated at base, Petals unguicul rather longer than cal obtuse

History, Use, Propagation, Culture,

2596. *Godètia*. A genus of highly ornamental plants, separated by Spach from the genus Œnothèra. It contains all the species with purple flowers, which Dr Lindley informs us will not mix with the yellow-flowered kinds, so as to form hybrids; neither do they close their petals in the sunshine, and thus forfeit all title to the name of Evening Primrose. Culture, &c., same as recommended for Œnothèra.

2597 *Clárkia*. A genus of very ornamental annuals, requiring the same treatment as that of the annual Œnothèra

17234 Procumb Lvs pubes altern interruptedly pinnatif sinuately toothed ent. at apex, Tube of cor. very long Petals large obov. ent 5-nrvd

17263 Caulescent, Lvs petiolate, Rac spirate erect Cal segms lanceol obtuse nerveless

and Miscellaneous Particulars

2598. *Eucharidium.* A pretty and very neat little plant, seeds of which may be sown at any period of the spring or summer, as they will generally flower in about six weeks after sowing.

2599. *Francoa.* A genus of ornamental perennials, which are, however, found to be most useful if treated as half-hardy annuals, because, as perennials, they are too tender to endure the winter in the open air without protection. Besides this, they can only be propagated by seeds.

Order 1. MONOGYNIA 10 Stamens 1 Style

2601 *Castanospérmum* Calyx somewhat bilabiate, with short tube; upper lip bifid, lower one 3-fid. Petals 5, papilionaceous, with wings and keel nearly equal in length. Legume stipitate, large, oblong-cylindrical, 2-valved, usually 4-seeded. Valves coriaceous, spongy inside

2602 *Richárdia* Sepals 5, joined into campanulate crenulated calyx Petals 6-10, somewhat papilionaceous Stam declinate, distinct, cohering together beneath middle by beard. Style filiform Stigma dilated. Legume samaroid, ending in oblong wing

2603 *Erwstemon* Calyx 5-parted Petals 5, marcescent Stamens unequal, free, fringed, tapering into a thread which bears the anthers. Fruit of 5, rarely 1-2, carpels

2604 *Phebâlium* Calyx 5-cleft Petals 5 Stamens unequal, smooth. Style and stigma 5-furrowed. Fruit of 5 capsular, 2-valved, 1-seeded carpels, girded by calyx

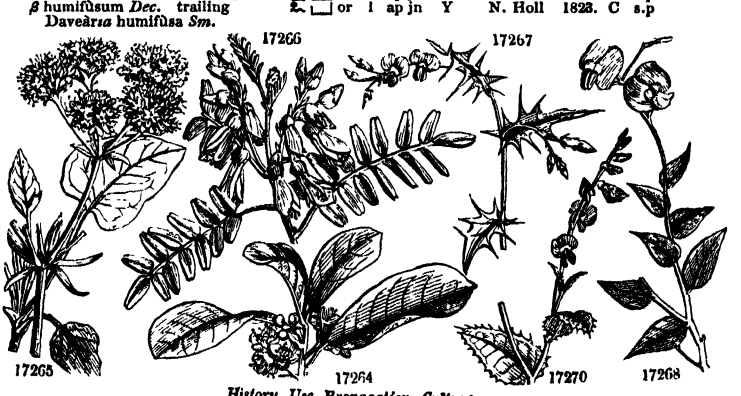
2605 *Pieris* Calyx 5 parted Corolla tubular or ovate, with a contracted, 5-toothed, revolute mouth. Filaments dilated, furnished with two bristles at the tip Anthers with short incumbent cells that open lengthwise. Style 5-cornered Stigma truncate Leaves coriaceous Flowers drooping, terminal, racemose

2606 *Pernettya* Corolla globose, with a revolute limb Anthers with the 2-cells 2-lobed at the tip; the lobes bifid Hypogynous scales 10, 3-lobed, surrounding the ovary. Berry with 5 cells, the dehiscence loculicidal

2607 *Lamánthes.* Calyx 5-parted. Petals 5 Stamens 10 Nuculæ 5

2608 *Chætogástra* Calyx turbinate, pilose or scaly, 5-lobed Petals 5 Filam 10, glabrous. Anthers oblong, having connectives drawn out into simple or bifid spur, and sometimes only into 2 blunt tubercles. Ovarium bristly at apex Capsules 5-celled.

2609. *Ceratopétalum* Limb of calyx 5-parted, permanent Petals 5, linearly multifid, permanent or wanting Anthers beaked Capsule 1-seeded from abortion, dehiscing at apex Leaves simple or ternate.



2610. *Darwinia* Tube of calyx drawn out into membranous deciduous limb, throat dilated. Lobes roundish, cordate Stamens free. Ovarium 1-celled, 1-ovulate.

Order 2 DIGYNIA 10 Stamens 2 Styles

2611. *Pachynèma* Stamens 7 or 10, free Filaments broad and thick at base Ovaries 2 Styles awl-shaped Sepals and petals 5, but the petals soon fall off
2612 *Iddàmia* Limb of calyx with 5 short teeth Petals 5 Styles ending in rather club-sh 2-lobed stigmas. Berry crowned by teeth of calyx, somewat 5-celled, many seeded
2613 *Tillima* Free part of calyx inflated, 5-toothed, the adhering part conical Petals 5, jagged Styles 2-3, distinct Capsule 1-celled, 2-valved at apex.

Order 3 TRIGYNIA. 10 Stamens 3 Styles

2614 *Stigmaphýllum* Calyx 5-parted, 4 of the segments biglandular at the base Petals unequal. Stamens unequal Styles flortaceous at apex Samar usually 3, one-seeded, winged at end
2615 *Thyàllis* Petals roundish, unguiculate Stamens awl-shaped Caps. triquetrous, separable into 3 parts, cells opening by outer angles
2616 *Galphimia* Calyx glandless Petals unguiculate Stamens nearly free Drupe containing 3 1-seeded nuts, which open on the back
2617 *Dcidæia* Calyx 5-cleft. Petals 5 Filaments flattened, tridentate at apex, middle tooth bearing the anther. Capsule 3-4-celled

Order 5 PENTAGYNIA 10 Stamens 5 Styles.

2618 *Echevèria* Cal 5-parted Sepals erect, reterable to leaves, united at very base, erect, thick stiffish, thickest at middle nerve, and nearly 3-gonal at base, acute Stamens shorter than petals, adnate to them at base. Carpels 5, ending each in subulate style
2619 *Balbísia* Calyx 5-leaved, involucrated by 10 lineal bracteas Petals spreading, obtuse Stigma 5-lobed, sessile Capsule 5-lobed, many-seeded Seeds compressed
2620 *Viscaria.* Calyx cylindrical, 5-toothed, naked. Petals 5, unguiculate, scales in the throat Capsule 5-celled.

MONOGYNIA.

17266 Lvs. 13-19 elliptic obl obtuse silky beneath, Upper petal length of the lateral ones, Legume 2-jointed wingless

17267 Lvs subhastate pinnatifidly spinous, Pedicels with bracteæ at base
17268 Stems weak ascending, Lvs ovate acute, Peduncles long terminal naked 3-flwd
17269 Plant hoary, Lvs acicular, Flowers axillary
17270 Lvs sessile cordate obtuse spiny-toothed, Flowers racemose drooping, Calyx pubescent

17271 Leaves opposite trifid, Lobes about equal entire spiny at apex, Ovary smooth
17272 Leaves opposite oblong-elliptic quite entire mucronate, Ovary villous

and Miscellaneous Particulars.

949 *Chorózema* All the species are small shrubs, profusely covered with beautiful flowers, one of the handsomest is C. Henchmánnii, which grows freely in sandy peat

History, Use, Propagation, Culture,

2601 *Castanospérmum* The seeds are eaten by the natives about Moreton Bay on all occasions, and, when roasted, have somewhat the flavour of Spanish chestnuts; and even Europeans, who have subsisted on them for two or three days together, have found no bad effects from them when roasted. For culture and propagation, see *Cerà tònia*

977. *Poincià*na 17282 *règia* is a magnificent tree, no less remarkable for its extreme beauty than for its rarity, having been found only in Madagascar, near Foul Point, where it is known by the name of *Tanahou.*

17281 *Gillièsii* The flowers of this species have a disagreeable smell, and are considered by the common people of Chile to be injurious to the sight, hence the vernacular name *mal de ozos* The shrub will not grow unless in irrigated places. (*Don's Mill* v 2 p 433.)

2602 *Reichárdia.* Culture and propagation the same as for Poincià*na*

2603 *Eriostèmon.* A genus of beautiful shrubs with pink flowers, which deserve a place in every collection of green-house shrubs They require the same treatment as Phebàlium

2604. *Phebàlium* An equal mixture of loam and peat suits this genus of plants, but care must be taken not to overwater them, or crowd them amongst other plants Cuttings root freely in sand under a bell-glass, without heat

1014. *Rhododéndron* ' Under this genus, Professor D Don has included the Azalea, which, however technically correct, appears to us injudicious in a practical point of view; and though we have followed his arrangement in this article, yet we have indicated two sections, containing the Indian or tender, and the Asiatic and American, or hardy, azaleas, which those who cultivate extensive collections of these shrubs may, if they choose, consider as constituting the genus Azàlea as heretofore Such persons, therefore, may view the genus Azàlea as remaining exactly as it is in

17273 Leaves simple very crowded linear subulate with revolute margins smooth as are branches

and Miscellaneous Particulars

our *Hortus Britannicus.*" (*Arb Brit.* vol ii p 1130.) "Of all the genera in existence," G. Don observes, "*Rhododéndron*" (under which he includes the Azàlea) "comprises the most handsome, elegant, and showy shrubs for adorning shrubberies or planting singly on lawns." Though in Britain these plants are solely cultivated as ornamental, yet, in their native countries, they are not without their other uses "The *Rhodòreæ*," Mr. Royle observes, abound in stimulant, and even deleterious, properties Thus *Rhododéndron pónticum*, *R máximum*, *R. ferrugineum*, and *R. chrysánthum*, are poisonous to cattle which feed on them; and yet, in moderate doses, are used in medicine, for the cure of rheumatism, &c. Azàlea procúmbens *L.* and *Lèdum palústre* are accounted diuretic, and *L. latifòlium*, being more stimulant, is used as a tea, under the name of Labrador tea, but determines to the head. *Kálmia latifòlia* is accounted poisonous, and honey collected by bees from its flowers is of a deleterious nature, as is that of Azàlea pôntica, which was so injurious to the soldiers in the retreat of the Ten Thousand. In the Himalayan species, *R arbòreum* is more remarkable for its use as a timber tree than the other species. The flowers are eaten by the hill people, and formed into a jelly by European visiters. The leaves of *R. campanulàtum*, being used as a snuff by the natives of India, are imported from Cashmere, under the names of *koolas-kasmeeree* (Cashmere snuff) and *burg-i-tibbut* (Thibet leaf), though easily procurable within the British territories. It is remarkable that De Candolle mentions the employment in the United States, for a similar purpose, of the brown dust which adheres to the petioles of kalmias and rhododendrons The leaves of *R* lepidòtum (a species not yet introduced into Europe) are highly fragrant, and of a stimulant nature." (*Royle Ill.* 219.) Culture, propagation, and other particulars, see p 144 and p 398, 350

History, Use, Propagation, Culture,

2608. ***Chætogastra.*** The species require a mixture of loam, peat, and sand, and young cuttings root readily in heat, under a hand-glass.

2609. ***Ceratopétalum.*** A mixture of peat and loam suits this plant, and ripened cuttings root readily in sand, under a hand-glass.

2610. ***Darwínia.*** Singular plants, requiring to be grown in a mixture of loam, peat, and sand; and young cuttings root readily in sand, under a hand-glass.

2611. ***Pachynèma.*** This shrub thrives well in a mixture of loam and peat, and cuttings root freely in sand, under a hand-glass

2612. ***Adámia.*** This shrub requires a mixture of loam, peat, and sand, and cuttings root readily in the same kind of soil, under a hand-glass It is called *Bansook* by the natives.

[nrvd villous both surfs Pedur trichot.
17300 Stem somewh 4-gonal clothed with adpressed villi, Lvs. petiol broad lanceol. acumin serrulately ciliated 5-
17301 Erect nearly simple, Stem 4-gonally terete villous, Lvs. almost sess lanceol.-lin. acute quite ent. 3-5-nrvd villous, Pedic axill. 1-flwd

17302 Leaves ternate, Flowers with petals

17303 Leaves acerose, Receptacle chaffy, Style 3 times length of flowers, Calyx red

DIGYNIA.

17304 A little leafless shrub with the habit of *Ephedra*. The only species

17305 The only species

17306 Lvs cordate lobed dentately serrated, Racemes elongated, Petals oblong-linear pinnatifidly jagged

17307 Lvs ovate acute serrat pilose, Racemes termin tomentose rather compound at the base, Flws usually trigynous
17308 Stem erect dichotom branched, Lvs obovate spatulate nrly sessile ciliat on margins, Flws. axill. solitary

17309 Flws aggreg sess Cal scales broad mucronate with membranaceous margins longer than tube, Lvs lanceol many-nerved [lin very long connate at base
17310 Flws numerous sess in hemispherical heads leafy bracts at base, Cal scales ov acumin pressed to cal Lvs
17311 Stem erect, Flws rather aggregate, Calycine scales ovate acuminated divaricating shorter than tube, Petals multifid bearded, Lvs lanceol

TRIGYNIA.

17312 Lvs glabr sagittately hastate angular acute, Hind lobes truncate margined horned, Petiole biglandular at apex

17313 Lvs ovate lanceol glauc green above white ben Racemes short panicled, Petioles biglandul at apex

17314 Lvs ovate obtuse smooth glaucous beneath 1 tooth on each side at base, Petioles without glands

17315 Lvs ovate acute sharply serrated pilose, Rac terminal tomentose, Flowers usually trigynous

PENTAGYNIA.

17316 Lvs orbicularly cuneated, Petiole thick, Flws in spicate panicles
17317 Lvs flat cuneiform acutely mucron crowded at tops of branches, Pedic. spreadg Flws. on short pedic along bran of panicle

[compound, Petals lanceol acute little long th. stams
17318 Lvs oppos. obsoletely denticul. adnate inferior ones broadly ellipt superior sess cord. Corymbs termin
17319 Lvs opposite orbiculate denticulate [obtuse
17320 Stem flat on ground at base ascending, Lvs obl altern obt loosened at base, Cymes bifid glabrous, Petals 7

17321 Stem erect leafy, Pedun umbelliferous 5-6-flwd longer than lvs. Leaflets obovate, Petals crenated
17322 Stem erect branched, Pedun long, Flws subumbellate drooping before expansion, Leaflets 3 obcordate sessile

and Miscellaneous Particulars.

2614 *Stigmaphýllum* A handsome climber, propagated by cuttings
2615 *Thryallis* A mixture of loam and peat will suit this plant, and ripened cuttings will root in sand under a hand-glass, in heat
2616 *Galphimia*. A genus of rather handsome shrubs, requiring the same treatment as *Thryállis*.
2617 *Deutzia*. A very showy free-flowering shrub, which deserves a place in every collection It is readily propagated by cuttings or layers According to Kæmpfer, the wood is used by the cabinetmakers in Japan for making their very finest pegs, for which its hardness and toughness render it well adapted.
2618 *Echeveria* Culture, propagation, &c., see Crássula, in p 230.
1065. *Oxalis* 17321 *crenata*. "The tubers of this plant are produced in considerable plenty, and are often 2 in long, and 1 in in diameter. When raw, they are slightly subacid, but on being boiled they lose it entirely, and taste

History, Use, Propagation, Culture

very much like the potato, for which they might form occasionally an agreeable substitute at table. It is a native of Peru, and is cultivated abundantly in the gardens about Lima, as a salad, for which purpose its succulent stems and acid flavour, seem strongly to recommend it. It grows freely in the open border, and is readily increased by cuttings, as well as by the tubers, which require to be taken up and treated as potatoes." (*Sw. Fl. Gar.*, 2. s. 125.)

2619. *Balbísia*. A showy conservatory plant, which may be increased by cuttings, but is apt to damp off; if kept in health, it is very handsome.

17323 Stem erect fleshy leafy, Pedun bifid corymbosely racem. at apex 4 times longer th. lvs. Lflts obcord Petals crenated at apex [very long
17324 Stem decumb bran Leaflts lin sess acute, Pedun much higher than lvs Bract approaching cal. Styles
17325 Hairy nearly stemless, Scape 1-flwd. drooping before expansion, Leaflets 3 obcordate
17326 Stem fleshy scaly, Leaflts lin obt pilose beneath, Flws umbellate, Pedicels and petioles twisted fleshy
17327 Stemless, Scapes 2-3-flwd Leaflts. 3 obcordate [lvs with 2 bracts ab middle

History, Use, Propagation, Culture,

2631. *Purshia*. A dry light soil suits this plant, and cuttings of the young wood will root in sand under a hand glass.

17361 Globose subcylindrical, Mammillæ lrge conical obtuse, Spines 14—16 strong straight nearly equal, Petals very unequal [acuminate

17362 Oblong subcylindrical, Mammillæ lrge. subtetragonal, Spines 7—8 straight slender one longer than rest, Petals

17363 Branches diffuse creeping triangular, Spines 4—5 stiff spreading.

17364 Hybrid between C. speciosissimus and C flabelliformis [linear obtuse

17365 Stems creeping triangular, Spines numerous bristle-shaped, Flowers solitary from the centre of the bristles, Petals

17366 Branches deeply serrated naked, Tube of flower very long slender, Segms. of cor. lin. lanceol

17367 Stem serrated repand, Tube of cor short scaly unarmed

[Petals keeled

17368 Branches seldom with any spines except when young, Cor large ringent nearly four times longer than tube,

17369 Branches cuneate oblong undulated, Margins appearing curled from large crenatures

6884 Proliferous loose, Joints ovate, Spines setaceous

17370 Joints ovate oblong blunt at both ends, Spines setaceous length of the wool

6904 Lvs ellipt Prickles solitary in axils of lvs fascicled on stems, Flowers panicled, Fruit globose

17371 Lvs ellipt acute tapering into short footstalks, Spines fascicled, Upper axils bearing thick rounded fleshy 3-5-flwd. peduncs, Petals obov retuse soon reflected

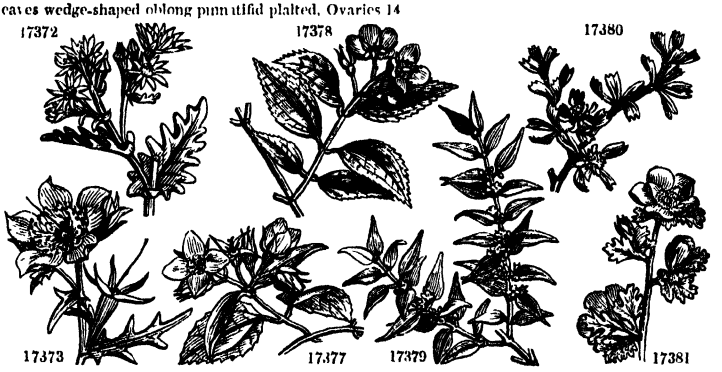
17372 Stem with white shining epidermis, Lvs sinuately toothed, Capsule naked 3-valved, Seed broadly marginate, Flws in leafy panic

17373 Stem branched hispid, Lvs ovate lanceol pinnatifid, Bract pinnatifid, Petals 5 obovate cuspidate

17374 Lvs ov acumin serrately denticul rounded at the base 3-nerved, Flws fewer and larger than in *P.* vulgàris and scentless [minate

17375 Bark whitish, Lvs broad-ovate acumin toothed about 5-nrvd hairy ben Inflor racemose, Lobes of cal acu-

17376 Lvs ovate-oval with long acuminate tip serrat toothed 3-nrvd hairy ben Inflor subracemose, Flws 5-7 showy slightly scented [level with stamens



17377 Lvs oval-ovate with long acuminate tip toothed pubes ben Flws solitary or 2-3 together, Stigmas about

17378 Lvs ovate acuminated denticulated toment ben Racemes termin, Pedicels oppos Lobes of cal ovate acute

17379 Peduncles angular short usually solitary, Lvs ovate lanceol acum Calyx hairy 4-cleft, Petals hairy outside

17380 Subdecumbent, Lvs. grouped wedge-sh ending in 2-3 teeth villose ab toment ben Buds scaly, Stipules none or minute

1738 Leaves wedge-shaped oblong pinnatifid plaited, Ovaries 14

and Miscellaneous Particulars.

2632 *Cowánia.* A handsome evergreen hardy shrub, with large showy blossoms resembling a small rose.

History, Use, Propagation, Culture,

2635. *Rydnea* 17442 *speciòsa* is a beautiful and singular plant, deserving a place in every stove Ripened cuttings root freely in sand, under a bell-glass, in heat. The plant thrives in vegetable mould with a little sand

2636. *Achlys* 17443 *triphýlla.* This plant succeeds well in common garden soil, and is increased by division of the root

2637. *Hunnemánia.* For culture, &c, see Eschschóltzia, p. 1218.

2643 *Platystèmon* Sepals 3, caducous Petals 6. Stamens numerous. Filaments dilat Membrane cordate. Anthers linear Ovaria numerous, linear, each terminated by a linear sessile stigma. Capsules distinct, torulose, articulated, indehiscent, transversely many-celled, hispid. Seeds pendulous, solitary in the cells

2644. *Platystigma* Sepals 3, ovate, deciduous, hairy. Petals 4-5 Stamens numerous Filaments thread-like. Anthers linear, 2-celled, opening sideways Stig 3, ovate, acute, erect, divergent Caps oblong, attenuated at base, 1-celled 3-furrowed, 3-valved, opening from top to base. Seeds numerous, minute, egg-shaped, black, smooth, shining

2645 *Cálythrix* Calyx drawn out into a cylindrical tube; lobes ending in a long bristle each. Stamens 10-30, free Fruit dry, indehiscent, 1-celled.

Order 2. DI-TRIGYNIA. Stamens many, hypogynous. Styles 2-3.

2646 *Pleurándra.* Stamens 5-20, all leaning to one side, and fertile. Ovaries 2. Styles filiform. Sepals and petals 5

Order 3. TETRAGYNIA. Stamens many, hypogynous Styles four

2647 *Eschschóltzia.* Stamens indefinite Stigmas 4, 2 short and 2 long. Caps. elongated, silique-formed, 2-valved, 1-celled. Cal calyptrate. Recept expanded.

Order 5 POLYGYNIA. Stamens many, hypogynous Styles many.

2648 Talaúma Carpels disposed in spikes, 1-2-seeded, joined together into a strobile-like fruit opening valvately and irregularly on the outside Calyx of 3 sepals

---

MONOGYNIA.

17412 Under surface of the leaves stellately hairy on the ribs, Peduncles 1-flwd.

17413 Lflts with very unequal sides upper side or front coarsely sinuate-toothed or lobed, Lobes blunt finely rayed with nerves

17444 Caps hispid oval, Sepals hairy, Lvs pinnatif. hairy laciniated part often terminating in bristles, Stems bran and leafy [Lbs cut, Lobules termin by a bristle

17445 Caps. hispid obov. obl Sepals bristly, Pedun. radic very long covered with adpressed hairs, Lvs pinnately lbd

17446 Caps smooth ellipt. Sepals hairy, Stem few-flwd. covered with stiff bristles, Lvs somew stem-claspg. glauc sinuately pinnatif. [terminated by a bristle

17447 Caps smooth obov. Sepals rather setose, Stem smooth few-flwd. Lvs stem-claspg glauc toothed each tooth

17448 Caps smooth obov -obl. Sepals hairy, Stem covered with numer bristly hairs, Lvs sess. hispid sinuately pinnatif Lbs ov and distant

17449 Lvs profoundly sinuat or pinnatif glaucescent, Nrvs. with prickly bristles, Flws solit. Caps. oblong dply. 5-6-furrowed covered with smoothish reflex prickles

17450 Lvs. sinuated smooth spiny-toothed, Nrvs. unarmed, Flws panic polyandr. Caps. bluntly quadrangul almost unarmed

17451 Lvs petiol roundish-ov. obtuse 7-nrvd central one remarkably swollen below, Petioles terete, Pedunc. elongat. 1-flwd Petals twice length of cal. Pistils 6

17452 Leaves decompound triternate glaucous, Lflts. linear bluntish

17453 Lvs obov. shining veiny those of the young plants small and spinosely-toothed those of adult ones larger and quite entire

17454 Leaves in pairs toothed larger one elliptical smaller one roundish, Flws umbellate

17455 Lvs in pairs quite entire larger one obovate smaller one roundish, Flws. in drooping spikes

17456 Flws apetalous, Pedun. axill many-flwd sub-divided, Lvs oblong acute somewhat crenated shining

and Miscellaneous Particulars

2638. *Lùdia.* Shrubs with lateral, almost sessile, flowers, which thrive in a mixture of loam, sand, and peat, and ripened cuttings root freely in sand, under a hand-glass, in heat. The native name of L. heterophýlla is *Bois sans écorce*

2639 *Axàra.* For propagation and culture see Lùdia.

History, Use, Propagation, Culture,

2641 *Godoya* is a genus of elegant trees worth cultivating A mixture of sandy loam and peat suits them, and ripened cuttings root freely in sand, under a hand-glass, in heat
2642. *Dendromècon* Requires some care to keep it through the winter,
2643. *Platystèmon*. Remarkable for the peculiar pale yellowish white colour of its flowers

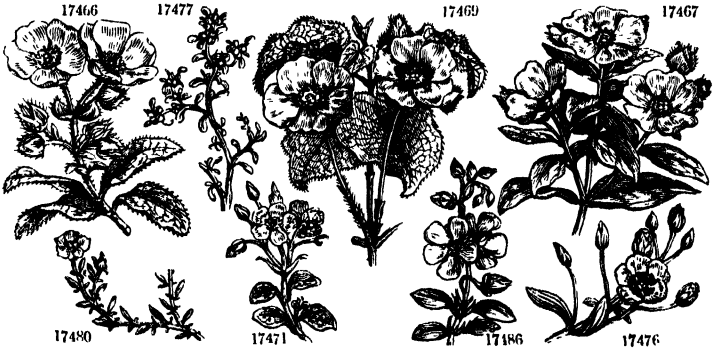
17457 Lvs oblong bluntish obsoletely serrul Racemes axill or termin. compound elongated, Cal of 10 sepals Stamens about 40

17458 The only species

17459 Whole plant hairy spreading, Lvs lanceolate in threes, Scape solit Carpels hairy

17460 Carpels smooth

17461 Stems very short and densely covered with leaves, Lvs linear ent amplexic 1-nrvd. Pedunc. 1-flwd slightly hairy erect



17462 Lvs on short petioles scattered lax patent (less so and more crowd in young bran) tereti-filif acute dotted, Tube of cal. elongat very narrow upwards

17463 Petals obov mucronately acumin longer th cal Stam 30-35, Lvs and flws nearly sessile
17464 Petals oval mucronately cuspidate much longer than cal Stamens 30-40, Flowers and leaves stipitate

[5-celled
17465 Lvs somew 3-nrvd linear margins revolute canes ben Cal 3- -epaled pilose, Sepals ovate acute, Capsules
17466 Erect, Bran hispid vill. Lvs on short footstalks obt -lanceol obl pubes and waved at margins veiny ben Pedunc cymose [rough, Flowers cymose
17467 Lvs alm sess ovate-lanceol acute 3-nrvd wrinkled smthish ciliat netted with veins ben Nrvs and veins
17468 Lvs on short footstalks obl -lanceol 3-nrvd acute undulat somewhat denticul and ciliat rather hairy, Petals broad cuneat imbric [broad cord villose
17469 Lvs broadly cord acute, Margins waved denticul ciliat Pedun bracteate somewhat cymose pilose, Sepals
17470 Lvs narrow-lanceol wrinkled reticul ben almost sess Peduncles villose generally 3-flwd
17471 Lvs broad-ovate twisted at top acutish wrinkled and hoary ben Footst dilat at base somewhat sheathing, Cymes 5 or 10-flowered [acute
17472 Lvs alm ses tapering to base ov-obl obt wrinkled clthd with starry pubes Outer sepals broadly cordate
17473 Lvs stalked cord -ov 3-nrved. reticul veined scabr ab clthd with fascicled hairs ben Margin fringed, Pedun pilose 2 3-flowered

β Lvs pubescent on both surfaces, Branches twiggy diffuse and rather prostrate

[oblique hoary ben
17474 Bran rath hairy clthd with leprous toment scabr brownish grey, Lvs sess tapering to base obov obl rath.
17475 Young bran vill toment hoary, Lvs toment hoary obl -lanc tapering to base, Ped very short 2-flwd Cal 5-sep
17476 Bran leprously white, Lvs obov -lanceol white on both surfs tapering to base pilose ab scabr from papillæ ben Sepals 3 or 5 acute [Racemes axill. or termin many-flowered
17477 Somewhat dichotom bran Bran rather tomentosely cinereous, Lvs lanceol -obl tapering to base hoary ben
17478 Branlts simple hairy, Lvs ovate-obl acute sess hairy, Pedun and cal hairy canescent, Pedun solit 1-flwd inner sepals ovate acumin [canescent nrvd ben furrowed ben
17479 Stem 4-gonal, Bark rough scaly, Bran hispidly hairy, Lvs ov -obl ending in petiole 3-nrvd hispidly hairy
17480 Bran twiggy, Lvs altern lin -obl hairy alm sess Pedun. solit 1 flwd almost oppos the lvs rameal or termin Cal hairy [slender few flowered
17481 Bran dichotom smthish Lvs. minute ovate acute glabr margins revolute on short footstalks, Racemes
17482 Bran clthd with hoary toment Lvs roundish or ovate obt green and beset with hisp hairs ab and hoary toment ben Rac simple, Cal pilose [Hairs cinereous
17483 Procumb Bran pilosely hairy, Lvs green on both surfs obl ellipt rather glabrous or with hairs in fascicles,
17484 Procumb Bran ascend pilosely toment canesc Lvs ov -obl green and strigosely pilose ab hoary toment ben, Rac simple few-flowered [Rac long hairy bearded many-flwd
17485 Bran clothed with fascicled hairs, Lvs hairy green both surfs lower ones roundish-ovate upper ones ellipt.
17486 Bran procumb rather toment Lvs flat ov -obl acutish smth ab densely toment ben pale cinereous Stips rath pilose about eq to petioles [Stips awl-sh pilose and bristly at tip
17487 Procumb Bran rath toment and hoary, Lvs obl revolute margins hoary toment ben greenish glauc ab
17488 Bran rath toment Lvs flat or hardly revolute at margins toment. hoary ben greenish glauc ab lower lvs ov -obl obt upper lanceol acute [Stips awl-sh lin longer than pets
17489 Bran hoary toment at apex, Lvs lanceol acute margins revolute green and smthish ab hoary toment ben
17490 Bran toment rath hoary, Lvs lanceol acute flattish hoary toment ben green and rath scabr ab Stips lin ciliat longer than pets Cal clthd with violac toment [at top somewh longer than lvs.
17491 Lvs oblong flat or concave above hoary-toment beneath green and glabr above, Stips obl -lin ciliat bristly
17492 Bran hairy-tomentose, Lower lvs oval upper ones oblong-lanceol green on both surfs flat hairy Cal hairy, Petals imbricate

and Miscellaneous Particulars

2644 *Platystigma.* A pretty little hardy annual, and requiring the usual treatment of such
2645 *Calythrix.* A genus of singular plants, requiring the same treatment as that recommended for Lùdia.

History, Use, Propagation, Culture,

2647. ***Eschscholtzia.*** The generic name Chrysèis has been applied to this genus by Dr Lindley, under the supposition that the name *Eschscholtz* was the same as that of *Elsholtz*, after whom another genus had been named. It has, however, since been proved that the names are quite distinct, therefore we retain that of Eschscholtzia. Showy flowers, which, though they will occasionally last several years as perennials, are grown as annuals, and are desirable for the flower-garden

17515 Pet ditto, Lvs pubes 5-lbd lbs dply. serrat Brac lanceol villous clammy, Spur curved, Capsule smooth
17516 Pet ditto, Lvs 3-5-parted, Lbs narrow somew pinnatif. acute upper lvs. 3-parted with entire lobes, Rac. lax, Caps pubes [long th pedicel
17517 Pet dilat. and sheathing at base, Lvs many-parted, Lbs. linear, Rac elongat. crowded, Spur straight blunt rather
17518 Stem erect slender a little bran. and rather pubes at apex, Pedic much longer than the awl-sh. bracteas
17519 Lvs petiolate tripartite segms lin.-cuneate ent or dply. and uneq bifid, upper ones narrowest, Rac. lax elongat Rachis and pedicels downy

TETRAGYNIA.

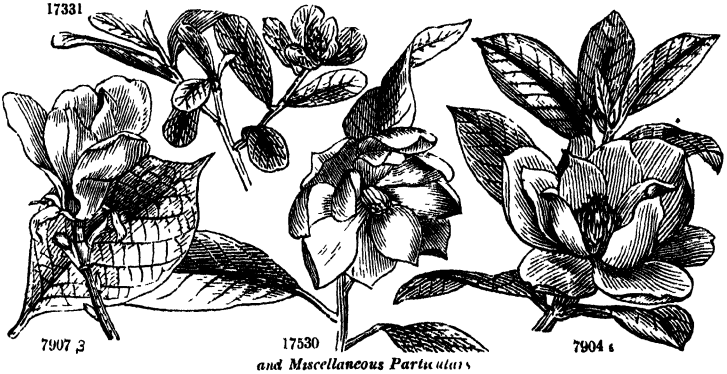
17520 Stigmas 4 two longer than the others, Seeds globose almost black
17521 Stem branching and leafy, Segms of lvs linear, Peduncle with funnel-shpd. appendage, Limb much dilated, Cal long and acumin. [large nearly flat
17522 Stem dwarf densely bran Segms. of lvs linear wedge-sh tridentate at apex, Cup of pedunc. funnel-sh Limb

PENTAGYNIA.

δ stellàta (starred *double blue & white flwd*) ε dégener (degenerate *double blue & white flwd*)
17523 Spur incurved, Caps very smooth, Stem 1-2-flwd almost naked smooth, Sepals very blunt
17524 Hybrid between A sibirica and A vulgàris
17525 Spur straight equal in length to petals, Stamens equal in length to petals, Styles protruding
17526 Spur straight very short equal in length to pet Petals thrice as long as cal Pedun radic 1-flwd almost naked
17527 Spur straight length of limb, Sepals oval, Stem few-flowered, Lvs deeply divided [longer than petals
17528 Spur straight much longer than petals and very short stamens, Styles not protruding, Sepals lanceol. much

POLYGYNIA.

δ Differs from var ε in having rather broader leaves and larger flws, and forms a broader and more compact
ε Lvs oblong-elliptical generally rusty beneath, Flws somewhat contracted [tree or bush
ζ Has roundish leaves
η Lvs oval-oblong, Flws. fully expanded
θ
Lvs lanceol pointed at both extremities wavy



β Is a supposed hybrid between M glaúca and M tripétala
γ Lvs ellipt acute at both ends resembling those of M tripetala but thicker smaller and glaucous beneath

β Hardly distinguishable from M conspicua except by the flws which resemble in form those of M purpùrea
γ Closely resembling var β from which it differs in flowering somewhat earlier [var. grácilis
δ A hybrid scarcely differing from var γ
ε

β Leaves ovate oblong acute, Flws greenish
γ Leaves much larger than those of the species

17529 Lvs ovate roundish somewh cuneated at base, Petals 12 thick oblong obtuse
17530 Lvs oblong acumin at both ends, Flws 9-12 petaled outer ones short, Pedun 1-flwd rather droopg clthd as are petioles of young lvs with ruf vill

7531 Lvs cuneate-obov obt under surf as well as bran clthd with brown pubes Flws sess Outer petals obov much larger than cal [ab bluntly cord 5-lbd 3-lvd
7532 Lvs large cord 5-lbd woolly beh Lbs broad ov cut and cren those of involucr stalked woolly beh smth
7533 Lvs bitern those of involucr on very short stalks, Lbs elongat acumin Pedic 2 pubescent Sepals 5 elliptical

and Miscellaneous Particulars

2648 Talaúma is a genus of magnificent trees and shrubs, resembling magnolias A mixture of loam, peat, and nd suits them They may be increased by layers or inarching on Magnòlia obovata, and ripened cuttings will root sand, under a hand-glass, in heat

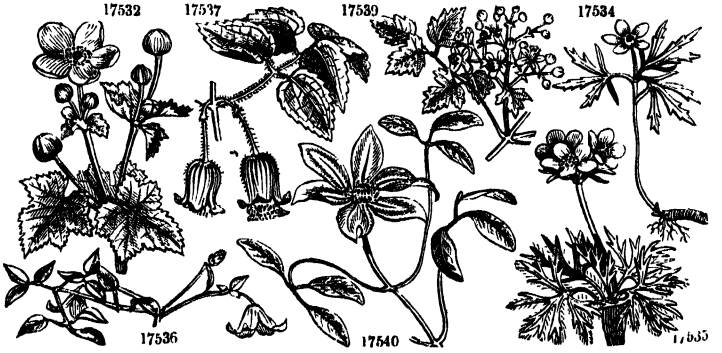
Page 490. CLASS XIV — DIDYNAMIA 4 STAMENS, of which two are shorter than the others.

Order 1. GYMNOSPERMIA Pericarpium divided into four lobes resembling naked seeds.

2649 *Lophánthus* Calyx equal, or oblique, or sublabiate, usually 15-nerved, superior teeth the largest Corolla bilabiate Stamens ascending, or diverging
2650 *Aphanochìlus* Corolla tubular Limb short, bilabiate. Anthers versatile Cells divaricate. Lobes of gynophore shorter than ovarium
2651 *Dysophýlla* Anthers terminal, also the younger ones confluently 1-celled Stamens somewhat declinate Corolla almost regular
2652 *Pycnóstachys* Lower segment of corolla elongated, concave Teeth of fructiferous calyx subulately spinose Whorls of flowers spicate
2653 *Sphacele* Calyx reticulately veined, 5-toothed, limb not dilated, teeth nearly equal Tube of corolla ample Cells of anthers linear, diverging
2654 *Perìlòmia* Achenia membranously winged Segments of corolla flattish Gynophore elongated, incurved, oblique at apex Lips of calyx entire
2655 *Roýlea* Calyx tubular at base, 10-nerved Segment 5, equal, oblong, membranous
2656 *Microméria* Tube of corolla rarely exserted Calyx nearly equal Superior stamens antheriferous
2657 *Gardoquia* Calyx tubular, somewhat incurved, with an equal or sub-bilabiate mouth Tube of corolla much exserted Stamens 1-3, now and then sterile
2658 *Physostègia* Calyx obscurely veined, inflated after inflorescence Corolla much exserted, with an ample throat
2659 *Coleus* Fructiferous calyx toothed, not spiny, with an open mouth Filaments monadelphous Lower segment of corolla elongated, concave
2660 *Chilòdia* Upper lip of calyx entire, tube short, 13-nerved, lower one bifid. Anthers mutic, 2-celled

Order 2. ANGIOSPERMIA Seeds several, enclosed in an undivided pericarpium



2661 *Pentarāphia* Calyx adnate to the ovarium. Corolla superior Ring of glands hardly present. Anthers connected by pairs
2662 *Rytidophýllum* Calyx adnate to the ovarium Corolla superior. Epigynous ring thick and sinuated Leaves stipulate
2663 *Sinningia* Corolla oblique, ringent, with only one gibbosity at base. Calyx adnate to the ovarium, angularly winged
2664 *Amphicome* Calyx tubular, 5-toothed Corolla tubular, ventricose near base Limb 5-lobed, ciliated Stamens 4, didynamous, with rudiment of a fifth Stigma bilamellate Capsule silique-formed Seeds winged at both ends, and bearded

2665 *Tuldia* Calyx 5-parted, enclosed in spathe-formed bractea, which is cleft on one side Corolla tubularly ventricose Limb equal, 5-lobed, sub-bilabiate Stamens 5, 4 fertile exserted, sterile one enclosed Stigma bilamellate Berry spongy, longer than calyx
2666 *Tecoma* Calyx 5-toothed Corolla with short tube and campanulate throat Limb 5-lobed, sub-bilabiate. Lobes of anthers divaricate Capsule silique-formed, dissepiment contrary Seeds disposed in 2 rows, imbricate, winged, transverse
2667 *Salpiglóssis* Calyx 5-angled, 5-cleft Corolla funnel-shaped, 5-lobed Lobes 2-lobed Stamens didynamous, with rudiment of a fifth between the 2 longer ones Style tongue-shaped at apex Stigma truncate, transverse
2668 *Calámpolis* Calyx semi-5-cleft Corolla with tubular base, ventricose throat, and a contracted 5-lobed limb Stamens 4, didynamous, without any rudiment of a fifth Lobes of anthers obtuse, divaricate, distinct at apex Wings of seeds repandly sinuated, emarginate at base
2669 *Eucnemocárpus* Calyx membranous, 5-cleft, coloured Corolla tubular, with an equal throat, and a 5-lobed equal limb Stamens 4, didynamous, with the rudiment of a fifth. Anthers versatile Cells parallel, combined Wings of seeds repandly sinuated, nerved
2670 *Strobilánthes.* Calyx 5-parted Corolla funnel-shaped. Anthers erect, with parallel cells Capsule 4-seeded in the middle Seeds small
2671 *Goldfússia* Calyx 5-parted Corolla funnel-shaped Limb nearly equal Anthers erect, 2-celled Stigma subulate, crenulate on one side Capsule 6-angled, 2-valved Cells 2-seeded at bottom Seeds discoid
2672 *Calóphanes* Calyx 5-parted, equal Corolla funnel-shaped Throat ventricose Limb bilobed nearly equal Stamens enclosed Cells of anthers parallel, spurred at the base Stigmas simple Cells of ovarium 2-seeded Capsules sessile, almost cylindrical
2673 *Amasónia* Calyx 5-cleft, bracteate Bracteas coloured Corolla tubular, 5-cleft, equal Style bifid Drupe 2 4-seeded
2674 *Geissoméria* Calyx 5-parted Sepals glumaceous, equal Corolla tubular, clavate Limb nearly equal, lower segment bearded. Cells of anthers parallel, hairy at apex Ovarium 2-celled Cells 2-seeded. Stigma funnel-shaped
2675 *Chloánthes* Calyx 5-cleft. Corolla tubular, upper lip bifid, lower one tripartite Stamens exserted Stigma bifid Drupe containing 3 nuts
2676 *Lophospérmum* Corolla bilabiate Tube wide, gibbous at base Capsule dehiscing irregularly under the apex
2677 *Scymèria* Calyx deeply 5-cleft. Corolla with a short tube, and a subrotate spreading limb Stamens a little longer than the corolla Cells of anthers nearly equal
678 *Diplacus.* Calyx prismatic, 5-cleft Corolla ringent, 5-cleft Lobes emarginate Stigma bilamellate Capsule 2-celled Placenta broad Seeds subulated at both ends
2679 *Torénia.* Calyx plicate, obliquely 5-toothed Two lower filaments appendiculate, or gibbous at base
2680 *Collinsia* Corolla gibbous above the base Limb very irregular. Capsule 2-valved Valves bipartite
2681 *Franciscea* Calyx 5-toothed. Corolla salver-shaped. Stigma 2-lobed Capsule 2 celled, dissepiment parallel with the valves, separating from the parietes at the base

17559 Calyx truncate obscurely 3-5-lobed, Lobes very broad denticulated

17560 Lvs petiol broad-ov crenat rounded at base or cuneat very thick hispid or clothed with white villi, Whorls remote 20-30-flwd

17561 Bran pubes Lvs sess. lin. lanceol acute quite ent with subrevolute edges, Flor lvs exceeding flws Cal ciliated

ANGIOSPERMIA.

17562 Pubesc Lvs falsely verticill 4-5-6 rarely oppos ov acute crenately toothed, Cyme termin Hypogynous glands twin behind

and Miscellaneous Particulars.

2656 *Micromeria* is a genus of plants which thrive, during the summer, on rockwork, but require the protection of a frame in winter.

2657 *Gardoquia*. The species are well deserving of cultivation; they thrive in a mixture of sand, loam, and peat, and cuttings root readily in sand, under a hand-glass.

2658 *Physostegia*. Elegant plants of easy culture, well adapted to the flower border. They may be readily increased by division of the root, and will thrive in common garden soil.

2659 *Cóleus* A mixture of peat and loam suits this plant, and cuttings root readily in sand, in a gentle heat.

2660 *Chilódia*. For propagation and culture see Cóleus, above

1290. *Gésnera*. Very showy plants while in flower. A light rich soil, or a mixture of loam, peat, and sand, suits them Most of the species increase readily by cuttings, and by tubers of the root. While dormant, they require to be kept dry

Order 1. TRIANDRIA. Stamens 3.

2684 *Orthosánthes* Spathe many-flowered, 2-valved Perianth 6-parted, equal, with a short triangular tube Stamens 3, combined at the base Stigmas 3, fringed at top Capsule oblong, trigonal, many-seeded

2685 *Cypélla* Spathe 2-leaved Perianth 6-parted, concave at the base, outer segments large, spreading; inner ones small, convolute, reflexed at apex Stamens 3, monadelphous Style slender. Stigma 3-lobed, the lobes 3-fid and appendiculate Capsule oblong, 3-celled, 3-valved, many-seeded Seeds angular

2686. *Herbértia* Perianth 6-parted, tube very short, 3 outer segments much smaller than the inner ones Stamens 3, monadelphous. Anthers linear Stigmas 3, bifid Capsule oblong, 3-celled, many-seeded Seeds angular

2687 *Spatalánthus* Spathe rigid, 2-valved, 1-flowered Perianth spreading, with a very short tube, and a 6-parted regular limb Stamens 3, short, monadelphous Anthers oblong, sagittate. Ovarium warted at apex Stigmas 3, bifurcate

2688 *Homéria* Perianth 6-parted, alternate segments smaller, tube very short Stamens 3, monadelphous Stigmas 3-fid, the segments bifid and fringed

Order 2 PENTANDRIA. Stamens 5.

2689 *Mahérnia* Cal naked, campanulate, 5-cleft Petals 5, with an obcordate limb, spirally twisted, and straightish claws Filaments monadelphous at base, dilated into a cordate tubercle, or a cup-formed process in the middle Styles 5, sometimes joined into 1. Capsule 5-celled, 5-valved, many-seeded

2690 *Malvavíscus* Cal tubular, membranous, inflated, 5-lobed Filaments filiform, distinct, or connected with the stipe of the ovarium. Anthers versatile Ovarium superior, stipitate, 1-celled, with the placentas at the base, from which the ovules arise by the intervention of umbilical cords Styles 3, filiform Stigmas clavate Fruit capsular, 1-celled, 3-valved Testa crustaceous, brittle, with a fleshy crest and no arillus Embryo round, in the centre of fleshy albumen, with the radicle next the hilum

2691 *Clintónia* Limb of cal 5-cleft Cor bilabiate, with hardly any tube Anthers cohering, 2 superior one bearded Capsule silique-formed, triangular, dehiscing by 3 loriform valves, many-seeded Seeds attached to two parietal placentas

Order 6 DODECANDRIA Stamens 12

2692 *Philothèca* Cal 5-parted Petals 5, unguiculate Stamens 10, unequal, connate at base, with tube smooth and free, part of the filaments hairy Fruit of 5 1 seeded carpels Leaves alternate, linear

1424. *Erýsimum* 17081 *Perowskiánum*. A very splendid annual, of the easiest culture.

17680 Pubescent, Lvs. wedge-sh obtusely dent Pods corymbose acutely 2-lbd ma gins gnawed crenat. Seeds winged, Stem strictly branched

17681 Lvs lanceol toothed, Petals obov Stigmas globose, Fruit silique 4-sided

17682 Velvety-pubescent somewhat clammy, Lflts. 7 with 20 veins on each side of each leaflet
17683 Unarmed, Lflts 5-7 lanceol acuminated pilose, Brac ovate, Petals length of pedicels, Pedicel of fruit long

---

2693 *Omphalòbium.* Cal 5-parted Petals 5, imbricate in æstivation Stamens monadelphous, or somewhat polyadelphous at base Carpels 5, each bearing a style Capsules 1 ', legume-formed, 2-valved, dehiscent Seed twin, or solitary, exalbuminous Leaves trifoliate, or impari-pinnate

2694 *Parkia* Flowers hermaphrodite Calyx tubular, bilabiate, imbricate in æstivation Legume compressed, many-seeded Seeds covered with farinaceous substance

2695 *Sarcocaulon.* Sepals 5, equal Petals 4, equal Stamens 15, monadelphous at base

2696 *Montezùma* Calyx hemispherical, truncate, sinuately toothed Stamens numerous, twisted around the style, monadelphous, with 5 distinct furrows Capsules globose, 4-5-celled Cells many-seeded Leaves entire

2697 *Assonia* Calyx girded by a 3-crenate 1-leaved involucel Antheriferous filaments 15, 3 fertile between each sterile one Styles 5, very short Carpels 5, 2-seeded, closely connected into a single capsule. Seeds rather triquetrous, not winged

2698 *Plagianthus* Calyx 5-cleft Petals 5, 2 of which are approximate, remote from the rest Stigma clavate.

2699 *Nuttallia* Cal naked, 5-cleft Anth numerous. Stig numerous, filiform Carp numerous, disposed into a ring, or whorl, 1-seeded, not opening spontaneously

2700 *Labiconia* Cal. 5-parted, girded by a shorter 5-parted involucel Petals 5, exserted in part, twisted in æstivation, with a spreading limb. Styles 10 Carp 5, or only 4 from abortion, 1-seeded, indehiscent

2701 Abùtilon Cal naked, 5-cleft, usually angular Styles multifid at apex. Carp capsular, 5-30, many-seeded, usually bladdery, disposed into a whorl around the axis, so closely connected with each other as to form a many-celled capsule

2702 *Eriolæ'na* Cal. tomentose, girded by a 5-leaved involucel Calyx-lobes jagged, 3 inner ones largest, all shorter than the calyx Petals unguiculate Stam disposed in many series, monadelphous, outer ones shortest, all fertile. Style solitary, villous, crowned by numerous aggregate small stigmas.

2703 *Recvesia* Flowers hermaphrodite Stams monadelphous Anth 15, sessile on the top of the tube Calyx stipitate, 5-celled, 5-valved. Cells 2-seeded Seeds winged at base.

2704 Stravàdium Limb of calyx 4-parted Ovarium semilocular Cells 2-ovulate Otherwise agreeing with Barringtònia, in p 561

2705 *Morisonia* Cal obovate, bifid Petals 4 Stams 20, somewhat monadelphous at base ? Berry stipitate, globose

and Miscellaneous Particulars.

2690 *Malesherbia* is a genus of singular and ornamental plants, at present somewhat rare in collections, but nevertheless well deserving cultivation.

2691 *Clintonia* is a genus of tender annuals, and requires the treatment of such. The flowers are elegant, but the plants are very thinly clothed with foliage

2692 *Philotheca* The soil most suitable to this genus is a mixture of sandy loam and peat, and the plants require to be placed in an airy situation, and not crowded amongst other plants. Cuttings root freely in sand, under a bell-glass.

History, Use, Propagation, Culture,

2693 *Omphalòbium* For soil and propagation, see Philothèca, above

2694 *Pàrkia* The species of this genus may be increased by cuttings of the young wood, planted in sand under a bell-glass, in heat "In Soudan the seeds of *P. africàna* are roasted as we roast coffee, then bruised, and allowed to ferment in water, when they begin to become putrid they are well washed and pounded, the powder made into cakes somewhat in the manner of our chocolate They form an excellent sauce for all kinds of food The farinaceous matter surrounding the seeds is made into a kind of sweetmeat" (*Don's Mill*, 2 396)

2695 *Sarcocaùlon* is a genus of curious spiny shrubs, which bear beautiful large flowers. They may be increased by cuttings and slips of the roots, in good soil, under a bell-glass

2696 *Montezùma* 17718 *speciosissima* is a very showy tree, thriving in a mixture of loam and peat. Full-grown cuttings (not too old) will root freely in sand, under a bell-glass, in a moist heat

2697. *Assònia* A light rich soil, or a mixture of loam and peat, suits this genus; and young cuttings root freely under a hand-glass, in heat.

17715 Lflts 3 oval acuminated smooth on both surfs somewh membran and feather-nrvd Flws. panicled, Carpels solit. stipitate

and Miscellaneous Particulars

2698 *Plagiánthus* A shrub which, if planted in a warm sheltered situation, will stand our winters; and cuttings of young wood root freely in sand under a hand-glass

2699 *Nuttállia* is a genus of very elegant plants when in blossom, well deserving a place in every collection Peat with a little sand suits them best They may be increased by division or by seed

1477 Urèna 17726 *speciòsa* "This is a very elegant plant, with large pink flowers, which are disposed in a kind of terminal racemose panicle It differs so much in habit from all the other species of this genus, that we doubt its being a genuine species of *Urèna*" (*Don's Mill.* 1. 47)

5700 *Lebretonia* The species of this genus deserve to be cultivated in every collection, on account of their showy scarlet blossoms A mixture of loam and peat suits them best Cuttings taken off close to the stem of the plant root readily in sand under a hand-glass None of the leaves should be taken off, or shortened above the sand

5701 Abutilon Some of the species of this genus are rather ornamental when in flower. They thrive in any light rich soil, and are readily increased by cuttings, which should be placed in a gentle heat.

17741 Lvs. cuneate-obl. acuminat obsoletely serrulated, Rac very long pendulous, Drupe acutely 4-angled

17742 The only species

2710 *Velmoreia* Cal cylindrical, 4-toothed, somewhat bilabiate Wings shorter than the keel Style acute. Legume stalked, lanceolate, compressed, tapering
2711 *Barbieria* Cal tubular, 5-cleft, bibracteate at base, Wings shorter than keel, and keel shorter than vexillum Style bearded at apex Stigma obtuse Legume linear, villous, many-seeded
2712 *Dumasia* Cal obliquely truncate, toothless, bibracteate at base Claws of petals length of calyx Keel obtuse Legume tapering to the base, compressed, few-seeded
2713 *Neurocarpum* Cal tubular, with 5 acuminated nearly equal teeth, and furnished with 2 bracteas at base. Vexillum large, roundish Keel obtuse Legume stipitate, compressed, sub-tetragonal from the middle nerve of the valves being rather prominent, 4-8-seeded
2714 *Cologania* Cal tubular, 5-cleft, bibracteate at base, somewhat bilabiate Vexillum roundish Ovary stipitate, linear, very hispid, girded by the disk Style smooth, obtuse
2715. *Clianthus* Calyx campanulate, 5-toothed, 5-cleft Vexillum ovate-lanceolate, acuminate, rather short, the keel reflexed Wings lanceolate, spreading Keel cymbiform Anthers incumbent. Style filiform Stigma truncate. Legume oblong, swollen, coriaceous
2716 *Adesmia.* Cal 5-cleft, lobes acute Vexillum complicated above the wings when young. Keel curved and truncate at base Stams distinct, but approximate Legume compressed, many-jointed
2717. *Hosackia* Cal campanulate, 5-cleft Wings equal in length to vexillum Keel beaked. Stigma capitate Legume cylindrical, or rather compressed, straight

OCTANDRIA.

17743 Stems many erect, Lvs obl.-lin crowded, Rac 8-12-flwd Capsule somewhat 2-horned at apex
17744 Lvs narrow tapering to both ends acute and as well as twigs smooth, Rac elongat Brac decid Pedunc longer than flws Wings obtuse

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2706 *Monnina* A genus of plants not worth cultivation for ornament A mixture of loam and peat suits them, and cuttings of the young wood root readily in sand, under a hand-glass, in heat.

2707 *Amhérstia* 17746 *nóbilis* is a native of the Burman empire, in the garden of a decayed kioun, a sort of monastery, 2 miles from the right bank of the Salven river, and 27 miles from the town of Martabau, but its native place of growth is still unknown, as the trees found in the garden have undoubtedly been planted there The flowers are large, of a fine vermilion colour, diversified with yellow spots This tree, when in foliage and blossom, is the most superb object that can possibly be imagined, and not surpassed by any plant in the world. The Burmese name of the tree is *Thoka*

17745 Lvs oblong obtuse cuneate at base obsoletely veined rather leathery glabrous as are branchlets, Rac. solitary

DECANDRIA.

17746 The only species

17747 Stem suffrutic bran Bran glabr rather prickly, Lflts petiol obl acumin Petioles rath prickly glandul. Cal truncate unident

17748 Bran smooth glabrous, Lvs. ovato-oblong glabrous acuminated, Racemes pedunculate

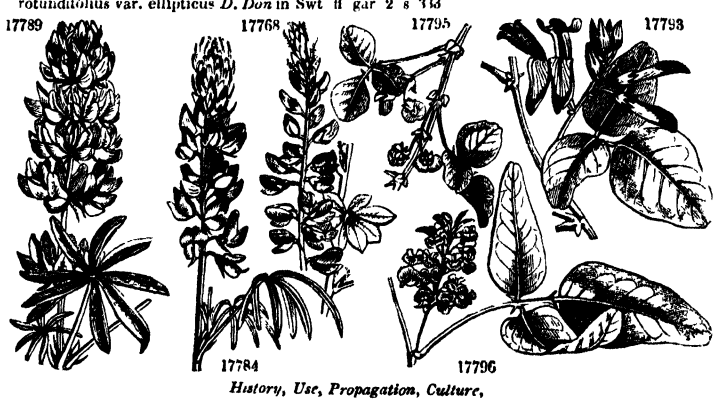
[Stipules subulate

17770 Very hairy, Flws verticill pedicell bracteol Upper lip of cal bifid lower ent Lflts. 5-9 lin -lanceol villous,
17771 Very villous, Flws altern on short pedic bracteol Upper lip of cal bifid lower ent Lflts 5-7 lanceol silky. Leg. glabr 3-5-seeded



and Miscellaneous Particulars.

Handfuls of flowers were presented as offerings in the cave before the images of Buddha. Along with this tree were found some trees of Mesùa *ferrea* and *Jonésia* Asòca It is not a little remarkable, that the priests of these parts should have manifested so good a taste as to select three sorts of trees, as ornaments to their objects of worship, which can hardly be surpassed in beauty. A light loamy soil suits this tree, and large cuttings root in sand, under a hand-glass, in heat

2709 *Lálage* 17751 *ornàta* is a very gay flowering shrub, which requires to be kept in a well-aired green-house, in peat soil, and may be multiplied by cuttings

History, Use, Propagation, Culture.

2715. *Clianthus* 17812 *puniceus* is a splendid half-hardy shrub, which well deserves a place in every collection It is very readily increased by cuttings and by seed, and thrives in peat or any light rich soil. In New Zeal nd it is called *kowaru-gutukaka*, or the parrot's bill, and it is said to grow there to the size of a large tree.

2716. *Adésmia* is a genus of South American plants, some of which are shrubby; the appearance of several of them resembles that of Genísta, and may be increased in the same manner

17808 Glabr. or pubes. Lvs with 4-6 pairs of ellipt. rarely ov or obl. lflts Stip. small semisagitt. lanceol. with lobe deflexed and about eq in length to stips [acute angularly toothed at base, Leg convex narrow
17809 Stem flexuous winged, Wings ciliately pubes. Lvs with 3 4 pairs of ov obt glauces lflts Stip semisagitt ov
17810 Stem 4-gonal glabr Lvs glauc with 4-5 pairs of ov.-obl. glabr mucronul. lflts. Stip. semisagitt. about size of lflts Leg obl rather falcate inflated

17811 Bran round hoary as are lvs. Lvs. trifoliate, Lflts. oval toment. on margin, Flws tern alm. bractless, Cal membran pubes Leg. glabr

17812 Minutely pubes Lflts. altern. obl retuse coriaceous, Flws. racemose, Calyx 5-toothed smooth

17813 Lflts. roundish ellipt retuse, Rac. droopg few-flwd Callosities of vexillum papilliform, Leg. rather coriaceous pubescent [3-jointed covered with long plumose bristles
17814 Much bran Bran striat pubes divaric spinose, Lvs 6-pairs of small orbicul lflts on short pets pubes Leg.
17815 Stem diffuse hardly pubes Lvs 7-9 pairs of oval-obl ent pubes lflts Rac elongat Leg pendul with 7-8 rather hispid joints
17816 Silky erect much branched very leafy, Lflts 3-pairs lin lanceol Pedunc axillary solit Cal 5-cleft, Legumes 3-jointed [lflts Pod of 4 to 6 1-seeded joints
17817 Unarmed clammy with numer tubercul shining glands, Lvs of 9-14 pairs of cuneat -obl cren coriac nrly sess
17818 Spiny, Leaflets 5 pairs oval obtuse glabrous, Teeth of calyx semiovate acute reflexed, Legumes bristly 2 or 3 joints [Leg. straight compressed mucron pendul 8-10-seeded
17819 Lvs pinnate with 5 7 or 10 pairs of oval retuse mucronul lflts rather undul on margins, Rac axill slender,
17820 Lvs pinnate with 5 pairs of obovato-ellipt flat slightly pubes lflts Rac axill longer th lvs. Leg. subcylind glabr 6-10-seeded

17821 Stem erect flexuose a little branch villous, Lvs of 5 ellip hairy lflts Pedunc axill elong Racemes obl spicate. Flowers erect [lvs Spikes cylindric hairy as are rachis and bract
17822 Lvs pinnately trifol pubes Lflts ovate mucron. Petioles scabr from glands, Pedun axill 4 times longer than
17823 Covered with down intermixed with glands, Leaflets round oval heads con Pedunc. very long axill. Bracteas obl concave, very hairy, Stem creeping

17824 Glabrous, Flws umbel. 6-10 in each umbel bractless, Leaves with 7-9 leaflets

---

2720 *Blumenbachia* Tube of cal spirally twisted Limb 5-parted Petals 10, 5 outer ones cucullate, and the 5 inner ones scale-formed, each scale enclosing 2 sterile filaments Fertile stams disposed in 5 bundles Fruit dividing into 10 parts at base

2721 *Scyphanthus* Cal deeply 5-parted, permanent, equal Petals 5 Stams numerous, perigynous, 10 outer ones destitute of anthers, and placed by twos opposite the scales, and longer than the rest, which are disposed in 5 fascicles opposite the petals. Caps prismatic, silique-formed, crowned by tube of calyx, 3-valved at apex. Seeds oval wrinkled

Page 660. CLASS XIX. — SYNGENESIA STAMENS 5. ANTHERS united by their edges

Order 1. ÆQUALIS Florets of the disk and ray all hermaphrodite

2722 *Craspèdia*. Heads 5-flwd. homogamous, girded by bracteas seated on a cylindrical woolly rachis, receptacle narrow. Paleæ entire Scales of involucrum membranous Corollas tubular, 5-toothed Anthers setiferous at the base. Achænia oblong, villous Pappus in one series, composed of filiform plumose bristles.
2723. *Erythrolæ'na* Involuc conical, inner lvs imbricated, outer ones reflexed, spiny-toothed Receptacle convex, pilose. Flowers hermaphrodite, tubular, with a 5-parted limb and a 5-angled tube Filaments glandular. Anthers bisetose at the base. Stigma bifid Pappus sessile, plumose
2724 *Alòmia*. Heads many-flwd Involucrum campanulate, imbricate Scales narrow, acute. Receptacle naked, convex. Tube of corolla slender, glabrous Anthers terminated by obtuse appendages. Lobes of style elongated Achænia 5-angled, naked at top
2725 *Ozothámnus*. Head 3-20-flowered, homogamous Receptacle alveolate, usually naked. Involucrum imbricate. Scale scarious, obtuse. Corolla 3-toothed. Anthers bisetose at the base Achænia obovate. Pappus in one series, composed of filiform scabrous bristles.

Order 2. SUPERFLUA. Florets of the disk hermaphrodite, of the ray female.

2726 *Leptostèlma* Involuc equal, hemispherical Receptacle paleaceous Flowers of the ray ligulate, female, those of the disk hermaphrodite, tubular, 5-toothed Pappus capillary.
2727. *Adenotrichia* Involucrum double, many-lvd, outer lvs. squarrose, subulate, glandular. Flowers of the ray ligulate, almost entire, female, those of the disk tubular, filiform, hermaphrodite Receptacle naked Pappus pilose
2728 *Diplopáppus* Ray flowers in 1 series, female, those of the disk hemaphrodite, tubular. Pappus in 2 series Corollas of the disk regular Achænia beakless.
2729 *Brachyglottis* Heads 9-10-flowered, heterogamous Ray flowers in 1 series, female, ligulate, shorter than the disk, disk flowers tubular, 5-toothed, hermaphrodite. Receptacle naked. Involucrum oblong, surrounded by 1 row of linear scales. Achænia oblong. Pappus in 1 series, composed of dense scabrous bristles, which are combined at the base
2730. *Rhodánthe*. Heads many-flwd. Flowers hermaphrodite. Pappus in 1 series, hair formed, plumose Achænia beakless, woolly. Receptacle naked
2731. *Diplácoma* Involucrum many-lvd. imbricated. Flowers of the ray female, ligulate, those of the disk hermaphrodite, tubular Achænia of the rays bald at the top, those of the disk pappose Pappus double, unequal
2732 *Nèja*. Involucrum many-lvd imbricated Receptacle pitted. Flowers of the ray female, ligulate, those of the disk hermaphrodite, tubular, 5-toothed. Achænia uniform. Pappus double; outer paleaceous, inner pilose
2733. *Mutisia*. Involucrum many-lvd imbricated. Receptacle naked Flowers of the ray ligulate, female, those of the disk hermaphrodite, bilabiate Filaments papillose. Anthers bisetose at the base. Achænia a little beaked. Pappus in many series, plumose
2734. *Chætachlæ'na*. Heads many-flwd heterogamous, ray-formed Involucrum hemispherical, imbricate, with linear flat scales. Receptacle pilose or fringed Ray flowers bilabiate, outer lip large, 3-toothed; inner one small, bipartite. Corollas of the disk tubular, 5-cleft, glabrous Anthers bisetose at the base. Achænia beakless, somewhat compressed. Pappus in two series, setaceous, scabrous
2735. *Lasthènia*. Head many-flowered, homogamous. Flowers of the ray female, tubular, obliquely truncate Receptacle conical, papillose Scales of involuc. in one series, combined into a toothed ciliated cup. Corolla short, with an inflated throat and a 5-toothed limb Achænia compressed, pubescent. Pappus composed of 5-10-toothed paleæ.

17828 Leaves smooth obovately cuneated blunt at the top entire, Branches cinereous rough

17829 Lvs. altern. bipinnatifid, Lobes bluntish, Pedic extra-axill Lbs. of cal lanceol -linear acute shorter than petals
17830 Clthd with harsh barbed white hairs and a few stinging ones intersp Lvs. scatter petiol. spread ov acute [hispid inciso-serrate, Pedun spread. ab half length of lvs.
17831 Canescent, Lvs. oppos. palmate toothed, Cal segms long and linear, Outer appendages hatchet-formed awned
17832 Climbing, Lvs. cord. palmate lobed, Petals sessile keeled, Append. 3-lbd. truncate each furnished inside with 2 bristles, Caps. spiral ribbed

17833 Lower lvs generally 7- but sometimes 5-lobed; upper ones deeply bipinnatifid
17834 Leaves palmate with bipinnatifid lobes, Flowers bibracteated, Petals hispid

17835 Stem dichotomous, Segments of leaves obtuse ciliated

and Miscellaneous Particulars

2721. *Scyphánthus* is a twining annual, with somewhat curious inflorescence. It is said to have been lost soon after its introduction in 1827

2736 *Baèria* Head many-flowered, heterogamous, radiate Scales of involuc about 10, flat, in 2 rows Receptacle conical, naked Flowers of the disk hermaphrodite, 5-toothed, those of the ray female, ligulate, fertile, in 1 series Achænia fusiform, somewhat tetragonal, glabrous

2737 *Erióphyllum* Head many-flowered, radiate Flowers of the ray female, ligulate Flowers of the disk hermaphrodite, 5-toothed, glandular. Involuc. ovate, with 1-2 series of adpressed scales Receptacle naked, or a little fringed Achænia turbinate or linear, tetragonal, glabrous. Paleæ of pappus 4-8, oval or oblong, membranous.

2738 *Lagenóphora* Head many-flowered, heterogamous Flowers of the ray ligulate, female, in 1 series, those of disk tubular, 5-toothed, hermaphrodite, male Receptacle flat, naked Scales of involuc in 2 series, acute, adpressed Achænia of the rays compressed, oblong, beakless, those of the disk abortive

2739 *Oxyùra.* Head many-flowered, radiate. Flowers of the ray 10-12, in 1 series, ligulate, female, those of the disk tubular, 5-toothed, hermaphrodite. Scales of involuc. in 1 series, convolute, each drawn out into lin leafy appendage at top Receptacle paleaceous. Branches of the styles of the disk flowers drawn out each into a hispid appendage Achænia compressed, glabrous.

2740. *Cladánthus.* Heads many-flowered, heterogamous. Flowers of the ray ligulate, neuter, those of the disk tubular, hermaphrodite, 5-toothed. Receptacle conical, paleaceous, intermixed with threads. Scales of involucrum in 1 series, scarious at top. Achænia compressed, glabrous.

2741. *Ericócoma.* Involucrum few-lvd. Receptacle paleaceous Paleæ cucul mucronate Flowers of the ray 4-10-ligulate, neuter; those of the disk hermaphrodite, 5-toothed. Achænia cuneated, glabrous at top, enclosed by the persistent paleæ.

2742 *Viguièra.* Heads many-flowered, heterogamous Flowers of the ray neuter, ligulate, those of the disk hermaphrodite, 5-toothed. Involucrum semiglobose, scales nearly equal, each drawn out into leafy appendage at top Receptacle paleaceous. Achænia compressed, obovate, pubescent, crowned by four lamellæ and two awns from the angles

2743 *Callíopsis.* Heads many-flowered, heterogamous. Flowers of the ray neuter, in 1 series, ligulate, 3-5-toothed, those of the disk hermaphrodite, tubular, 5-toothed Involucrum in 2-series, outer scales short, squarrose, inner ones large, erect, combined. Receptacle flat, paleaceous. Achænia compressed, glabrous, incurved, truncate, with a minute epigynous disk.

2744 *Plectocéphalus* Involucrum globose, imbricate Appendages to scales cartilaginous, pectinated. Receptacle clothed with setaceous paleæ. Flowers of the ray neuter, funnel-shaped, radiate; those of the disk hermaphrodite, tubular, quinquefid. Pappus uniform, pilose, scabrous, caducous.

Order 4. NECESSARIA. Florets of the ray female, of the disk male.

2745 *Moscària.* Involucrum 5-lvd. Receptacle paleaceous. Paleæ of two forms; outer paleæ cucul gibbous at the base, and truncated at apex. Flowers all hermaphrodite, bilabiate, equal. Pappus paleaceous, very short

2746 *Centroclinium.* Involucrum subglobose or cylindrical, imbricated Flowers of the disk tubular, 5-toothed, deeply-cleft on one side; those of the ray 7-12 in number, bilabiate, inner lip very minute, bipartite, outer lip very long, 3-fid Anthers biaristate, stigma entire Pappus unequal, scabrous Receptacle hispid

History, Use, Propagation, Culture,

2722. *Craspèdia* is a genus of ornamental herbaceous plants, increased by division of the root and by seed, and thrives in good light loam.

2723. *Erythrolæ'na* **17837** *conspícua* is an ornamental biennial, and delights in a warm sheltered situation, planted in rich garden soil.

2724 *Alòmia.* A mixture of sand and loam suits this genus, and cuttings root readily in sand under a bell-glass

ÆQUALIS.

17836 Lvs. oblong altern gradually smaller upwards lower and root lvs. longest and broader upw. so as to be spathul. clthd. with appress. rather silky hairs

17837 The only species

17838 Lvs. opposite rhomb. lanceol. deeply serrat. upper ones sessile, Infloresc. fastigiate

17839 The only species

17840 Bran downy erect slender virgate leafy, Lvs. lin.-lanceol lowerm. 1½ to 2 in. long acute passing into smal scales clthd. with white toment. ben. Scales of involucre numer.

17841 Lvs linear obtuse revolute on the margins clth with cinereous cobwebbed tomentum, Corymb. panicled Involucr hemispher. woolly

17842 Lvs. linear mucron with revolute margins cobwebbed and muricate above and tomentose beneath, Corymb terminal, Involucr. cobwebbed and rusty

SUPERFLUA.

17843 Stolones procumbent, Flower stems simple, Lvs. spatulate, Upper ones lin. tomentose on both surfaces but almost glabrous in an adult state, Corymbs terminal simple

17844 Lvs. lin. lanceol. acumin. obtuse at the base roughly ciliated upper ones subulate, Stem glabrous branch. Bract of involucrum acute

17845 Receptacle conical pilose, Flowers of the disk bearded in the limb, Stems diffuse

17846 Stem erect corymbose many-flwd glabrous Lvs. ciliat. acute quite entire rad. ones spatulate, Stem ones ovate lanceol. somewhat stem-clasping

17847 The only species

[of many closely placed linear scales

17848 Lvs obl obt semiamplexic at base thick and fleshy entire rad lvs spathul Panic corymbose, Involucr. cylindr.

17849 Lvs cord stalked angular sharply toothed white and woolly ben upper ones amplexic. Capitula numerous in corymbose panicle

17850 The only species

17851 Erect pilose, Lvs. ovate acute serrated tapering at the petioles, Infloresc. paniculate corymbose

17852 Lvs lin obt. hoary half stem-clasp. Stem corymbose, Bran 1-flwd. Lflts. of involucrum squarrose glandular

17853 Lvs. ovate repandly sinuate, Panicle compound divaricate

17854 Glabrous erect, Lower lvs petiol lyrate downy beneath, Terminal lobe reniform toothed, Upper lvs sessile amplexic lanceol and little toothed uppermost ones quite entire, Pedunc 1-headed

17855 Stem simple rather woolly, Rad. lvs. ellip repandly toothed, Stem lvs. lanceol entire, Inflores: corymbose

[leafless, Achænia glabrous

17856 Smoothish, Stem simple furrowed, Radical lvs ellip toothed cauline one amplexic. Panicle elong crowded

and Miscellaneous Particulars

2725 *Oxothámnus.* A mixture of peat and loam suits this genus, and the species may be increased by cuttings

2726 *Leptostélma* This genus may be increased by division of the root, and will thrive in good garden soil

2727 *Adenotrichia* Culture, &c., see Leptostélma, above.

2728 *Diplopáppus* This genus may be increased by cuttings, and the plants thrive in a sandy loam

2729 *Brachyglóttis.* For soil and propagation see Diplopáppus, above.

History, Use, Propagation, Culture,

2730. *Rhodánthe* is a very elegant little tender annual, and highly deserving a place in every greenhouse, and it requires to be grown in a good light soil

1747. *Podolepis* 17860 *grácilis* is a very pretty annual, deserving a place in every flower border.

2731. *Diplócoma* A handsome but rather tender herbaceous plant, requiring a light soil, with slight protection in severe weather.

2732. *Nèja* may be readily increased by cuttings, and will thrive in a good light soil.

2733. *Mutísia* is an exceedingly interesting genus of shrubby climbers, with leaves terminating in tendrils, by the prehension of which the stems are supported M latifòlia represents a family of climbers so very different from every other hitherto propagated in British gardens, that we cannot but strongly recommend it for trial against every conservative wall. (*Arb. Brit.*)

2734. *Chætachlæ'na.* A very pretty herbaceous plant, of easy culture.

17857 Glabrous, Stem 1-4-headed, Lvs spatulate toothed, Lower ones renif. Upper ones somewhat rhomb. Petioles naked woolly at base, Achænia glabrous

17858 Lvs. sessile thickish lin. pinnatifidly toothed wrinkled glabrous, Heads solitary, Involucr. clammy, Outer scales spreading

17859 The only species

17860 Glabrous branch. Scales of involucr. glandular along the spike obtuse, Cauline lvs. adnate by the auricles to the stem.

17861 The only species

17862 The only species

17863 Scandent, Lvs. pinnate, Lflts. 6-7 ov.-lanceol. very acute sess. cobwebbed ben. terminat. by large branching tendril, Stip. ellipt. Flws. solit. Lower scales acute and reflexed

17864 Stem winged, Lvs. cord. obl. dentately spinose woolly beneath, Scales of involucr. appendiculate, Rays of pappus [equal truncate
17865 Glabrous, Stem terete, Lvs. amplexicaul. cord. oval spinosely toothed reticulated

17866 Lvs. sessile obl. lanceol. attenuated at the base, Outer scales of involucr. ending each in a long flexuose bristle

17867 Quite glabr. Involucr. 15-toothed, Pappus wanting, Achæna mucron. at apex

17868 Branch. and pedicels pubesc. Involucr. 15-toothed, Pappus of 5 paleæ

17869 The only species

17870 Decumbent, Stem and under side of lvs. tomentose, Lvs. altern. pinnatif. upper ones lin. entire, Pedunc. clong 1-headed tomentose

17871 Lvs. glabr. obovate orbicular acutely toothed petiolate, Petioles ciliated

17872 Stem solid not prunose, Ligulate flowers of the ray without any style

17873 Stem hairy, Lvs. pinnate rather hairy, Lflts. lin. acute channeled some entire and some 3-fid. Peduncles 1-headed

17874 Stem erect branch. Lvs. lanceol. sharply serrated the lower serratures awned, Ligulæ usually 3
17875 Stem and branches erect angular, Lvs. opposite and altern. pinnate, Lflts. 6-8 pairs nar. serrat. dotted, the serrats. of the upper lvs. awned, Peduncles corymbose 1-headed

17876 The only species

17877 The whole plant canescent

and Miscellaneous Particulars.

2735. *Lasthènia* is a genus of ornamental annuals, which may be sown in the open border; and as the plants, under ordinary circumstances, flower in about 6 weeks after the seeds are sown, it will be found necessary to have several sowings to keep up a good appearance.

2736. *Baëria*. An elegant annual, requiring the same management as Lasthènia.

2737. *Eriophyllum* is a desirable and showy herbaceous perennial, is readily increased by division, and thrives in any good garden soil.

2738. *Lagenóphora* is a showy perennial, easily increased by division.

2739. *Ozyùra* 17876 *chrysanthemoides* is an ornamental annual. It may be sown in the open border, where it is intended to remain.

2740. *Cladánthus*. A genus of very ornamental annuals, may be sown the open border.

Page 748. CLASS XX. — GYNANDRIA.

ORCHIDA'CEÆ. — "The uses to which the plants of this family are applied are few, but in several instances highly romantic. In Demerara, that most deadly of all poisons, the 'Wourali,' is thickened by the juice of the Catasetums, and in Amboyna the *true* 'Elixir of Love' is prepared from the minute farina-like seeds of Grammatophyllum speciôsum In Mexico, where the 'language of flowers' is understood by all, the Orchidaceæ seem to compose nearly the entire alphabet Not an infant is baptised, not a marriage is celebrated, not a funeral obsequy is performed, at which the aid of these flowers is not called in by the sentimental natives, to assist the expression of their feelings; they are offered by the devotee at the shrine of his favourite saint, by the lover at the feet of his mistress, and by the sorrowing survivor at the grave of his friend. whether, in short, on fast days or feast days, on occasion of rejoicing or in moments of distress, these flowers are sought for with an avidity which would seem to say that there was 'no sympathy like theirs,'—thus, 'Flor de los Santos,' 'Flor de Corpus,' 'Flor de los Muertos,' 'Flor de Maio,' 'No me olvides' (or 'Forget me not'), are but a few names out of the many that might be cited, to prove the high consideration in which our favourites are held in the New World. Nor are these the only honours that are paid to them: for Hernandez assures us that in Mexico the Indian chiefs set the very highest value on their blossoms, for the sake of their great beauty, strange figure, and delightful perfume, while in the East Indies, if Rumphius is to be credited, the flowers themselves positively refuse to be worn, except by princesses or ladies of high degree. In Honduras, again, the large hollow cylindrical stalks of a fine species of Epidendrum [E. tibicinum] are made into trumpets by the little boys and girls of the country, and the pseudo-bulbs of several of the more succulent species are used instead of resin for the strings of their guitars The following are, however, almost the only known instances in which the tribe do any direct service to mankind. The bulbs of Maxillaria bicolor contain a large quantity of an insipid watery fluid, which is greedily sucked by the poor natives of Peru in the dry season, a fluid of a similar nature is obtained from what is probably a Lælia, in Mexico, and is administered as a cooling draught in fevers; from the roots of some of the orchises, the nutritive substance called 'Salep' is obtained, in New Zealand certain species are of considerable importance as esculents, and in Guiana, the soles of the shoemaker are as much indebted to the viscid matter obtained from the Catasetums and Cyrtopodiums, as are the poisoned arrows of the Indians" (*Bate Orch*, p 2.)

Mr Bateman, speaking of the fragrance of many of this order, says. "We question whether 'Araby the blest' can boast of any pertumes that can at all compete in sweetness with those exhaled by such plants as Angræcum odoratissimum *Lmdl. MSS*, Tetrapeltis fragrans, Aerides odoratum, and Epidendrum aromaticum. Other species emit odours which remind the recipient of the smell of a druggist's shop, of the milk of the cocoa-nut, of fresh hay, of wallflowers, violets, pomatum, aniseed, and angelica, of noyau, cinnamon, allspice, citron, musk, and honey. Some of these yield no fragrance, except in the daytime, but there are others which, like Epidendrum nocturnum and Brassavola nodosa, are aromatic only by night, and there are none, we believe, which are positively offensive at any hour, either of the night or day" (*Ib*, p 4)

The attention and curiosity are excited no more by the beauty and delicacy of the blossoms of many of this tribe, than by the very close resemblances they bear to objects of the animal kingdom In our native species we find the bee, fly, spider, lizard, man, &c, surprisingly imitated, and in those of warmer climates, swans, eagles, doves, pelicans, &c &c.

The cultivation of Orchidàceæ may be mentioned under two heads, namely, that of terrestrial and that of epiphytal Orchidàceæ.

Terrestrial Orchidàceæ should never have a great volume of external air admitted at once, however fine the weather may be To prevent the house (which should have a southern aspect) from becoming too hot, a thick canvass shading should be drawn over it during summer sunshine During the growing season, Orchidàceæ require a moderately moist heat, varying from 65° to 85°, in the dormant season, from 60° to 75° is quite sufficient, in the season of rest the house should be kept dry. Orchidàceæ in pots should be sparingly watered in the growing season, in the dormant state, little or no water should be given The secret of growing these plants is to take care never to kill the old roots when too much water is given, while the plants are in a growing state, almost all the old roots invariably perish (*Paxton* in part)

Epiphytal Orchidàceæ may be grown in the same house with, and receive nearly the same treatment as, terrestrial Orchidàceæ, except that they require to be grown on, instead of in, the soil, attached to blocks of wood, or in baskets, or any rustic construction in the basket way, and suspended from the roof, or by any other suitable means In the outset, before the plants are established on the soil, or wood, where they are intended to be grown, it is very necessary to secure firmly the plant, and such roots as may be already formed, to the wood or soil, by means of bast or pegs, as judgment shall direct The best kind of soil for growing epiphytal Orchidàceæ on is found to be good surface peat, cut into pieces of 1 in to 2 in square, this should be placed over a considerable quantity of drainage, in order to carry off superfluous water, and at the same time, if they are plunged in a tan-bed, will allow the heat to rise more freely than if the pots were entirely filled with soil

"It is of the greatest importance to preserve and encourage the roots, and, as they are generally protruded near the surface of the soil, it should be raised several inches above the level of the pot, in a pyramidal form, in order that they may have full room to push out" (*Bot Reg*)

Syringing the plants moderately, when in a growing state, till the flowers are nearly expanded, helps their growth much

For some other particulars respecting this order, see p. 748. to 767.

Order 1. MONANDRIA. Stamen 1.

1. MALAXI'DEÆ — Pollen cohering in masses of a fine waxy texture, without any of the cellular substance by which the grains are connected, remaining under the form of a distinct gland lying upon the stigma, or of a transparent caudicula between the pollen masses and the gland.

§ 1. *Pleurothállieæ*. Column erect, drawn out a little at the base.

†1894 *Pleurothállis*, page 749.

†1913 *Octomèria*, page 749

2747 *Lepanthes*. Sepals spreading, connate at the base. Petals 2, free and short Labellum 2-lobed at apex, and combined with the column Column elongated, cylindrical, 2-winged. Pollen masses 2.

2748 *Specklinia*. Sepals conniving, equal, distinct; lateral ones saccate at the base, gibbous outside Petals conforming to the sepals, but much smaller Labellum free, saccate at base. Column short, free, membranaceously winged. Anther 1-celled. Pollen masses 2. (No species given.)

†1924 *Stélis*, page 750

2749. *Obcrònia* Sepals spreading or reflexed, usually equal, free. Petals smaller than the sepals Labellum ascending, of various forms, usually elongated, always more or less 4-lobed Column small, free. Stigma elevated Anther 2-celled Pollen masses 2, pear-shaped, solid. (No species given)

†1927. *Micróstylis*, page 750

†1925. *Malàxis*, page 750

†1882. *Corallorhiza*, page 749.

2750. *Aplectrum*. Petals equal, connivent Labellum unguiculate, not drawn out at the base. Column free. Anther seated below the summit of the column Pollen masses 4, oblique, lenticular.

2751. *Acánthus* Sepals subringent, acumin, free Petals smaller, acum. Labellum free, entire, bicallous at base, with a naked disk. Column semiterete, clavate Anther term, recumbent, 2-celled. Stigma ovate, transverse Pollen masses 8.

†1928 *Liparis*, page 751

2752. *Calìia*. Sepals distinct, equal, spreading Petals nearly equal, but a little smaller than sepals. Labellum

quite entire, ungiculate, continuous with the base of the column. Column short, continuous with ovarium, drawn out a little at base Anther 2-celled. Pollen masses 4, by pairs.
†1904 *Pholidòta*, page 749
†1897. *Cœlógyne*, page 749.

§ 2. *Dendrobièæ*. Column recumbent, drawn out much at the base.

2753 *Megaclinium*. Sepals erect, unequal, lateral ones the smallest, combined with the column. Petals short. Labellum short, quite entire, articulate with the base of the column. Column short, marginate, disk-formed. Anther obsoletely 2-celled. Pollen masses 4, cohering by pairs.
2754. *Bolbophýllum* Sepals erect, acumin, nearly equal, lateral ones combined, or connate with the base of the column, and oblique at the base. Petals short Labellum articulated with the foot of the column, unguiculate, usually entire. Column short, bidentate or 2-horned in front Anther 2-celled. Pollen masses 4, free, very unequal sometimes combined in one, and sometimes cohering by pairs
2755. *Cirrhopétalum*. Sepals ringent; lateral ones acumin., drawn out at the base, adnate to the column, much longer than upper one. Petals short, apiculated Labellum entire, articulated with base of column. Column small, drawn out at base, and furnished with 2 petaloid horns at top Anther 2-celled. Pollen masses 4, 2 inner ones smaller
2756 *Trias*. Sepals equal, ovate, spreading, connate at the base Petals small, erect. Labellum small, undivided. Column short, semiterete, emarginate, free. Anther 2-celled, drawn out into a petaloid, cuneated, emarginated membrane at the apex. Pollen masses 4, 2 inner ones smaller
2757. *Bryóbium*. Flowers villous Sepals conniving, lateral ones equal at the base. Petals narrower and shorter than the sepals, reflexed between them. Labellum undivided, unappendiculated, constricted at the base. Column short Pollen as in Eria
†1912. *Eria*, page 749.
2758 *Aporum* Sepals fleshy, erect, lateral ones larger, oblique, connate with the column Petals smaller than upper sepal. Labellum articulated with foot of the column, undivided, or 3-lobed. Limb crested, callous, or naked. Column semiterete, drawn out at base. Anther sess., 2-celled, sometimes membran. at apex. Pollen masses 4, collateral by pairs.
†1908 *Polystachya*, page 749
†1900 *Dendróbium*, page 749.
2759. *Paxtònia* Sepals 6, spreading, equal Labellum conforming to the petals. Column erect, terete, subclavate a little shorter than the petals. Anther termin., opercular, deciduous. Pollen masses 8, narrow, clavate, cohering at tops.

II. EPIDE'NDREÆ — Pollen cohering in masses of a fine waxy texture, with cellular substance. Caudiculæ not transparent, and connected with the stigma by means of a gland, as in *Vánda*, but powdery, and very often turned back on the face of the pollen masses Anther terminal, opercular.

†1907 *Epidéndrum*, page 749
2760 *Dinèna* Sepals and petals nearly equal, spreading Labellum large, membranous, undivided, unguiculate, combined with the base of the column. Column short, bicornute. Anther 2-celled. Pollen masses 4, adnate by pairs to 2 replicate caudiculæ
2761 *Encýclia* Sepals and petals nearly equal, connivent. Labellum cuculate, involving the columns, 3-lobed at apex, callous at base. Column free, semiterete, clavate, parallel with the labellum. Anther 4-celled, with marginate dissepiments. Pollen masses 4. Collateral caudiculæ 4, revolute
2762 *Chýsis*. Sepals a little connate, spreading Petals conforming to the sepals Labellum 3-lobed, spreading; Column marginate, channeled, rustic. Anthers roundish, glabrous Pollen masses 8, the four outer ones thin, and the four inner ones thicker, beak convex.
2763 *Physinga* Sepals membranous, equal, connate at the base Petals small, obliquely adnate to the base of the sepals Labellum fleshy, tubercular, undivided, connate with the base of the column, and furnished with a bladder-formed sac at the base. Column fleshy, short, 2-lobed, antheriferous at the base. Pollen masses 4, adnate to 2 twin powdery threads.
†1903 *Isochilus*, page 749
2764. *Hartwegia* Perianth spreading, coloured. Lateral sepals drawn out at the base, adnate to the labellum Labellum connate with the column, gibbous at base, ovate. Anther 4-celled. Pollen masses 4. Caudiculæ replicate.
†1914 *Brassavóla*, page 749
2765. *Læ'lia* Sepals flat, lanceol, equal Petals larger than sepals, fleshy, flat Labellum 3-parted, lamellate, twisted round the column Column wingless, fleshy, channeled in front Pollen masses 8, with 4 elastic caudiculæ
2766 *Schombúrgkia* Sepals and petals similar, spreading, all free and equal at the base. Labellum difformed, membranous, 2-3-lobed, cucullate, connate at the base, with the margin of the column tumid above the base with lamellate veins Column marginate. Pollen masses 8.
†1906 *Cattléya*, page 749
†1905. *Broughtònia*, page 749
2767 *Leptóles* Sepals and petals linear, nearly equal, spreading. Labellum 3-lobed, parallel with the column Lateral segms. short, convolute around the column, middle segm. obl with reflexed margins Column short, thick, semiterete. Pollen masses 6, incumbent, 2 upper ones pear-shaped, oblique, compressed; 4 lower ones unequal and thinner.
†1911. *Blétia*, page 749
2768 *Cýbe* Sepals and petals similar, lanceol conniving, lateral ones oblique at the base. Labellum large, membran., cucullate, never expanded, half-connate with the clavate marginate column
2769. *Pescomèdia* Sepals nearly equal, free, deciduous. Petals conform adnate to the base of the column, persistent. Labellum connate with the base of the column, gibbous at the base, with an undivided convolute limb. Column clavate, semiterete. Pollen masses 4, cuneate
2770. *Phàtus*. Sepals and petals nearly equal, spreading, free. Labellum usually cucul., adnate with the base of the column, spurred, entire, or 3-lobed, usually keeled, lamellose or crested above. Column erect, continuous with the ovarium, semiterete, marginate, elongated. Anther 8-celled. Pollen masses 8, nearly equal.

III. VA'NDEÆ — Pollen cohering in masses of a fine waxy texture Caudiculæ separating along with the gland of the stigma, and forming a strict adhesion with the pollen masses. Anther terminal, rarely dorsal, opercular.

2771. *Nanódes* Perianth ringent Upper sepal arched, lateral ones connate to the labellum at the base. Petals conforming to the lateral sepals, free Labellum fleshy, undivided, connate with the column. Column winged. Anther 2-celled, beaked Pollen masses 4, collateral, sessile
2772 *Aspásia*. Perianth spreading, equal, lateral sepals free, the upper one connate with the petals at the base. Labellum oblong, concave, spurless, obsolctely 4-lobed, half-connate with column Column parallel with the labellum, semiterete, marginate. Pollen masses 2, pear shaped, furrowed behind. Caudiculæ flat, cuneated.
†1902 *Ornithidium*, page 749.
2773 *Sophronítis* Perianth spreading. Sepals nearly equal, imbricated, free Labellum entire, cucul., connate with the base of the column, with a simple transverse crest in the middle. Column free, winged on both sides at the apex. Anther 8-celled Pollen masses 8.
†1890. *Trizeùxis*, page 749.
†1910. *Ornithocéphalus*, page 749.
2774. *Cirrhæ'a* Perianth spreading Sepals free, equal. Petals linear, flexuose Labellum unguiculate, continuous with the column, tripartite. Column erect, clavate, terete, with a nearly square horizontal stigma, and a

tendril beak. Anther dorsal, membranous, subunilocular. Pollen masses 2, parallel, oblong, compressed, with a short-horned caudicula, and an incurved gland.

2775. *Sarcochilus* Perianth spreading. Lateral sepals connate with the claw of the labellum beneath Petals conform to the sepals. Labellum spurless, continuous with the claw of the labellum, slipper-shaped; middle lobe fleshy, solid Pollen masses 2, sessile on a deltoid gland.

†1892. *Maxillaria*, page 749

†1891. *Xylóbium*, page 749.

2776 *Bifrenaria* Sepals spreading, free, nearly equal. Lateral one adnate to the produced base at the column. Petals about half the size of the sepals. Labellum articulated to the mucronate base of the column, cucullate, 3-lobed, callous in the middle. Column short, semiterete, mutic. Anther mutic, somewhat crested. Pollen masses 4, incumbent, with two distinct caudiculæ

2777. *Trigonidium* Sepals equal, cohering into the form of a trigonal cup, spreading at the top Petals about half the size of the sepals, veiny. Labellum short, 3-lobed, articulated with the column, fleshy in the middle Column short, free, semiterete Anther 1-celled Pollen masses 4, cohering. (No species given)

2778. *Trichoplilia* Sepals and petals equal, spreading, narrow. Labellum large, petaloid, convolute, parallel with the column, 3-lobed Column terete, clavate Anther 1-celled, compressed, convex in front. Pollen masses 2, adhering to a slender cuneate caudicula. Gland small

2779 *Dicrypta* Sepals free, erect, equal Petals conform to the sepals, but smaller. Labellum 3-lobed, fleshy, articulated with the column Column continuous with the ovarium, semiterete, clavate in front at the base Anther obsoletely bilocular Pollen masses 4, flattened, incumbent, with a short linear caudicula, and a binate gland

2780. *Govénia* Perianth bilabiate Lateral sepals falcate Petals conniving under the upper sepal Labellum quite entire, spurless, concave, articulated with the column, sessile Column terete, margined on both sides at the apex, drawn out a little at the base. Anther hood-formed, 1-celled. Pollen masses 4, solid, incumbent, with a short caudicula, and a small triangular gland

2781 *Batemannia* Flower ringent Sepals spreading, lateral ones unguiculate Petals broader than sepals, oblique at base, adnate to the produced base of the column Labellum articulate to the column, 3-lobed, cucullate Column semiterete. Anthers small, 2-celled, membranous. Pollen masses 2, 2-lobed behind, with a triangular gland and no caudicula.

2782 *Cycnóches* Perianth spreading. Lateral sepals lanceolate, upper one narrow. Petals broader than sepals, falcate Labellum free, spurless, lanceolate, quite entire, continuous with the column, with an abrupt callous claw Column elongated, arched, clavate at apex, furnished with two falcate auricles Anther 2-celled. Pollen masses 2, furrowed, with a linear caudicula and a thick gland

2783 *Myánthus*. Perianth flattened. Sepals free, equal, similar to the petals, but narrower. Labellum flat, obovate, tridentate, shorter than the sepals. Column erect, terete, bicirrhose at the base. Anther and pollen masses as in Catasétum.

†1889. *Catasétum*, page 749.

2784. *Monachánthus* Perianth flattened. Sepals and petals equal, turned backwards Labellum fleshy, undivided, ventricose, much larger than the sepals. Column short, thick, mutic. Anther and pollen masses as in Catasétum.

2785 *Mormòdes*. Upper sepal a little arched, narrow, lateral ones reflexed Petals broader than the sepals, erect Labellum ascending, 3-lobed, cuneated, apiculated, articulated with the column. Column semiterete, mutic. Pollen masses 4, connate by pairs, fixed to thick caudicula, and adhering to thick fleshy gland.

2786 *Stanhópea* Perianth membranous, spreading, or reflexed Sepals free, subundulated. Petals narrower than sepals Labellum free, spurless, fleshy, and horned on both sides Column very long, marginate. Anther 2-celled Pollen masses 2, elongated, cleft, caudicula shorter than the 2-lobed gland

2787. *Gongòra* Perianth flattened. Lateral sepals free, upper one connate to the back of the column Petals smaller, adnate to the middle of the column. Labellum continuous with the base of the column, free, unguiculate Column very long, arched, clavate, marginate. Anthers subbilocular. Pollen masses 2, linear, sessile on a cuneated caudicula.

2788 *Coryánthes*. Perianth spreading. Sepals dilated, flexuose, conduplicate. Petals erect, much smaller than the sepals Labellum large, unguiculate, galeate, continuous with the base of the column, 3-dentate Column terete 2-horned at the base, elongated, recurved at apex, 2-winged Anther 2-celled. Pollen masses 2, compressed, sulcate behind, with a linear arched caudicula and a lunate gland

2789. *Anguloa* Perianth globose Sepals and petals free, concave, nearly equal. Labellum unguiculate, cucullate, 2-lobed, with an intermediate reflexed segment Column semiterete, clavate, 2-horned at apex. Anther beaked Pollen masses 2, with a lanceolate caudicula and small ovate gland (*No species given*)

2790 *Peristèria* Perianth globose Sepals somewhat connate with the base of the labellum. Petals smaller than the sepals Labellum erect, articulated in the middle. Column erect, semiterete, dilated at the base. Anther crestless 2-celled. Pollen masses 2, cleft behind. Gland sessile, naked, involving the beak.

†1885. *Cymbidium*, page 749

†1901. *Camaridium*, page 749.

2791 *Gróbya* Perianth flattened, bilabiate Lateral sepals connate at the base. Upper sepal erect, shorter Petals dilated, erect, connivent, much larger than the sepals Labellum 3-lobed, naked, articulated with the base of the column, smaller than the sepals. Column erect, semiterete, arched, thickened at the base. Pollen masses 2-lobed behind, adnate to two short caudiculæ Gland oval

2792 *Acropera*. Sepals spreading, upper one galeate, lateral ones divaricated. Petals short, oblique, truncate at apex Labellum unguiculate, articulate at the base of the column, 3-lobed, the middle lobe smaller and saccate Column erect, marginate, saccate at the base. Pollen masses 2, linear, convolute, with a linear subulate caudicula and a minute gland Beak subulate

2793 *Grammatophýllum* Perianth flattened, spreading Sepals and petals nearly equal Labellum articulate with the column, short, 3-lobed, cucullate Column arched, erect, semiterete, callous at the base Anthers subbilocular Pollen masses 2, globose, sulcate at the base, sessile upon the extremity of an arched gland.

†1888 *Geodórum*, page 749.

2794 *Sobralia* Perianth large, rather fleshy, flattened, spreading Sepals and petals nearly equal. Labellum cucullate, involving the column, narrowed at the base, 2-lobed. Column erect, elongated, marginate, clavate, winged on both sides at the apex Anther 2-celled Pollen masses 2, with a linear caudicula

2795 *Acanthophippium* Perianth ventricose Sepals agglutinate. Lateral sepals adnate to the claw of the column Labellum unguiculate, articulate with the base of the column, 3-lobed, complicate, with a lamellate disk Anther fleshy, 2-celled Pollen masses 8, unequal, sessile

†1929. *Calýpso*, page 750

†1920. *Eulophia*, page 759

2796 *Dipódium* Perianth spreading Petals and sepals equal. Labellum auricled on both sides beneath the middle, bearded in the disk, saccate at the base, and connate with the column. Column erect, marginate, semiterete Anther membranous, 2-celled. Pollen masses 2, obliquely 2-lobed, fixed to two caudiculæ.

2797. *Galeándra*. Perianth spreading or connivent. Sepals and petals ascending, free Labellum funnel-shaped, spurred, undivided, sessile, sometimes fringed on the margin. Column erect, winged. Anther helmet-shaped, with a recurved crest Pollen masses 2, excavated behind, with a short caudicula and elongated gland.

2798. *Zygopétalum*. Perianth flattened Sepals and petals ascending, nearly equal, connate with the claw of column Labellum mutic, undivided, spreading, with an ascending claw and large transverse fleshy crest. Column short, arched, semiterete Anther subbilocular Pollen masses 2, almost sessile on a transverse gland.

2799. *Huntleya*. Perianth flattened, nearly equal Lateral sepals involute at the base in front. Labellum flat, unguiculate, spreading, rhomboid, fringed at the base, articulated with the base of the column. Column clavate, cucullate at apex, winged in the margin Anther 2-celled, mutic Pollen masses 4.

2800. *Stenia*. Perianth flattened, nearly equal Lateral sepals oblique at the base. Labellum continuous with

the base of the column, concave, appendiculated in the disk. Column semiterete, drawn out at the base, rounded at the apex, mutic. Anther 2-celled. Pollen masses 4, linear, twin, dorsal one small. Caudicula nearly square, acute

†1896 *Cyrtopódium*, page 749

2801. *Cyrtopèra*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of the column. Labellum spurless, concave, 3-lobed, with callous crested or tubercled veins. Column semiterete, marginate Anther 1-2-celled. Pollen masses 2, 2-lobed behind, with a short subtriangular caudicula.

†1887. *Lissochilus*, page 749

†1893 *Notília*, page 749

2802 *Masdevállia*. Perianth closed. Sepals acuminate, or awned, connate into a campanulate tube. Petals short. Labellum short, oblong, concave, entire, articulated with the column. Column erect, linear, channelled. Pollen masses 2, with a short caudicula

2803 *Cryptochilus* Perianth tubular, contracted at the throat, gibbous in front at the base. Sepals connate, except at the apex. Petals free, rather smaller than the sepal Labellum undivided, free, continuous to the base of the column. Column semiterete. Anther 2-celled. Pollen masses 8, adhering by pairs to common glands.

†1919. *Ionópsis*, page 751.

2804 *Quekéttia*. Perianth cylindrical Sepals linear, equal, gibbous at the base, lateral ones connate. Petals linear, of equal length. Labellum oblong, entire, mutic, parallel with the column, excavated at the base, bicallose. Column semiterete, erect, auricled on both sides at the apex Anther 1-celled. Pollen masses 2, excavated behind, with a linear caudicula and a minute gland.

†1883 *Rodriguezia*, page 749.

†1884. *Gomiza*, page 749

2805 *Burlingtònia* Perianth membranous, convolute, oblique. Sepals unguiculate, shorter than the labellum; lateral ones concave at the base, connate. Petals unguiculate, parallel with the labellum Labellum 2-lobed, parallel with the column, with a channelled lamellate claw Column terete, clavate Stigma horned on both sides. Anther 1-celled Pollen masses 2, excavated behind, adnate to a subulate elastic caudicula

2806 *Comparéttia* Perianth ringent Middle sepal and petal short, free, somewhat galeate; lateral ones connate, one-spurred Labellum free, flattened, obcordate, unguiculate, furnished with 2 spurs, which are hidden within the spur of the sepals Column free, erect, mutic. Pollen masses 2, adnate to beaked cuneated caudicula.

†1898 *Macradènia*, page 749

†1909 *Cyptarrhena*, page 749.

†1895 *Oncidium*, page 749

2807 *Fernandèzia* Perianth spreading Sepals free. Petals conniving under the upper sepal. Labellum spurless, free, 3-lobed, tubercled on the disk Column short, eared on both sides Anther 2-celled. Pollen masses 2, obovate.

2808 *Scaphyglóttis* Sepals connivent Lateral ones drawn out at the base, a little connate with the foot of the column, upper one linear, convex Petals a little shorter than the sepals Labellum oblong, channelled, continuous with the column, with a repand margin Column marginate Pollen masses 4, sessile on a cuneated gland.

2809 *Pachyphýllum*. Perianth connivent Sepals and petals free, equally acute. Labellum free, undivided, sessile, furnished with one tubercle at the base, and two at the apex Column petaloid. Pollen masses 2. (No species given)

2810 *Dichæ'a* Perianth connivent Sepals and petals free, acute, equal Labellum unguiculate, naked, spurless, deltoid, articulated with the column. Column erect, terete, wingless. Anther 2-celled. Pollen masses 4, by pairs, collateral, with a cuneate caudicula and a minute gland

2811 *Miltònia*. Perianth flattened. Petals revolute, and lateral sepals connate at the base, sessile. Labellum large, dilated, undivided, sessile, connate with the column, lamellate at the base. Column short, semiterete, eared at the apex Pollen masses 2, adnate to an oblong caudicula.

2812 *Cyrtochilum* Perianth flattened Sepals free, lateral ones unguiculate Petals a little smaller than sepals. Labellum free, undivided, continuous to the base of the column, with a tuberculated claw. Column short winged. Anther 2-celled Pollen masses 2, with a filiform caudicula and a minute gland

†1886 *Brássia*, page 749.

2813 *Tetrapéltis* Perianth somewhat spreading Sepals free, equal Petals very narrow, of equal length Labellum free, sessile, saccate, geniculate, 3-lobed. Column erect, length of petals semiterete, clavate. Rostellum straight. Pollen masses 4, globose, pitted behind, adhering by pairs to two narrow caudiculæ connected by a common gland

2814 *Phalænópsis* Perianth flattened, spreading Sepals free Petals larger than the sepals, dilated. Halalellum connate with the column, free, 3-lobed, callous at the base, middle lobe narrower, bicirrhose. Column lying upon the ovarium, semiterete Rostellum gladiate. Anther 2-celled. Pollen masses 2, nearly globose, with a flat spatulate caudicula and a large caudate gland.

†1916 Vánda, page 750

2815 *Camarótis* Perianth flattened. Lateral sepals connate with the back of the labellum, free at apex. Petals a little smaller than the sepals, free Labellum obovate, channelled, appendiculate at apex. Column erect, terete, free, beaked Anther dorsal, apiculate, subbilocular. Pollen masses 2, with a very long subulate caudicula and a forked rostellum.

†1918. *Renanthèra*, page 750.

2816 *Micropèra*. Perianth equal, spreading Lateral sepals adnate to the base of the labellum. Labellum continuous with the base of the column, slipper-shaped, 3-lobed, middle lobe very small. Column short, with a large inflexed rostellum. Pollen masses 2, with a subulate caudicula

2817 *Succolàbium*. Perianth flattened, spreading Sepals equal to the petals, lateral ones usually largest. Labellum undivided, spurred, connate with the base of the column Column erect, semiterete, with subulate rostellum. Anther semibilocular. Pollen masses 2, nearly globose, with an elongated caudicula and a minute gland.

2818 *Cleisóstoma*. Sepals and petals spreading, linear, nearly equal Labellum spurred, connate with the base of the column, 3-dentate. Column semiterete. Anther semibilocular. Pollen masses 2, 2-lobed, nearly globose, with a filiform caudicula and a hooked minute gland (No species given)

†1915 *Sarcánthus*, page 750

2819 *Œccóclades*. Perianth spreading, ringent, or connivent, nearly equal, free Labellum free, sessile, articulate with the column, spurred, naked, or bilamellate at the base. Column elongated, semiterete. Anther 2-celled. Pollen masses 2, furrowed behind, with a narrow caudicula and a minute gland.

†1917 *Aérides*, page 750

†1922. *Aeránthes*, page 750.

†1921. Angræ'cum, page 750

2820 *Trichocentrum*. Perianth spreading, free, equal Labellum sessile, spurred, flat, 2-lobed, lamellose at the base, connate with the base of the column. Column short, semiterete, thick, winged on both sides. Anther 2-celled, mutic Pollen masses 2, complicate, with a cuneated caudicula and a minute gland

†1923 *Calánthe*, page 750.

IV OPHRY'DEÆ. — Pollen cohering in innumerable waxy masses, collected on a cobwebbed elastic axis, fixed to the glands of the stigma. Anther terminal, erect, or resupinate, persistent, with complete cells.

†1859 *Orchis*, page 748.

†1864. *Anacámptis*, page 748.

†1867. *Chamóorchis*, page 748.

†1861. *Habenaria*, page 748

2821. *Bonátea.* Perianth and anther of Habenària. Upper lip of stigma free, cucullated, or complicated; process of the stigma sometimes long and sometimes short

2822. *Cynórchis* Sepals equal, connivent Petals fixed under the upper sepal. Labellum connate with the column, spurred, usually 4-parted Sepals larger than the petals, and of a different texture. Column short. Anther horizontal or resupinate, with distinct elongated cells. Rostellum flat, 3-partite. Pollen glands naked. Lobes of stigma 2, fleshy.

†1862 *Bartholina*, page 748.
†1856. *Satyrium*, page 748.
†1855. Disa, page 748.
†1862 *Serapias*, page 748

2823 *Pterygódium* Perianth subringent Lateral sepals exterior, horizontal, concave. Labellum inserted in the middle of the column, between the remote cells of the anther.

2824. *Corycium.* Perianth ringent. Petals equal at the base, erect; lateral ones connate. Petals free, concave. Labellum unguiculate, connate with the face of the column, appendiculate in front. Anther dorsal, resupinate. Glands naked.

†1806. *Ophrys*, page 748.

2825 *Disperis.* Perianth ringent, of 4-5 sepals. Lateral sepals exterior, horizontal, somewhat spurred Labellum erect from the base of the column, and connected with it. Anther revolute, drawn out in two segments, which are bent in front.

V. GASTRODIE'Æ. — Anther terminal, opercular. Pollen masses cohering in granules, which finally become waxy, and are indefinite in number.

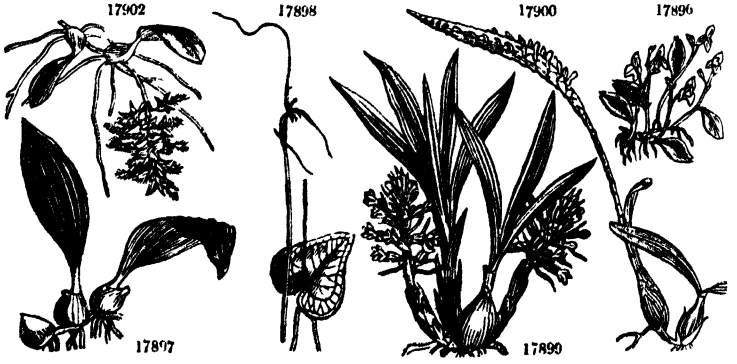
2826. *Gastrodia.* Perianth tubular, 5-lobed. Lobes secund. Labellum closed, free, unguiculate, lying on the column Column long, hollow at top. Anther deciduous, with approximate cells. Pollen masses large, composed of numerous angular particles.

VI. ARETHU'SEÆ. — Anther terminal, opercular. Pollen masses as in tribe Neottieæ.

†1881. *Calcana*, page 749

2827. *Corysanthes* Perianth ringent. Helmet large. Lower lip 4-parted, short, hidden by the labellum. Labellum large, cucullate, or tubular Anther 1-celled, 2-valved, persistent Pollen masses 4, powdery.

2828. *Pterostylis* Perianth ringent, 4-leaved, inner leaflet bifid Labellum unguiculate, almost enclosed, appendiculate, or gibbous at the base Column connate with the base of the galea, winged at apex. Anther persistent, with approximate cells. Pollen masses 2 in each, all compressed, powdery



†1877 *Arthrasa*, page 749
†1879 *Pogonia*, page 749.
†1878 *Calopogon*, page 749

2829 *Glossodia* Perianth of 5 equal spreading sepals Labellum dissimilar, short, undivided, glandless. Appendage between the column and the labellum. Anther terminating the membranous dilated column, with approximate cells Pollen masses 2 in each cell, compressed, powdery

2830 *Chloræa.* Perianth membranous Outer sepals nearly equal, lateral ones deflexed, upper one, along with the inner ones, conniving into a galea. Labellum sessile, cucullate, entire or 3-lobed, with a crested disk Column elongated, semiterete, marginate. Anther 2-celled Stigma lying on the top of the column. Pollen masses 2, bipartite, cohering behind.

†1880 *Epipdctis*, page 749.

2831 *Caladènia*. Perianth bilabiate, glandular outside. Upper lip flattish. Labellum unguiculate, cucullate, somewhat 3-lobed, or narrowed at the apex, ornamented with rows of glands in the disk Column membranaceously dilated. Anther persistent, with approximate cells. Pollen masses 2 in each cell, compressed, half 2-lobed, powdery.

2832. *Eriochilus*. Perianth bilabiate Outer lateral sepals unguiculate; inner ones erect, smaller. Labellum unguiculate, inappendiculate, with a pubescent glandless disk. Column semiterete, simple at top. Anther persistent, mutic, with approximate cells. Pollen masses 4 in each cell.

2833. *Chiloglóttis*. Perianth bilabiate Outer lateral sepals channelled, and terete at the apex. Labellum unguiculate, glandular in the disk, and furnished with a tongue-shaped appendage at the base. Column bifid at apex. Anther persistent, with proximate cells. Pollen masses 2 in each cell, compressed, powdery.

2834. *Cyrtóstylis* Perianth bilabiate. Sepals mutic, 4 lateral ones nearly equal, spreading. Labellum dissimilar, stretched out, flat, obtuse, undivided, bicallose at the base. Column semiterete, dilated at apex. Anther persistent, with approximate cells Pollen masses as in Chiloglóttis

2835 *Micrdtis*. Perianth ringent. Outer lateral sepals sessile; inner ones almost similar, ascending. Labellum dissimilar, oblong, obtuse, callous at the base Column funnel-shaped. Anther furnished with a membranous auricle on both sides. Pollen masses 2 in each cell, powdery, fixed by the base.

VII. NEOTTIE'Æ. — Anther parallel with the stigma, and erect. Pollen masses simple, or consisting of granules in a loose state of cohesion.

†1874. *Spirdnthes*, page 749.
†1875. *Stenorhýnchos*, page 749.
†1873. *Neóttia*, page 749.
†1876 *Listera*, page 749.

2836 *Pelézia*. Sepals conniving into a cylinder. Outer lateral ones dependent, connate with the base of the column. Labellum entire, stretched out, spurred at the base, connate with the ovarium.

2837 *Sauroglóssum* Perianth connivent Lateral sepals linear, arcuately spreading, running into the ovarium at the base. Labellum linear, channelled, callous at the base Column elongated, semiterete, drawn out at the base, and somewhat spatulate at the apex. Rostellum ovate. Pollen masses 2, 2-lobed, with a very short caudicula.

†1870. *Goódyera*, page 748

2838. *Anœctochilus* Perianth ringent. Upper sepal, along with the petals, forming a galea; lateral sepals spreading. Labellum connate with the column at the base spurred, with a channelled inflexed claw, and a 2-lobed spreading limb Column short, with membranous, dilated, involute margins.. Stigma bicallous at the base. Pollen masses 2, powdery, 2-lobed, with very short caudicula, and an oblong gland.

†1872. *Ponthièva*, page 748..

2839 *Cránichis*. Perianth resupinate, subringent Labellum arched. Anther as in Neóttia.

†1926. *Prescóttia*, page 750

2840 *Calochilus* Perianth ringent. Inner sepals sessile, smaller than the outer ones, erect. Labellum longer than the sepals, sessile, acuminated, with the margins and disk bearded. Anther parallel with stigma, persistent.

2841 *Prasophýllum*. Perianth ringent, galea in front, 2 outer sepals usually cohering, inner ones unequal-sided. Labellum ascending, undivided, spurless, unguiculate. Column bipartite Anther parallel with the stigma, persistent. with approximate cells. Pollen masses 2 in each cell, powdery, fixed to the top of the stigma.

†1871 *Diúris*, page 748
†1930. Vanilla, page 751.

[obl. cucul denticu with 5 crests in the disk, Spur emarginate
17934 Caulescent, Lvs obl lanceol. acute glauc beneath, Sepals and petals obl. lanceol acute nearly equal, Labellum

17935 The only species

17936 Pseudo-bulbs obl 2-edged, Sepals lin. obl. Petals somewhat rhomb acute, Lateral lobes of labellum recur Mid. one fleshy serrated

17937 Pseudo-bulbs obl cylind. 1-lvd. Petals ellip. round. Sepals obl lanceol. smaller, Labellum small 3-lobed, Mid. lobe flattish acumin.

17938 Lvs. obl. lanceol. Petals lin arched, Mid lobe of labellum cuneated equal to lateral ones

17939 Lvs. obl. lanceol. Petal lin. spatulate, Labellum sagit. Mid lobe lin. abruptly acute, Lateral ones acumin.

17940 The only species

17941 Pseudo-bulbs oval obl. compressed smooth bearing a sol lin ligul leaf, Pedunc. 1 flwd Petals and sepals erect obl acute, Labellum obscurely 3-lobed
[obovate obl undivided
17942 Lvs obl lanceol acumin plicate, Scape radical many-flwd Sepals ovate concave, Petals smaller, Labellum
17943 Pseudo-bulbs ovate bearing a sol obl lanceol plicate leaf, Scape pendu 2-flwd Sepals and petals lanceol acute equal, Labellum 3-part. Mid lobe fringed
17944 Pseudo-bulbs roundish compressed bearing 2-obl lanceolate Lvs Scape 1-2-flowered, Sepals keeled, Labellum 3-lobed
17945 Pseudo-bulb compressed tetragonal bearing a sol 3-nerv leaf, Flws. racem Petals oval 2 lower ones drawn out into a horn at base, Labellum obovate subtrilobed crested
17946 Pseudo-bulb ovate bluntly angular bearing a lanceol chan leaf, Raceme droop Labellum cuneate 3-lobed, Mid lobe 2-lobed crenulated

17947 Pseudo-bulb roundish compressed 2-lvd Lvs obl plicate, Raceme erect, Lateral lobes of labellum semicord Mid. one transverse subundulated callous at the base

17948 The only species

17949 The only species

17950 Labellum ovate cord Spike cylind Bracteas acumin Lvs. obl acum narrowed at the base
17951 Labellum ovate cucul at base, Spike obl Bracteas obl cucul Lvs obovate lanceol Root tuberous

17952 The only species

[short winged claw, Column slender arched clavate on both sides
17953 Sepals lin obl Lateral ones ovate obl pendulous, Petals obl lanceol Labellum spreading obl entire with a
17954 Sepals and petals lanceol acumin reflexed, Labellum entire ventricose acumin. callous at the base with a short claw, Column arched much shorter than upper sepals

17955 Labellum not bearded

17956 Labellum bearded with succulent hairs

17957 Two innner calycine segments spotted, Labellum ciliated
17958 Leaves linear-lanceolate, Perianth spreading obsoletely dotted, Labellum ventricose incurved at apex ciliated

17959 Leaves oblong 5-plicate, Perianth globose scarcely spotted, Labellum ventricose straight at apex

17960 Raceme loose many-flwd Labellum hemispherical with flat margins and fringed in the middle

17961 The only species

17962 Labellum constricted in the middle, Flws pendulous

17963 Lateral sepals large roundish oblong much broader than the petals
17964 Labellum oblong constricted in the middle, Scape erect 2-flwd shorter than the petals
17965 Labellum obl constricted in the middle, Scape pendulous 2-flowered twice as long as the petals

History, Use, Propagation, Culture,

2842. *Ceratiola* 18036 *ericoides* is a small heath-like evergreen shrub, grown in British gardens in peat soil, and may be propagated by cuttings.

18024 The only species

18025 The only species

18026 Lvs ovate or oval acute discoloured, Spike generally 4-flwd Outer sepals pubescent, Label.um multifid towards the base, Sack of labellum subdidymous

18027 Root fascicled filiform tomentose, Radical lvs spatulate ovate, Cauline ones sheathing, Flowers spreading, Labellum dotted inside

18028 Labellum a litte longer than the perianth furnished with a semilanceol acum point, Column 2-gland. at the base, Spike 4-8-flwd

18029 Ovaria obovate 3 times longer than bractea, Sepals acumin. hlud ones cohering at the base

HEXANDRIA.

[Lip cord cuspid the cusp twisted filiform

18030 Lower lvs remf 6-angular 3-lobed, Upper lvs 3-partite, Cal cylind ventricose and 6-spurred at the base,
18031 Lvs remf emarg undul pubesc beneath, Limb of cal ventric at base obl oblique emarg on both sides
peduncl 1-flwd bractless pubesc [one longer inflated with a broad emarg. undul lamina
18032 Glabrous, Lvs cord. remf Flws solit Tube obov Limb cylind bilabiate, Upper lip lanceol acute, Lower
18033 Glabrous, Stems furrow Lvs 3-lobed, Cal cylind inauv Lip cord cusp Appendage 6-parted reflexed
[more silky beneath above, Flws forming large pouch, Throat circular vertical
18034 Lvs 12 to 15 in long and 4 in broad scarf ovato-cord atten at apex slightly waved and sinuat ent edges
18035 Glabrous, Lvs cord remif Peduncl 1-flwd, Tube of perianth obliquely ventric at base stretched out from the mid to the apex cylindrical, Limb orbicul cihated

---

Order 7. POLYANDRIA Stamens more than 6.

2844 *Pterocárya* Male flws in spikes Stams in a flower many Female flws in long pendulous spikes, and distant, sessile, and without bracteas Cal connate with the ovary, except in a terminal portion, which is cleft into 2 3-5 unequal lobes. Ovary, and the part of the cal that is connate with it, taken together, flaggon-sh , bearing 2 wings above the base Cell 1 Ovule 1, erect Fruit subdrupaceous, angled, not opening, containing a bony nut. Embryo without albumen

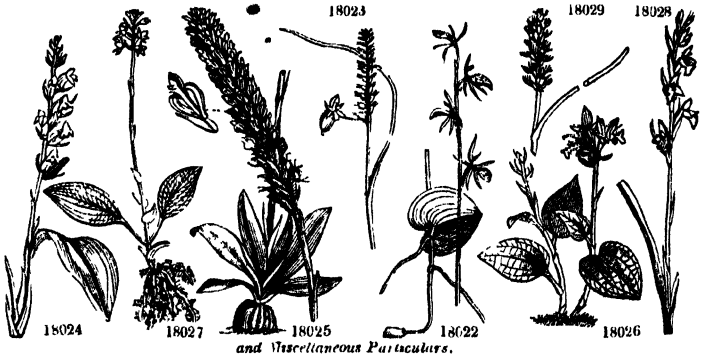
Order 8. MONADELPHIA Stamens united into a single body

2845 *Picea* Differs from *Pinus* and *Abies* in having the cones erect The strobile is cylindrical, and has its carpels not thickened at the tip Both carpels and bracteas separate from the axis of the strobile , and the leaves are obviously 2-ranked in direction

---

DIANDRIA.

18036 Flws in axils of upper lvs solitary except a small abortive one by the side of the principal flower



TETRANDRIA.

18037 The only species

POLYANDRIA.

[both surfs green ab blood-red ben.

18038 Stems several from crown of root, Lvs subpelt. uneq.-cordate acumin leathery succulent glabr. and shining on

and Miscellaneous Particulars.

2843. *Sarcocócca* The stigmas of this plant are so like those of the common box, that, in the absence of fruit, there would be little apparent reason to suspect a difference from *Búxus*, to which genus the narrow-leaved variety bears a great resemblance

History, Use, Propagation, Culture

2844. *Pterocàrya* 18054 *caucásica*. This tree is "sufficiently hardy to be classed among ornamental trees of the third rank. It is readily propagated by layers. For small gardens and diminutive arboretums this tree may serve very well to exemplify the Juglandàceæ. Care should be taken to train it to a single stem, and not to plant it in soil so rich and moist as to prevent it from ripening its wood Perhaps something might be gained, in point of hardiness by grafting it upon the common walnut." (*Arb. Brit.*, vol iii p. 1452.)

18039 Very smooth, Lvs ov.-rotund obt at base rarely little cord. uneq. apicul. Marg minutely serrat subciliat. Largest wing of cap trian projecting

History Use, Propagation, Culture,

2845. Picea "Some confusion exists in the works of modern authors respecting the silver fir and the spruce, partly, as it would appear, from the circumstance of Linnæus having made an erroneous application of the names given to these trees by Pliny The tree which Theophrastus calls Elate, Pliny calls Abies, and Linnæus Pinus Picea, while the tree that Pliny calls Picea, and which is our spruce fir, is named by Linnæus Pinus A'bies The silver fir was esteemed by the Romans for its use in carpentry, and for the construction of vessels . . . The wood of the silver fir is elastic, and the colour is whitish The grain is irregular, as the fibres which compose it are partly white and tender, and partly yellow or fawn-coloured, and hard The narrower the white lines are, the more beautiful and solid is the grain of the wood In the Vosges, it is said that the external layers are more compact than the internal ones, which may arise from the practice of barking the trees there before they are cut down The weight of this wood varies exceedingly, according to the age of the tree, the place where it grew, and even the part of the trunk from which it was taken According to Hartig, the wood of a tree 80 years old weighs 66 lbs 14 oz per cubic foot green, and 41 lbs. 5 oz when dry , while that of a tree 40 years old weighs only 37 lbs 9 oz. when dry. It shrinks considerably in drying, like all white woods It is used for planks, and carpentry of all kinds, for the masts of small vessels, for joists and rafters, and for building the boats for navigating rivers It is said to endure a long time when used as piles, and to be much employed in Holland for that purpose In the Vosges it is used in every department of agriculture, carpentry, joinery and even cabinet-making and sculpture In England, the wood of the silver fir has been chiefly used for flooring , and, according to Arthur Young, and also to Mitchell, boards sawn out of full-grown trees

18071 Lvs in fives very slender, Sheaths deciduous, Cones ovate stalked, Scales depressed truncate brown scarious white and torn on the margin

13523 Lvs in fives, Sheaths deciduous, Cones ov erect ab. length of lvs. Scales with young pubes. Wings of seed obliterated, Crest of anth kidney-sh

13522 Lvs slender without sheaths, Male cats small, Cones cylindrical long and pendulous, Cotyledons 6 to 10 [smooth pendulous long than lvs.

13516 Lvs in fives very long and slender loose, Crest of anthers roundish truncate simple lacerated, Cones cylindric.

18072 Lvs in fives rigid roughish, Sheaths very short, Cones thick very (14 in to 16 in) long cylindric, Scales loose roundish

18073 Lvs in fives short smoothish obtuse, Cones cylindrical and smooth about 7 in long, Scales loose and pointed

18074 Leaves in twos and threes, Cones much longer than the leaves, Sheaths short black

I *Leaves tetragonal, awl-shaped, scattered in insertion.*

13530 Lvs scattered quadrangular, Cones cylindric 5 in to 7 in long and from 1½ in to 2 in. broad termin pendent, Scales naked truncate at summit flat

7 Clanbrasiliana stricta 9 tenuifolia 11 monstrosa, syn. *A monstrosa Sm of Ayt*

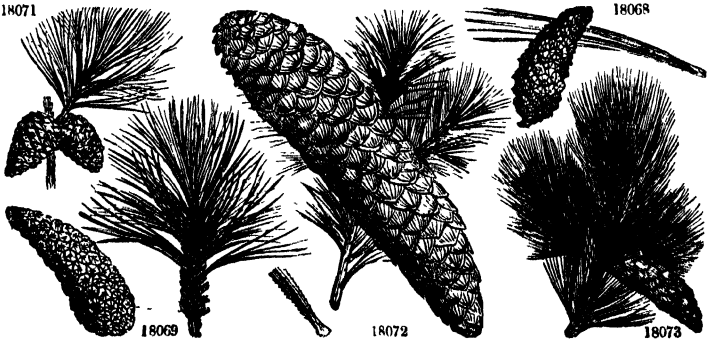
13533 Lvs solit regularly disposed all round the branches erect very short somewh. quadrang Cones ov pendul Scales somewh undulat crenulat or divided at apex

13532 Lvs solit awl-sh acuminate, Cones obl blunt, Scales round somewhat 2-lobed entire [on margin

18075 Lvs compress 4-gonal straight awl-sh sharp-pointed, Cones ov-obl Scales obov-roundish coriac rigid smooth

13528 Leaves solitary tetragonal, Cones ovate-cylindrical, Scales rhomboid

II *Leaves flat, generally glaucous beneath, imperfectly 2-rowed.*



18076 Lvs flat blunt entire pectinate silvery ben Cones ovate-obl Bracteas elongated linear 3-pointed, Cones about 4 in long

18077 Lvs acute flat silvery ben turned in every direction, Cones cylindric, Scales scarious gnawed on the margin

13527 Lvs solit flat slightly denticulate obtuse 2-ranked, Cones oval termin pendent naked scarcely longer than the leaves

18078 Lvs subulate flat dark green above silvery ben terminat in sharp spine, Petioles very short dilated lengthwise at point of attachment to branches.

†13525 Lvs solit flat obtuse 2-ranked points turned up, Cones axill. cylindric erect, Scales with long dorsal bracteas Anth with short crest with 2 teeth

and Miscellaneous Particulars

may be laid down at once, without any risk of their shrinking As fuel, the wood of the silver fir is to that of the beech as 1079 is to 1540, and that of the spruce as 1079 is to 1211. The charcoal is to that of the beech as 1127 is to 1600. Though the charcoal is much inferior to that of the beech, yet it is preferred for heating iron that is to be forged, as producing the heat more slowly, in consequence of which the iron is more pliant to work The bark may be employed for tanning leather, and is used generally in some parts of Switzerland. A resinous sap flows from the trunk and branches, called *larmes de sapin* This sap is bitter, acrid, and viscous, and its smell approaches to that of the citron, it is healing, balsamic and antiseptic The resinous fluid is found in small tumours or blisters, under the epidermis of the bark, and in the green cones, from the latter of which it is collected about midsummer From the resin of this tree are manufactured Strasburg turpentine (so called from a large forest of silver firs, the Hockwald, near Strasburg), colophony, and white pitch The quantity of potash furnished by the bark and wood is in proportion of 2 lbs of potash to 1000 lbs of wood and bark, which places the silver fir in the rank of 21 in a series of 73 ligneous plants. In some parts of Europe, the young cones, reduced by boiling to a pulp, and preserved with sugar, are eaten as a sweetmeat This conserve is put into tea, to which it is said to communicate an agreeable odour The leaves serve for litter; and, in Switzerland, according to Kasthoffer, are given to sheep and goats: but they are said to give the milk a peculiar taste "

" The silver fir, like all the other Abiétinæ, will attain a large size on soils of a very opposite description; but a loam, rather rich and deep than otherwise, appears to suit it best." (*Arb. Brit.*, vol iv.)

History, Use, Propagation, Culture.

2846. *Gárrya* 18088 *elliptica* is an evergreen hardy shrub, with thick coriaceous leaves, like some species of evergreen viburnum. "This is probably the greatest botanical curiosity sent home by Douglas; for it appears to represent a natural order altogether distinct from any previously known, and connecting certain well-known natural orders in an unexpected and satisfactory manner. In its amentaceous inflorescence, imperfect flowers, superior calyx, and mode of germination, Gárrya is very similar to Cupuliferæ, from which it differs most essentially in its wood without concentric circles or dotted vessels, its opposite exstipulate leaves, simple fruit, and minute embryo lying in a great mass of albumen The latter characters bring it near *Piperàceæ* and their allies, especially Chlorànthæ, with which its woodless wood (for Chloránthus has no annual zones), simple fruit, and opposite leaves, also agree, but the stipules

of Chloranthæ, together with its achlamydeous bisexual flowers and articulated stems, distinctly separate that order." (*Bot Reg.*) "Only the male plant of G. elliptica is in the country. When in flower (which it is from December till April), the plant has a most striking graceful appearance, from its slender pendulous catkins, many of which are 8 in. to 1 ft in length. It was at first grown in peat, but appears to prefer a loamy soil. It is readily increased by layers and by cuttings in sand under a hand-glass" (*Arb. Brit*, iv. 2031.)

2847 *Rhodiola* 18088 *rosea* is a plant with the habit of Sedum *Telephium* It is found on wet rocks, on the mountains of the north of England and Ireland, and in the north-west of Scotland, abundant, likewise on cliffs by the sea-shore. It is the badge of the Highland clan *Gunn*.

assured that the negroes on the farm, who are in the habit of drinking large quantities of this vegetable milk, consider it as highly nutritive, an assertion which startled us the more, as almost all lactescent vegetable fluids are acrid, bitter, and more or less poisonous Experience, however, proved to us, during our residence at Barbula, that the virtues of the Cow Tree, or *Palo de Vaca*, have not been exaggerated. This fine tree bears the general aspect of the Star-apple Tree (Chrysophyllum *Cainito*), its oblong, pointed, coriaceous, and alternate leaves are about 10 in long, and marked with lateral nerves, that are parallel, and project beneath The flower we had no opportunity of seeing, the fruit is somewhat fleshy, and contains one or two kernels Incisions made in the trunk of the tree are followed by a profuse flow of gluey and thickish milk, destitute of acridity, and exhaling a very agreeable balsamic odour It was offered to us in calabashes; and, though we drank large quantities of it, both at night before going to bed, and again early in

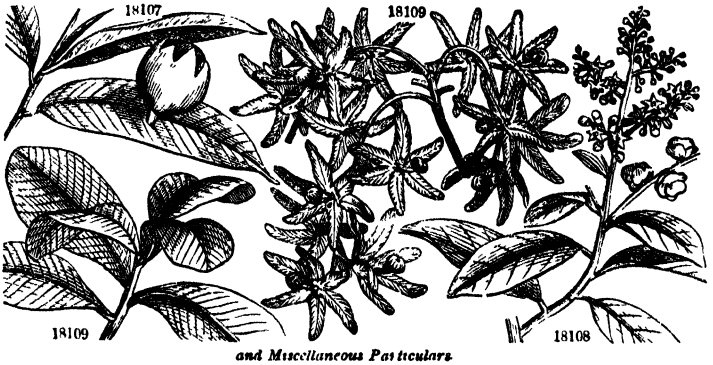
History, Use, Propagation, Culture,

the morning, we experienced no uncomfortable effects The viscidity of this milk alone renders it rather unpleasant to those who are unaccustomed to it. The negroes and free people, who work in the plantations, use it by soaking bread in it made from Maize, Manioc, Aropa, and Cassava Slaves become visibly fatter during the season when the *Palo de Vaca* yields most milk. When exposed to the air this fluid displays on its surface, probably by the absorption of the atmospheric oxygen, membranes of highly animal nature, yellowish and thready, like those of cheese, which, when separated from the more watery liquid, are nearly as elastic as those of caoutchouc, but in process of time exhibit the same tendency to putrefaction as gelatine The people give the name of cheese to the curd which thus separates when brought into contact with the air, and say that a space of 5 or 6 days suffices to turn it sour, as I found to be the case in some small quantities that I brought to New Valencia The milk itself, kept in a corked bottle, had deposited a small portion of coagulum, and, far from becoming fetid, continued to exhale a balsamic scent. When mingled with cold water, the fresh fluid is coagulated with difficulty; but contact with nitric acid produced the separation of the viscous membranes.

"This wonderful tree appears peculiar to the cordillera of the shore, especially from Barbula to the Lake of Maracaybo. Some individual Cow Trees are also said to exist near the village of San Mateo, and likewise in the Valley of Caucaguea, three days' journey to the east of Caraccas



"At Caucaguea, the natives call the tree which yields this nutritive fluid, Milk Tree (*Arbol de leche*)."

"The wood forming the body of the trunk is white, very close-grained, and hard, resembling the boxwood of Europe The soil which these trees inhabit is dark and rich, and must be damp or very wet all the year round" (*Bot Mag*)

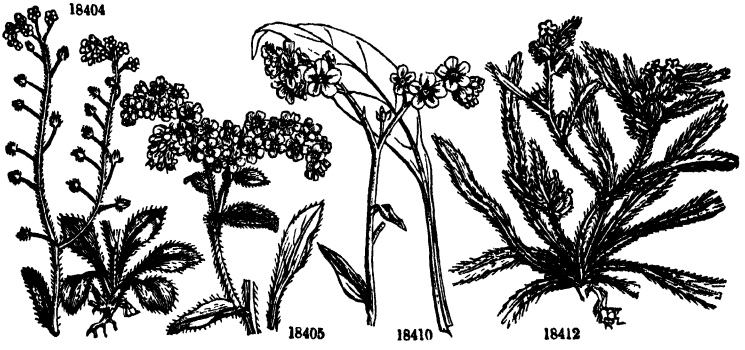
2851 *Semecárpus* 18108 *Anacárdium* is a lofty tree with spreading branches. Leaves about 18 in. long, and about 4 or 5 broad Flowers small, of a greenish yellow colour Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminæ, the inner hard, the outer less so and leathery, between them are cells which contain the black, corrosive, resinous juice, for which this nut has been long known, the juice is of a pale milk-colour till perfectly ripe, when it becomes black The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes; and eaten by the natives, their taste is very like that of roasted apples · unroasted, they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten The green fruit, well pounded into a pulp, makes good birdlime The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains in tender constitutions it often produces inflammation and swelling, but where it has not these effects it is an efficacious remedy It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint It is in general use for marking cotton cloths, the colour is improved and prevented from running by a little mixture of quicklime and water. This juice is not soluble in water, and is only

18108 Lvs. oblong bluntish glauc. ben. more or less covered on the nerves beneath with scabr. down, Panicle terminal tomentose

18109 Leaves obovate very blunt villous

and Miscellaneous Particulars

diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalised. The solution is then pretty complete, and of a deep black colour It sinks in expressed oils, but unites perfectly with them: alkaline lixivium acts upon it with no better success than plain water (*Don's Mill*, ii 63) Culture, &c, see Melanorrhœa below



2851 *Melanorrhœa* 18109 *usitàta*. This tree is a native of Hindostan, in a large valley called Kadbbu, in the kingdom of Munipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Thcet-tsee* or *Zit-si* This is identical with the majestic *Kheu* or varnish tree of Munipur, on the north-east frontier districts of Silhet and Tipperah Mr M R Smith, who has resided a long time in Silhet, considers this the same as the varnish tree of the Chinese, in the eastern and north-eastern provinces. It is procurable in great quantities from Munipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid The drug is conveyed to Silhet for sale by the merchants On being handled it occasions extensive erysipelatous swellings, attended with pain and fever, but never of long duration In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the poorness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours, after which they are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which last as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow In its pure state it is sold at Prome at the rate of 1 tical, or 2*s*. 6*d*, the viss, and at Martaban, 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of sesamum. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3¼ lb Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state, or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner, by the articles thus varnished being placed in subterraneous vaults for many months. The drug is also used as a size glue in the process of gilding, nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf If it is considered how very extensively that art is practised by the Burman nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone Finally, the beautiful Pali writing of the religious order of the Burmas, on ivory, palm leaves, or metal, is entirely done with this varnish in its native and pure state (*Don's Mill*, ii 67) A mixture of loam and peat will suit this tree, and ripened cuttings will root in sand, under a hand-glass, in heat.

2. *Maránta* Until the *M. ornàta* has flowered, the genus cannot be ascertained. In the meanwhile, the foliage of these plants forms a most beautiful object among other vegetation; the green is of the rich deep hue of *Calàthea zebrina*, while the stems and under side of leaves have the same rich stain of purple; in addition, the leaves are brilliantly banded by well defined oblique streaks of a delicate pink in one variety, and of a yellowish white in the other. They require a well-worked, rich, mixed soil frequent watering while growing, and a shady place in a

CLASS I. — MONANDRIA.

MONOGYNIA.

Essential Specific Character

18110 Leaves ovate-oblong acuminated glabrous coloured on the margins, Ovarium subglobose papillose, Segments of Calyx obtuse, Lip revolute obtuse emarginate

18111 Leaves rich deep green, striped in one variety with white and in another with pink

18112 Leaves glaucous beneath pilose, Scape elongated, Bracts cuspidate villous, Petals obovate 2-lobed

18113 Caulescent or Scape radical leafless, Leaves oblong acuminate purple beneath, Raceme compound, Bracts ovate lanceolate complicate scarlet

18114 Spike imbricated concave below and convex above hairy, Leaves lanceolate unequal-sided, Petioles and Spikes bristly, Outer Bract cordate with an elongated setose apex, Inner Bract winged

18115 Leaves oblong acuminated, Outer Spathes obtuse, Inner ones cylin , Mid seg of Cor. rounded unguic bifid

18116 Lvs broad ovate-oblong, Spathes cucullate as long as tube, Mid seg of Cor. broad 2-lobed unguic rest linear

18117 Leaves oblong taper-pointed, the point long twisted at top, Middle segment of Corolla broad entire unguiculate, the rest lanceolate

18118 Raceme spike-formed strict, Flowers scattered, Calyx obliquely truncate bluntly tridentate, Capsule baccate roundish

18119 Ligula very short and rounded, Bracts roundish cordate, Spikes obovate 6 inches above ground and 4 inches below, Leaves narrow

18120 Leaves lanceolate nearly sessile, Spike terminal secund, Tube of Corolla enclosed

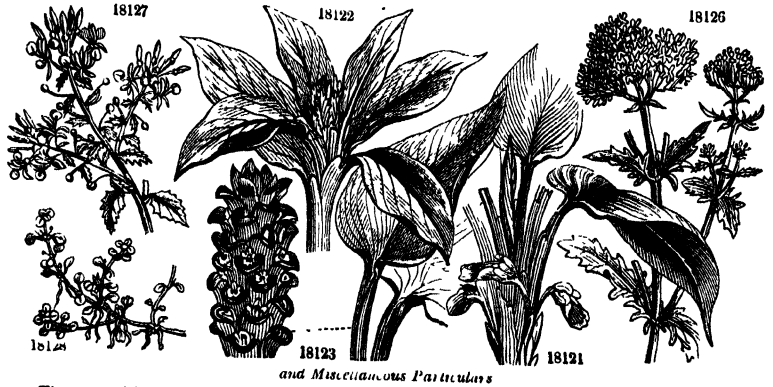
18121 Leaves oblong-cordate on long petioles, Spikes radical, Tube of Corolla very long exserted

18122 Caulescent glabrous, Leaves oval, Spike oblong sessile rather loose, Lip oblong obtuse toothed, Appendage of anthers petaloid tripartite, Segments undulated torn

[at top of spike violaceous

18123 Tubers numer. glob , Lvs ovate-cord acumin clothed with silky hairs, Spikes centr , Bracts ovate obtuse, Tuft

18124 Spikes terminal, Leaves on long stalks broad-ovate, Bracts scarlet



18125 Tubers almost wanting, Leaves oblong ovate on long stalks, Spike central pedunculate imbricated in four rows, Coma white, Lip obovate, Anthers mutic at the base

18126 Stem fistular glaucous, Leaves ovate entire or toothed, upper ones sessile more or less deeply cut at base, Panicle corymbose, Tube of Corolla very long

18127 Stem and petioles hairy, Lvs ovate crenately serrul. downy lined above, Gland solitary on the base of up. ptls

DIGYNIA.

18128 Fruit nearly sessile, Lobes parallel in pairs slightly winged at the back, Styles erect in the flower reflexed closely over the fruit, Bracts falcate

and Miscellaneous Particulars

stove in 1849 These exquisite plants were exhibited before the Horticultural Society at one of their meetings at Chiswick

2852 *Gastrochilus.* The blossoms are very handsome and graceful, and at first sight give the plants the appearance of *Orchideæ*. The genus is nearly allied to *Kæmpferia*. They thrive well with the same treatment as terrestrial tropical *Orchideæ*.

History, Use, Propagation, Culture.

2853 *Forsýthia.* This forms a compact deep green bush, with opposite oblong leaves, which emit a slight balsamic odour. It sheds its leaves in autumn and remains dormant like any other deciduous shrub, but is remarkable for the number of large prominent buds scattered along the young stems produced the preceding summer. Early in

parallel. Sterile filaments subulate, or wanting Stigma bidentate. Capsule depressed from the base to the middle, 2-celled, 2—4-seeded. Seeds discoid, furnished with retinacula.

2859 65*a*. *Rhynchoglóssum*. Calyx tubular, 5-cleft. Corolla tubular, personate. Stamens 5, the two lower bearing reniform anthers, the three upper ones small and sterile. Stigma capitate. Capsule enclosed, ovate, 2-valved. Seeds small.

2860. 65*b* *Pterostigma*. Calyx 5-parted or 5-toothed. Corolla bilabiate; upper lip emarginate; lower one divided into 3 lobes Anthers 2-lobed Style simple. Stigma undivided Sterile filaments subulate.

2861 65*c*. *Læbigia* Calyx tubular, 4—5 cleft. Corolla funnel-shaped, widened upwards; limb unequal, 5 lobed, subbilabiate Stamens 4, 2 only bearing anthers. Anthers 2-celled, cohering Stigma bilamellate. Capsule siliqueformed, falsely 4 celled, 2-valved. Seeds pendulous, expanded into a wing at the base

2862 67*a* *Chondrospérmum*. Calyx urceolate, 4-toothed Corolla funnel-shaped, 4-parted, rather fleshy; segments linear, clavate Stamens inserted above the base of the tube, enclosed. Ovarium 2-celled; cells 1-seeded. Stigmas 2, sessile, acute.

2863 75*a*. *Labichea*. Calyx 5-cleft, regular. Petals 5, roundish. Stamens 2. Style subulate. Stigma simple. Ovarium biovulate, on a short stipe.

MONOGYNIA.

18129 Leaves oblong-ovate acuminated glabrous, Racemes compound, Peduncles and pedicels spreading
18130 Leaves ovate acuminate rather coriaceous hairy beneath, Thyrse hairy tomentose as well as young branches

18131 Branches warted, Lvs broad-obl. tapering to both ends glabrous whitish beneath, Segms of Cor hooked at tip

18132 Bran tetragonal, Lvs obl.-lanceol. serrated at top, Flws rising before the lvs twin on short pedicels drooping Sepals roundish

18133 Erect, Lvs ternate Leaflets lanceolate, Corymbs terminal [Corolla 5-parted bluntish
18134 Glabrous, Lvs opposite ternate, Lflts ovate-lanceol. taper-pointed, Panic cyme-formed, Cal acutely 5-toothed,
18135 Lvs op pin 2-3 pairs term largest, Flws 3 term on long ped, Cal seg subul, Lobes of Cor obl. obt or ac
18136 Bran angular, Lvs trifol., Lflts ovate-acum glabr, Flws sol scaly at base, Cor 6-lobed obtuse, Cal. seg. lanc
18137 Lvs small ovate-acuminate glabrous, Peduncles terminal many-flwd, Calyx segments setaceous
18138 Glabrous, Lvs ov-lan acum, Ped trichot axillary term corym, Cal teeth 6 subul, Cor seg 6-7 lan. lin. acute
18139 Lvs altern ternate glabrous, Lflts oval-acute, Flws panicled, Sepals subulate, Cor. 5-parted, Segments ovate
18140 Lvs ternate nearly opposite downy, Lflts linear acute, Branches terete, Panicles axillary trichotomous [nearly globose glabrous
18141 Lvs cordate-oblong obtuse deeply toothed somewhat pinnatifid at base naked, Racemes elong terminal, Capsule
18142 Bran. with two rows of hairs, Lvs ob-lanceol acute quite entire glabr., Racemes few-flwd subcorymb Segm. [of Cor lanceol acute
18143 Glabr, Lvs on short petioles fleshy obovate entire retuse and mucro. at top, Peduncles axil. solitary race-
18144 Rac lateral erect, Lvs pinnatifid glabr, Cor bearded at the base [mose, Flws dense, Cor. subrotate
18145 Racemes lateral nutant, Lvs lanceol. sessile quite entire or serrated one-nerved

18146 A beautiful hybrid between *V. speciósa* and *V salicifólia*
18147 Procumbent hairy, Lvs cordate-ovate serrated, Cal. seg ovate acute, Capsule obcor. lobes turgid not keeled

18148 Glabrous, Lvs scattered nearly linear acute sharply serrulated, Raceme terminal dense

18149 Lvs pinnatif with entire linear segs, Lower lip of Cor 3 lobed, lateral segs setaceous middle segm 2-lobed acute
18150 Lvs pinnatif with rounded entire segms, Lower lip of Cor 3-lobed middle lobe cucul 2-lobed lateral lobes [falcate spatulate obtuse
18151 Glabrous, Lvs sessile obov-obl rather fiddle-shaped, Racemes terminal erect elong. many-flwd
18152 Erect downy Bran simp decus, Lvs lanc obscurely cren, Spikes term elon, Bracts op by fours, remote, 1-fl
18153 Slndr dwny, Rac term lo se, Ped axil. few-fl, Lvs ov. ent or slightly toothd blthd with white, Cal. lob subul.
18154 Branches villous, Leaves obovate acuminated undulated hairy, Spikes short axillary and term, Calyx hairy

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2855 *Porphyrócoma* is a beautiful plant, with dense heads or spikes of purple bracts, and purplish-blue flowers Culture and propagation are the same as those recommended for *Justicia*, p 18.

2856 *Phlogacánthus* Pretty shrubs cultivated in the same manner as *Justicia*, p. 18.

2857. *Cyrtanthèra.* The species are all splendid plants, when well grown. They succeed best in a warm part of a stove. A mixture of good loam, leaf mould, and turfy peat is the best soil for them. In order to insure large heads of flowers, the plants should be shifted into larger pots when necessary. They are readily propagated from cuttings.

18155 Leaves lanceol. nearly sessile entire, Spikes terminal and subterminal aggregate, Bracts large 1-flowered

18156 Stems quadrangular downy, Leaves large elliptic acute at both ends toothed glabrous, Corolla elongated

18157 Leaves oblong attenuated at both ends subcrenulated, Racemes terminal, Flowers fascicled

18158 Leaves on longish petioles broad cordate acuminate entire, Thyrse large compact, Bracts and sepals lin subul
18159 Leaves broad elliptic-lanceol. tapering into the thick short petioles, Thyrse compact, Bracteoles and sepals lanc
18160 Leaves on longish petioles ovate-acuminate, Bracts and sepals ovate-lanceolate, Thyrse compact

18161 Glabrous, Lvs obl. acuminated, Racemes terminal elong. simple, Ped short 1-flwd fascicled, Cor nearly regular

18162 Downy, Lvs obl -lanc. rug , Thyrse interrupted naked many-flwd, Cor inflated funnel-shpd with glandular limb
18163 Glabrous, Lvs lanceol acum sessile, Pan terminal short thyrsoid bracteate, Cor elongated nearly regular
18164 Glabr., Lvs nearly sess. obl lanc. erosely denticulated, Rac axil many-flwd nodding, Cor. tubularly ventricose

18165 Plant pale yellow, stemless, with slender graceful one-sided drooping spikes

[than the leafy calyx

18166 Stem hairy flexuous, Lvs cordate-ovate wrinkled crenate whitish beneath, Pan. terminal, Cor. hardly longer
18167 Clam vil , Pet. wing dent petiol , Lvs ov cord at base doubly set canes beneath, Pan. lar , Lower lip lar ob
18168 Branches glabr., Lvs approximate cuneiform ovate deeply ser hoary and tomentose beneath, Corymbs terminal
18169 Branches clammy, Lvs lanceolate acuminate denticulated glabrous, Corymbs terminal, Pedicels clammy
18170 Viscid, Lvs linear remotely serrated, Panicles terminal leafy, Ped opposite corymbose, Lower lip large inflated
18171 Pilose, Lvs ovate-lanceolate crenately serrated, Panicle corymbose, Lower lip large obovate-orbicular
18172 Lvs oblong obtuse entire clammy, Corymbs terminal, Outline of Corolla square

18173 Leaves of two forms, outside ones small imbricate, inner or upper ones fewer obovate spatulate obtuse concave, Spur curved, Ovarium villous

18174 Downy, Leaves ovate-acuminate coarsely serrated, Spike elongated dense, Bracts orbicular awned, Tube of Corolla curved

[white hairs, the nerves purple, Whorls larg

18175 Stem quadrangular, internodes long, Leaves lanceolate subcordate subamplexicaul serrated fringed with
18176 Stem fist. tetrag., Lvs ov -lanc cord at base wavy ser bullate downy, Floral lvs smaller redish-vi Cor twist.
18177 Stem tetragonal, Leaves lanceolate acuminate serrated oblique at base, Floral leaves long acuminate white in the middle, Whorls globose approximate

18178 Leaves roundish-cordate sinuately crenated wrinkled above downy beneath, Whorls terminal few-flowered
18179 Hab of *S fulg* , but the upper lip of cor is flatter, the tube longer, the flws far more abundant and conspicuous
18180 Stem sim. pil , Lvs ov -obl obt cren nly glabr , Whorls abt 4-flwd lower remote, Cal hairy, Up. lip triden.
18181 Stem villous, Lvs obl. toment., Scapes naked glabrous, Pan elong. bran viscid, Cal 5-toothed, Cor glandular
18182 Erect villous, Leaves stalked cordate-sagittate, Floral ones ovate, Rac branched, Whorls 6-flwd, Calyx clammy
18183 Procumb at base, Bran erect downy, Leaves ov -ob , Whorls 2-flwd one-sided, Cor downy, Lips nearly equal
18184 Stm pil , Lvs ov -deltd hastate cren , upper lvs lanc lin , Whrls few remote, Stam much exserted, Cor large
18185 Leaves ovate serrate-crenate rounded at base downy beneath, Whorls 6-flowered one-sided, Style bearded

18186 Branches smooth, Leaves coriaceous linear-lanceolate entire glaucous, Flowers 2½ inches long

18187 Lower lip of Corolla trifid twice as long as the tube, Racemes terminal one-sided simple, Pedicels solitary 4-bracted, Leaves unequal-sided

18188 Leaves opposite wrinkled ovate, Flowers racemose large tubular

18189 Scabrous, Leaves opposite unequal ovate elliptic serrated, Peduncles axillary aggregate bifid or dichotomous, Flowers diandrous

and Miscellaneous Particulars.

2858. *Thyrsacánthus* These are splendid stove plants, and should be treated in the manner recommended for *Cyrtanthèra*

2859 *Rhynchoglóssum zeylánicum* is a curious plant of easy culture It requires heat and moisture. Being an annual, the seeds may be raised in a frame

2860 *Pterostegma.* A pretty greenhouse plant, with large purple flowers. It should not be too much exposed to the sunshine It is propagated by cuttings

2861. *Læbigia* is a lovely plant, and requires the same treatment as others of the order *Cyrtandràceæ*

History, Use, Propagation, Culture,

2862. *Chondrospérmum.* This is a rambling evergreen shrub, with ash-coloured separating bark, and large coriaceous 3-nerved leaves, and terminal panicles of small greenish-yellow flowers. The erect position of the ovula seems to indicate its belonging to *Jasmineæ*, but the æstivation of the corolla is valvate. It does very well if trained to a trellis, or for covering a pillar in a stove. It is readily increased by cuttings in the ordinary way.

18190 Scandent, Branches tetragonal, Leaves opposite petiolate oval acuminated 3-nerved glaucous, Panicles terminal and axillary

18191 Leaves sinuated spiny-toothed, Floral leaves Corollas and Rachi villous, Lobes of Calyx cuneate oblong emarginate

[lanceolate linear, Lower part of Tube hispid upper part silky

18192 Involucrum 4-lvd, Lvs ovate glabrous ciliated equal in height to the crowded heads of flowers, Lvs opposite
18193 Lvs linear-obl. glaucous glabrous, Heads round many-flwd, Calyx vill., Lvs of Involuc. ovate-acum. coloured
18194 Involucrum 4-leaved, Leaves oblong decussate glabrous, Tube of Perianth hairy
18195 Lvs lanc. downy beneath, Flws dicecious, Male heads peduncled naked rather pilose, Lvs spatulate linear
18196 Invol. 4-lvd, Lvs ov glabr. about eq. in length to the head, Peri artic above [length of flws, Hds dense
18197 Lvs lin. glabr. above cithd. with white villi beneath as well as stem, upper ones narrower. subverticil imbr.
18198 Lvs alter. rarely opp. lin. spat pilose, Hds terminal many-flwd, Style and Stam. equal in length to the perianth
18199 Lvs oval or oblong obtuse glabrous, Invol 4-lvd, Flowers villous in heads, Segments of Corolla oblong obtuse
18200 Invol. 4-leaved, Leaves broad ovate glabrous, Tube of Perianth hispid, leaves decussate oval coriaceous
18201 Invol. 4-lvd, Lvs roundish obl. shorter than the flws, Perianth villous, lvs obl. glabr tapering to both ends
18202 Glabr. glauc., Lvs opp. subsecund broad lanc., Lvs of Invol. 4-5, Heads many-flwd, segms. of Limb ciliated
18203 Invol 4-lvd, Lvs ov. silky inside half shorter than hds, Tube of Peri silky, lvs lin. longer than internodes
18204 Lvs decus ov. obl. or lanc., tapering to ends hoary powdery, Floral lvs shorter than hds, Flws. very numerous

[branches, Racemes axillary few-flowered, Calyx and Corolla tetramerous

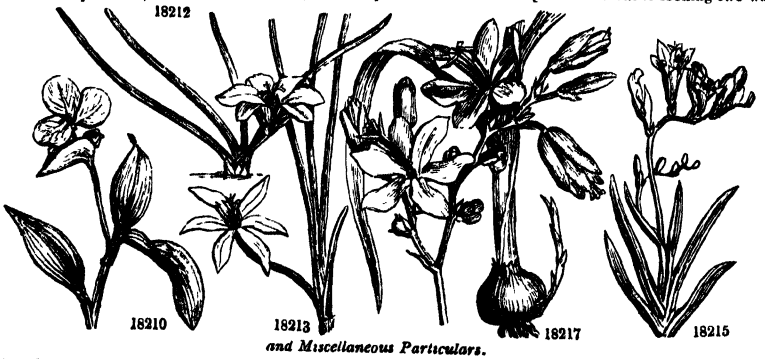
18205 Leaves pinnate, Leaflets lanceolate spiny-mucronate marginate smooth above downy beneath as well as the
18206 Leaves simple narrow oblong some having 2 stiff sharp points others with only one, Racemes short axillary
18207 Lvs simple obl. elliptic mucron. dotted downy beneath, Racemes short axil., Anthers obtuse and b porose

---

2865. 156*a*. *Apèra*. Spikelets laterally compressed 1-flowered with a superior rudiment Glumes 2, the upper larger, 3-nerved, about as long as the outer palea. Paleæ unequal, scarious, outer ones dorsally awned. Stigmas nearly sessile. Seed free

---

MONOGYNIA.



18208 Scandent glabrous, Stem terete, Lvs cordate-triangular acuminated toothed at base, Flws panicled minute
18209 Root large tuberous, Leaves pinnate, Segments linear acute toothed or entire, Flowers capitate or corymbosely panicled, Stamens exserted, Fruit downy

18210 Lvs ovate petiolate glabrous, Involucrum cordate ciliated, Stems creeping, Sheaths ciliated
18211 Lvs petiolate ovate-elliptic downy, Sheaths pilose ciliated, Cilia long brown, Spathes on short peduncles cucullate turbinate, Peduncles twin in the spathes one bearing two hermaphrodite flowers and the other one male flower

18212 Leaves linear sulcate much longer than the scape, Segments of Perianth ovate blue with white bases
18213 Lvs linear sulcate much longer than scapes, Segments of Perianth oval white with yel. bases purplish outside
18214 Corms edible, Leaves slender 8 inches long, Stems 4 inches, Bracts of involucrum equal

18215 Scapes much longer than leaves, Leaves ensiform, Flowers secund [recurved with eq lin segments
18216 Stem simple, Spikes secund, Flws erect, Perianth clav arched bilab., Upper Lip oblong tridental lower 5-parted
18217 Stem branched, Spikes panicled flexuous many-flowered, Segments of Perianth oval, Stamens white length of perianth

18218 Corm middle-sized, Leaves erect glabrous ½ inch broad, Stem about 10-flowered, Bracts 3 inches
18219 Corm large, Lvs broad rather glauc., Stem strong erect many-flwd, Bran 2-3-flwd, Limb of Perianth undul.,
18220 Stem early 10-flwd, Flws crowded secund, Bracts eq to tube [Flws bifarious or looking two ways

and Miscellaneous Particulars.

2863. *Labichea*. The species of this genus are beautiful shrubs when in blossom. A mixture of peat, loam, and sand suits them, and cuttings will root under a hand-glass. It is rather a remarkable Leguminous genus with diandrous flowers.

History, Use, Propagation, Culture,

2864 *Sonerìla* This is a pretty annual having little of the habit of a Melastomaceous plant, it is more like a *Tremándra* It grows best in peat earth or vegetable mould, with plenty of heat and moisture, not too much exposed to the sun's rays It ripens seed, by which it is propagated.

18239 *Páspalum exile* is a Lilliputian grain which is described by Mr Clarke as being about the size of Mignonette seed, and is stated to be cultivated about some of the villages of Sierra Leone by industrious individuals of the Soosoo, Foulah, Bassa, and Joloff nations, by whom it is called "Hungry Rice." The ground is cleared for its reception by burning down the copse-wood, and hoeing between the roots and stumps. It is sown in the months of May and June, the ground being slightly opened, and again lightly drawn together over the seed with a hoe. In August, when it shoots up, it is carefully weeded, it ripens in September, growing to the height of 1½ foot; and its stems, which are very slender, are then bent to the earth by the mere weight of the grain They are reaped with hooked knives Manure is said to be unnecessary or injurious, the plant delighting in light soils and being raised even on rocky situations When cut down it is tied up in small sheaves and placed in a dry situation within the hut; for, if allowed to remain on the ground or to become wet, the grains become agglutinated to their coverings The grain is trodden out with the feet, and is then parched or dried in the sun, to allow of the more easy removal of the chaff in the process of pounding, which is performed in wooden mortars It is afterwards winnowed with a kind of cane fanner on mats In preparing this delicious grain for food, Mr Clarke states that it is first thrown into boiling water in which it is assiduously stirred for a few minutes. The water is then poured off, and the natives add to it palm oil, butter, or milk; but the Europeans and negroes connected with the colony stew it with fowl, fish, or mutton, adding a small

18221 Corm mid. size, Stem 2 feet slender upds. Fl. about 9 secund bracteate Margin of limb of Per. plic, Caps
18222 Corm large, Stem strong, Flowers above 12 bracteate secund, Capsule wrinkled [turbinate trisulcate
18223 Corm large, Stem strong branched, Flowers bracteate looking one way, Bracts ovate striated, Upper 3 segments of Perianth broad oblong obtuse, lower 3 narrow emarginate

18224 Leaves broad quite entire acute shorter than the many-flowered contracted panicle, Rachis deeply furrowed downy, Branches all simple, Flowers secund white glabrous

18225 Limb of Perianth longer than the subventricose tube, Leaves fleshy channeled
18226 Segments of Perianth oblong-linear, Scales ligulate, Flowers umbellate, Scape slender, Leaves linear channeled, Bulb small

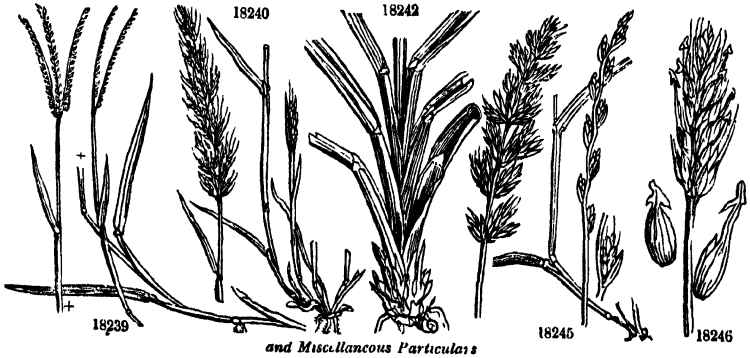
18227 Leaves long linear smooth smelling like garlic when bruised, Peduncles unequal

18228 Beardless, Lvs ensif., Segments of Cor. nearly eq., Tube very long beardless [short trunc cuspid.
18229 Beardless, Lvs ensif shorter than terete-branched stem, Spathes with scar. marg., Outer segs rndsh inner very
18230 Brdless, Lvs longer than scape lin. ac., Out segments of Per rndsh-spat., on lg clws inner shorter than clws of
18231 Bearded, Lvs stiff brd shrtr than scape, Brcts distich foliac imb., Pet obov emarg [outer tru c., Seta term.
18232 Brdl., Lvs nar. ens glauces lngth of my-flwd stem, Ovar fusif linger than brcts, Sep rhom. ent., Pet spat ent
18233 Beardless Leaves ensiform about equal to the many-flowered scaly scape, Scales leafy imbricate, Sepals ovate undulated, Petals lanceolate undulated acute

18234 Spathe leafy, Valves of spathe elongated, Peduncles slender, Flowers middle-sized.
18235 Leaves broad ensiform distich, Scape winged, Outer 3 segments of Perianth larger obovate deflexed white marked with brown transverse veins at base

[back, Spathe many-flwd, Filaments monadelphous, Ovaries glandularly pilose
18236 Scape compressed much shorter than the lvs, Lvs conduplicate linear sheathing striated scabrous on the edges and
18237 Stem simple sulcate l-lvd, Lf hollow, Spathe very long Flws numerous stipitate, Peduncle very long, Filam. connate, Ovaries hairy [beneath, Spikes terminal few-flwd, Rachis and Ovaries beset by glandular hairs
18238 Stem erect tetragonal, Lvs opposite, upper ones 4 in a whorl linear-lanceol. downy 1-nerved serrated purple

DIGYNIA.



18239 Glabrous filiform, Racemes in threes digitate, Spicules small in two rows pedicellate, Glumes ovate acute equal to the paleæ, Leaves linear with serrulated edges

18240 Panicle elongated close, Anthers oval
18241 Panicle whorled spreading, Beard long

18242 Panicle coarctate imbricated on all sides by spikelets

18243 Panicle erect rather spreading, Spikelets ovate of 3 or 4 ribbed florets, Outer Paleæ with 5 nerves
18244 Panicle erect large rather close, Spikelets ovate of 2 or 3 acute florets, Outer Paleæ with 5 nerves

18245 Spikelets longer than the glume, Flowers elliptic, Roots annual destitute of sterile shoots

and Miscellaneous Particulars

piece of salt pork for the sake of flavour, and the dish thus prepared is stated to resemble kous-kous. The grain is also made into pudding with the usual condiments, and eaten either hot or cold with milk The Scotch residents sometimes dress it as milk porridge Mr Clarke is of opinion that if the Fundi or Fundungi grain were raised for exportation to Europe it might prove a valuable addition to the list of light farinaceous articles of food in use among the delicate and convalescent The plant much resembles *Digitaria*, and is called Fundi, Fundungi, or Hungry Rice

2865 *Apèra* is a genus of rather pretty grasses Being annual the seeds only require to be sown in the open ground

18242 *Dactylis cæspitosa* is the famous Tussock grass of the Falkland Islands. It is also abundant in Terra del Fuego, Straits of Magellan, Cape Horn, &c. Commerson discovered it first in the Straits of Magellan in 1767 It will thrive in pure sand near the sea, where it has the benefit of an atmosphere loaded with moisture, of soil enriched by decaying seaweed, and of manure which is in the Falkland Islands composed of guano. It is a gregarious grass, extending in patches sometimes for nearly a mile, but is seldom seen beyond the influence of the sea air in the places of its natural growth It will, however, thrive far from the sea. When cultivated, Governor Moody of the Falkland Islands says, he knows of no grass likely to yield so great an amount of nourishment as the Tussock grass when thoroughly established. He recommends it not to be grazed, but cut and reaped in bundles, for if cut it quickly shoots again, but it is much injured by grazing, for all animals, especially pigs, tear it up to get at the sweet nutty flavoured roots. The Tussock has been used abundantly when made into hay, being preferred by cattle even to its green state. Plants of the Tussock grass six feet high were exhibited in the Crystal Palace in 1851, by Peter Lawson and Sons, raised from seed by them in the Orkney Islands.

History, Use, Propagation, Culture

18246 *Hórdeum cæléste* var. *trifurcàtum*, the Nepal Barley. The paleæ are occasionally different 3-lobed, the lateral lobes descending, the awns often present the rudiment of a second flower Mr Janson, F L S, grew the plant at Stoke Newington in 1837 and following years. It ripened earlier than our common grains, and produced, from the ripened seeds of the first crop, a second crop which also ripened within the same summer. Mr. Janson was the first who made the discovery that the plant belonged to *Hórdeum* instead of *Triticum*, to which till then it was always supposed to belong. The *Hórdeum cæléste* is the naked or wheat barley.

18246 Florets hermaphrodite, Seeds decorticate
Spike straight cylind , Outer Palea trifurcate white and petaloid during florescence, sometimes the 2 lateral points are short and incomplete

2868 252*a*. *Anthúrium* Spathe short, deflexed. Spadix nearly sessile, cylindrical, densely beset with flowers Sepals 4. Stamens 4, opposite the sepals Filaments flattened. Anthers 2-celled. Berry 2-celled, 2—4-seeded. Stigma sessile, oblong.

2869 280*a* *Ophíthe* Corolla rotate, 4—5-parted, each segment furnished with 2 distinct or combined nectariferous naked pores, or glands, at base. Seeds angular, scabrous Stamens 4—5. Capsule 1-celled, 2-valved, margins of valves placentiferous.

2870 296*a* *Campylobóthrys*. Calyx 5-cleft, segments with 2—3 glands Corolla 4-parted, segments unequal. Stamens inserted in the throat of corolla, exserted. Ovary tetragonal, fleshy, 2-celled, with an epigynous, fleshy, lid-formed disk, many-seeded.

231. *Proteàceæ* In the Botanical Magazine there are some valuable remarks on the culture of *Proteàceæ*, by Mr John Smith, practised for many years at the Royal Botanic Gardens at Kew, which we here extract. "Within the last twenty or thirty years the cultivation of *Proteàceæ* has declined, the species have gradually disappeared from most of the private collections around London, and but few nurserymen now take an interest in them. This change may be partly owing to the supposed difficulties of preserving them , for, under certain circumstances, the plants suddenly die, even when in a vigorous state of health. In the Royal Botanic Gardens at Kew, *Proteàceæ* have maintained their

History, Use, Propagation, Culture,

place, more especially those that are natives of Australia; and as there are some at this time between forty and fifty years of age, and others of a large size half that age, it may be inferred that *Proteàceæ* are not so short-lived in a state of cultivation as they are generally supposed. Within our recollection it was the common practice to grow them in some kind of light soil, usually peat The hygrometrical condition of such soil is easily affected by changes of the surrounding atmosphere, becoming quickly dry during hot weather, and apt to become sodden with moisture in winter, and the spongioles or rootlets of *Proteàceæ* are very sensitive to either extremes, the use of light soil, therefore,

and Miscellaneous Particulars.

In our opinion, accounts for the frequent sudden death of plants of this kind. We use good yellow loam, to which, for small plants, we add a little sharp sand In shifting or repotting a plant we make it a rule to keep the ball of roots a little elevated above the surface of the new mould, to prevent any superabundance of water from lodging round the base of the stem. In the winter, care must be taken to give no more water than is absolutely required to keep the soil moderately moist; but, in summer, water may be freely given in the evening or morning It is important that the plants should be so placed that the sun's rays do not strike the sides of the pot. The *Proteaceæ* do not readily propa-

History, Use, Propagation, Culture,

gate from cuttings, but may be more readily increased by grafting on any of the more free-growing species. Imported seeds germinate freely" (*Bot Mag* for 1850, no 4528.)

Before the introduction and high state of cultivation of the splendid flowering plants now annually exhibited in the vicinity of London, it was customary to estimate the value of public and private collections by the number and rarity of the species, without regard to the circumstances of their producing fine flowers. Perhaps no tribe of plants were in higher repute than those belonging to *Proteàceæ*, as is amply shown by the early volumes of the Bot. Mag.

18334 Lvs lanc. remotely and spinosely tthd or pinnatif white from toment beneath, Involucre glabr with closely im-
18335 Lvs lin pinnatif clothed with white toment ben., Lobes lin, Scales of Involucre scar nearly glabr, Per. vill.
18336 Lvs lin pinnatif. toment ben, Lobes lin. subul. fak, Scales of Involucre lin subul downy, Lam of Per. smooth
18337 Lvs pinnat, Lobes semilanc, Stem erect humble, Lam of Perian. short awned loosely pencilled at top, Scales
18338 Lvs white ben lin quite ent below middle pinnatif above, Lobes distant lin, Scales of Involucre lin. subul. vill.
18339 Lvs long lin pinnatif trunc mucron, Lobes triang white ben, Involucre often appendiculated, Per. villous
18340 Lvs pinnatif, Lobes semiov lanc nerved, Stem short prostr shorter than lvs scaly below leafy at top
18341 Lvs longer than scaly stem bipinnatif beyond mid., Segs lin mucr with revol. edges, pil. above toment. ben.
18342 Bran. vill Lvs long lin semip white ben veiny, Lobes triang mucr with revol edges, Involucre toment.
18343 Lvs pinnatif nitid, adult glabr floral vill, Lobes triang flat pung. toment ben., Bran toment., Calyx glabr.
18344 Lvs long lin semipinnatif white ben, Veins naked, Lobes triang mucr with revol edges, Involucre downy
18345 Lvs cun obov sinuately toothed trunc white and toment. ben, Teeth triang pung., Bracts toment
18346 Lvs pinnatifid longer than the toment stem, Lobes lin acute mucron with revol marg. dil at base, Scales of Lobes manifestly 3-nerved, Stem humble simple, Florifcrous Bran prostrate [Involucre ov. toment

18347 Erect-bran, Lvs pinnatif, Lbs mucr pung veined ben., Lacunæ filled with curled wool terminal solitary

18348 Caulescent, Leaves radical on long petioles lanceolate-acute, Peduncles long, Spathe reflexed
18349 Almost steml, Lvs cun-lan acumi nar at base marg., Veins obsol, Petioles slender, Peduncles filif, Spadix slender few-flowered [cylindrical length of spathe
18350 Stemless, Leaves ovate acute costate, Petioles about the length of the leaves, Thickened at top, Spadix short
18351 Leaves oblong acuminated rounded at base on long petioles, Spathe ovate-oblong acuminate
18352 Stemless, Leaves on long petioles lanceolate-acute mucronate glaucescent above green beneath, Spadix on a long peduncle erect cylindrical, Spathe lanceolate-oblong acuminate, Spadix slender
18353 Nearly steml, Lvs pet. lin. lanc mucr. rounded at base glab., Pedunc. elong, Spathe lin-lan acum reflexed

18354 Lvs obl. pet. green above dotted beneath, Flowers rising from the short branchlets longer than the petioles

18355 Stem erect, Branches tetragonal downy at joints, Leaves linear-oblong radical ones tapering at base and ciliated, Stipules broad-ovate entire or bi-tridentate, Stamens enclosed

18356 Leaves 6-8 in whorl linear-lanceolate with reflexed marginal prickles, Stems rough from reflexed prickles, Peduncles axillary many-flowered cymose, Fruit bristly

18357 Covered with glandular dots and stellate down, Leaves lanceolate oblong membranous acuminated serrate, Cymes many-flowered, Stamens exserted

18358 Glabrous, Leaves verticillate oblong entire subcordate at base, Flowers terminal corymbose, Calyx 5-toothed, Corolla 5-lobed downy, Berry compressed blue [term. pedunc. globose
18359 Clothed with white tom, Branches tetragonal, Leaves lanc connate crenate acute scabrous green above, Heads
18360 Bran woolly, Lvs woolly ben lower cord obl upper ov-lanc nearly entire, Rac term. Panic. thyrsoid

and Miscellaneous Particulars.

2867. *Hemiclidia* This genus is nearly allied to *Dryándra* and is cultivated like other Australian Proteaceous plants

2868. *Anthùrrum* is separated from the old genus *Pòthos* by Schotte and Endlicher, and perhaps rightly so The American species of *Pòthos* mostly belong to this genus. The type of the genus *Pòthos*, according to these botanists, is the *Pòthos scándens* of Linnæus (Bot. reg. 1837). The species require the same treatment as that recommended for the stove species of *Pòthos* or *Arum*.

History, Use, Propagation, Culture,

2869. *Ophèlia.* The species are pretty plants with the habit of *Chirònia*. The seed should be sown in pots filled with peat soil The seeds should not be covered by earth, but pressed by the finger. Moisture is requisite, being naturally bog plants.

2870. *Campylobòthrys.* This is a very pretty plant, thrives well in a mixture of peat and leaf-mould, and is readily increased by cuttings in the same kind of soil under a hand glass.

18390. The leaves of *I'lex paraguénsis* (the Paraguay Tea) are used in Paraguay, La Plata, Chili, Peru, and Quito, at all hours of the day, by putting a handful in a kind of teapot called *mate*, and from the spout of this the hot liquor

18361 Glabrous, Branches tetragonal, Leaves ovate subserrate, Racemes terminal tomentose verticillately spicate
18362 Branches subtetragonal downy, Leaves ovate lanceolate petiolate glabrous above wrinkled covered with rusty or white tomentum beneath, Racemes terminal, Peduncles few-flowered [4 ovate acuminate
18363 Stem tetragonal, Lvs stem-clasping ovate-oblong acuminate 5-nerved, Calyx 4-parted 4-winged, Cor. segments
β Leaves nearly ovate, Segments of Corolla white purple at top.
18364 Stem tetragonal, Leaves sessile elliptic-oblong 3-nerved, Calyx 5-parted with semicordate oval wings, Segments of Corolla 5 obovate, Stamens exserted

[flowered, Corolla 4-parted
18365 Stem tetragonal, Branches fastigiate, Leaves spatulate elliptic 3-nerved, lower ones large, Cymes fastigiate few-
18366 Stem terete, Leaves lanceolate-acuminate 3-nerved scabrous ciliated, Cor. 5-cleft, Filaments monadelphous

β All parts of plant more pilose than the species, Corollas larger and deeper scarlet
γ Leaves very narrow [Calycine segm. foliaceous
18367 Glabrous, Bran. subtetragonal, Lvs ovate-acuminate entire, Stipules broad ciliated, Flws corymbose, Ped. leafy,
18368 Lvs ovate lanc ciliated, Stipules setac, Racms 3-5-flwd, Pedicels downy studr, Flws drpg, Segs of Cal acum.
18369 Lvs 3 in a whorl or rameal ones opp ov-acute scabr, Segs of Cal lanc-lin. falac, Cor strig with obov. segs
18370 Lvs ovate, Stipules tridentate, Segments of Corolla acute spreading, Flower terminal corymbose
18371 Lvs ternate ovate-acuminate slightly hairy above downy-villous beneath, Corymbs subtrichot., Cor. glabrous

18372 Lvs ovate-oblong glabrous, Stipules cuspidate connate at base, Corymb trichotomous, Peduncles long
18373 Lvs long lanceolate glabrous, Corymbs ample dense, Tube of Corolla long slender, Stamens short
18374 Lvs ovate oblong reticulated glabrous, Stipules short broad acuminated, Cymes large dense compound
18375 Lvs lanceolate acuminate glabrous, Corymbs trichotomous, Segments of Corolla and Calyx linear
18376 Lvs oblong lanc tapering at base, Stipules ovate, Panicle corymb ample loose-flwd, Tube of Cor. very slender
18377 Lvs oblong tapering to both ends glab, Corymbs almost sessile, Stipules subulate at top, Lobes of Cor acute
18378 Lvs large elliptic coriaceous shining, Stipules broad-ovate, Panicle terminal ample trichotomous, Tube of Corolla long

18379 Lvs obovate nearly sessile glabrous, Stipules connate, Flowers corymbose

[base with a spreading rather reflexed limb
18380 Lvs nearly sessile lanceolate slightly glaucous, Calycine segments 4-8 reflexed, Corolla hairy, tube swollen at
18381 Branches terete, Lvs ovate, Peduncles 2-leaved 1-flowered, Corolla 4-cleft, Filaments villous, Style smooth

[red, Racemes circinate secund
18382 Humble, Branches terete downy, Leaves opposite a little hairy shining above, Petioles branches and peduncles

[Racemes radical many-flwd, Nectaries cuculiate
18383 Hairy, Lvs ternate or biternate, Lflts on long petioles, adult ones glabrous cordate-ovate ciliately serrated,
18384 Lvs ternate, Petals exceeding the calyx, Style filiform subcentral, Stigma a little lobed

18385 Smooth, Leaflets 3 linear-lanceolate revolute acute, Peduncles bi-trichotomous, Corolla reflexed
18386 Branchlets downy, Leaflets 3 lanceolate, Panicles trichotomous, Petals obovate dotted downy
18387 Smooth, Leaflets 3 obovate thickish, Peduncles axillary corymbose

DIGYNIA.

18388 Lvs serrated purple beneath and beautifully marbled with green and white above silky

18389 Lvs ovate-elliptic acuminated quite entire covered by hairs which are fixed by their centres, Limb of Calyx truncate entire

TETRAGYNIA.

[8-furrowed 4-seeded
18390 Lvs obov-oblong bluntish remotely serrated, Pedun axillary cymose, Flws tetrandrous, Stigma 4-lobed, Fruit
18391 Lvs ellip. mucron spinj-tthd rounded at base, Spks usually twin-bran. downy, Flws pentand, Stigma entire

and Miscellaneous Particulars.

is imbibed Some mix sugar with it, others add a few drops of lemon juice; and by pouring fresh boiling water the infusion may be renewed The Creoles are very fond of it, and never travel without a supply. They drink the infusion at every meal, and never eat until they have taken some of it. It must be drunk directly, for if suffered to remain long the liquor would become as black as ink The pipe of the mate or teapot, called bombilla, is perforated with holes at the top to prevent swallowing the pulverised herb The whole party is supplied by handing the mate and pipe from one to another, filling up the vessel with hot water as fast as it is drunk out. The repugnance of Europeans to drink after all sorts of people, in a country where diseases are so common, has occasioned the intro-

History, Use, Propagation, Culture,

duction of small glass tubes with which each person is sometimes provided. The leaves when green taste something like mallow leaves, they are roasted and dried, and almost pulverised, before they are packed. There are three kinds of it in its prepared state, although produced by the same plant, which go under the names of *Caa-cuys*, *Caa-mini*, and *Caa-quaxu*, the first is the buds of the leaves when hardly expanded, the second is the leaves stripped of the ribs before roasting, and the third is roasted without any preparation. The people boast of the innumerable qualities that this herb possesses It is certainly aperient and diuretic, but the other qualities attributed to it are rather doubtful. Like opium it produces some singular effects; it gives sleep to the restless and spirit to the torpid. The

Page 108. CLASS V.—PENTANDRIA. 5 STAMENS.

Order 1. MONOGYNIA. 5 Stamens. 1 Style.

2871. 324*a*. *Plumbaginélla* Calyx 5-parted, 5-ribbed, 5 crested, beset with stipitate glands, small, but large in the fruit-bearing state Segments 1—2-toothed. Corolla tubular, 5-lobed, shorter than the calyx, cuspidate. Style filiform Stigmas 5, filiform. Utriculus oblong, calyptriform at top

2872. 325*a*. *Valoràda* Calyx glumaceous, of 5-linear 3-nerved segments Corolla salver-shaped, 5-parted Stamens 5, hypogynous, free. Anthers linear, bifid at base. Style filiform. Stigmas 5. Utriculus subcoriaceous, 5-valved below and calyptriform at top. Seeds fusiform, somewhat 5-ribbed.

2873 330*a* *Amsinckia*. Calyx 5-parted. Segments linear gibbous. Corolla funnel-shaped Segments of limb roundish Throat naked. Stamens enclosed. Nuts 4, gibbous outside, conniving at top, wrinkled outside.

2874 340*a* *Macromèria* Calyx 5-parted Corolla 5-cleft, funnel-shaped Lobes acute Throat naked Anthers linear-oblong, incumbent Style a small prunose dot Ovaria 4, combined

2875 345*a* *Arnèbia* Calyx 5-parted. Corolla funnel-shaped. Tube long. Throat naked Lobes rounded Anthers enclosed Style bifid. Stigmas 2 round Nuts 4, truncate

2876. 368*a* *Gemóstoma* Calyx small, 5-lobed Corolla funnel-shaped, 5-parted· Throat bearded. Stigma didymous Capsule oblong. Valves 2, woody, with inflexed margins Seeds many, angular, wingless

2877 370*a*. *Cyanánthus* Calyx campanulate, 5-cleft Corolla funnel-shaped, with an ample tube and a 5-cleft limb Stamens enclosed Anthers connivent Style simple. Stigma 5-cleft. Capsule oblong-conical, 5-celled, 5-valved Valves carinately horned Seeds many, oblong-linear

2878. 371*a* *Cánlua*. Calyx tubular, 5-toothed, often cleft on both sides Corolla funnel-shaped· Tube long Lobes of limb obcordate, convolute in æstivation Stamens inserted near the base of the tube. Cells of Capsule many-seeded. Seeds compressed, girded with a membranous wing

2879 377*a* *Desfontainea* Calyx 4—5-parted, nearly equal Corolla tubular, 4—5-lobed Lobes roundish, retuse Stamens 4—5. Anthers erect, 2-celled Berry 1-celled, many seeded, with 4—5 parietal placentas. Seeds angular

2880 377*b* *Juanulloa* Calyx large, inflated, 5-parted Corolla tubular gibbous under the throat. Limb small, 5-lobed Stamens villous at base. Berry ovate, 2-celled, many-seeded, girded by the large calyx Seeds reniform

2881 378*a*. *Lvánthus*. Calyx pentagonal, 5-winged, 5-parted Corolla 5-parted, funnel-shaped. Stamens unequal Stigma capitate or umbrella-shaped, glandular disk none Capsule 2-celled.

2882 380*a* *Whitleya* Calyx campanulate, unequally 5-lobed Corolla campanulate. Stamens straight. Berry 2-celled, enclosed in an inflated calyx, operculate.

2883 381*a*. *Physochlaina* Calyx ventricose. Corolla campanulate, regular Stamens inclinate. Capsule hidden by the inflated calyx, operculate.

2884. 384*a*. *Jacquemóntia*. Sepals 5 Corolla campanulate. Stigmas 2, ovate, flattened. Ovarium 2-celled Cells biovulate

2885. 384*b*. *Exogònium*. Sepals 5. Corolla tubular. Stamens exserted Stigma capitate, 2-lobed Ovarium 2-celled Cells biovulate.

2886. 384*c* *Batàtas*. Sepals 5. Corolla campanulate Stamens enclosed. Stigma capitate, 2-lobed. Ovarium 4-celled Cells 1-seeded. Capsule 4-celled, seldom 3-celled

2887 385*a*. *Rivea*. Sepals 5 Corolla funnel-shaped. Stigma capitate, 2-lobed Ovarium 4-celled, 4-ovulate Capsule baccate

2888. 385*b*. *Mina*. Calyx short, naked. Corolla salver-shaped. Tube short, contracted at the base. Limb ventricose Stigma capitate. Stamens unequal, exserted. Ovarium 4-celled. Cells 1-seeded.

2889. 385*c* *Calbòa*. Sepals 5, furnished with a subulate process on the back of each Corolla with a curved cylindrical tube and a campanulate 5-lobed limb. Stamens declinate.

2890 395*d* *Cyathòdes*. Calyx with many bracts. Corolla funnel-shaped, without any hairs or glands· Limb spreading. Stamens enclosed. Ovarium 5—10-celled. Drupe baccate.

2891. 401*a*. *Cystánthe*. Calyx foliaceous. Corolla closed, hood-formed, dehiscing transversely, with a truncate persistent base. Stamens hypogynous, persistent. Hypogynous scales 5.

2892. 411*a* *Alýxia*. Corolla salver-shaped. Throat naked. Stamens enclosed. Stigma obtuse, usually pencilled Drupes 2, solitary by abortion.

2893. 413*a* *Aganósma* Corolla funnel-shaped. Hypogynous scales long, combined Stigma conical, mucronate

2894. 413*b* *Mandevilla* Calyx 5-leaved, furnished with a pectinated ring inside. Corolla funnel-shaped Throat naked Filaments enclosed. Anthers conniving into a cone around the stigma Stigma conical, having 5 pits or hollows at the side, with a 5-lobed campanulate base, and a bicuspidate apex. Hypogynous ring 5-lobed, fleshy Lobes truncate.

2895. 413*c*. *Roupéllia*. Calyx 5-parted, with a circle of about 12 glands at the base. Corolla funnel-shaped Throat crowned by 10 combined ligulæ. Stamens enclosed. Style dilated at top into a 5-furrowed mass, to which the anthers adhere Nectary wanting.

2896. 413*d* *Dipladènia* Calyx 5-parted: Lobes with 1-2 glands at the base of each. Corolla funnel-shaped, hispid about the origin of the stamens. Anthers sessile. Glands 2, alternating with the ovaria. Stigma globular, with a reflexed membrane at bottom

2897. 413*e*. *Rhynchospérmum*. Calyx 5-cleft, or 5-parted, with many glands inside the tube; glands truncate Corolla 5-cleft; Tube cylindrical. Lobes oblique-obovate Anthers hastate, adhering to the middle of the stigma Nectary cup-shaped, 5-cleft. Stigma oblong. Follicles elongated, many-seeded.

2898. 414*a*. *Parsónsia*. Calyx 5-parted Corolla funnel-shaped, 5-parted. Throat naked. Stamens exserted Anthers sagittate, cohering by their middle to the dilated stigma. Hypogynous scales 5. Follicles 2, distinct or combined

18392 Lvs ovate bluntish serr. shining above, Pedicels aggreg longer than petioles rising above axils of leaves
18393 Lvs obl. coriac. marginate trun spinose on adult plants 3-horned entire, Umbels axil. sessile, Berries 4-seeded
18394 Lvs oval quite entire acute at both ends glabr, Umbels pedunculate shorter than the petioles, Fruit 4-seeded
18395 Lvs oval-oblong acuminated spiny-toothed
18396 Lvs elliptic-oblong mucronate remotely spiny-serrated, Flws sessile in axillary fascicles, Fruit 2-seeded

18397 Lvs ovate acute ciliately serrated, Pedicels axillary solitary 1-flowered drooping
18398 Lvs oval or ovate coriaceous smooth quite entire, Peduncles numerous cymose axillary

and Miscellaneous Particulars.

leaves are called in Paraguay *Yerva-mate*, and by the French *Herbe du Paraguai* The *Ilex Gongônha*, the leaves of which afford a kind of tea called Gongonha in Brazil, and which by some is considered identical with that of Paraguay, grows in the provinces of Minas Geraes and St. Paul, and when the export of tea from Paraguay was prohibited by Dr Francia the dictator, the inhabitants of the other states, who were formerly supplied from Paraguay, were obliged to use that from Brazil, which was found to be much inferior Persons ignorant of the specific distinctions between the two trees have attributed the inferiority of the Brazil kind merely to the different mode of preparing the leaves.

2899 414*b*. *Lyónsia* Calyx 5-cleft Corolla funnel-shaped Limb 5-parted Segments equal-sided: Throat naked Stamens exserted. Anthers sagittate, cohering by their middle to the stigma Style dilated at apex. Stigma concave Hypogynous scales connate Capsule cylindrical, 2-celled, dissepiment free

2900 418*a*. *Adènium* Calyx 5-parted Lobes lanceolate, glandular Corolla downy with a cylindrical tube, widened upwards, and a 5-parted limb Stamens short. Anthers linear-sagittate, cohering to the stigma, terminated by a hair-like seta Hypogynous glands none Ovaria 2, globose Stigma capitate, bidentate

2901 431*a* *Lacepèdia* Calyx 5-parted. Petals short, unguiculate Ovarium 3-celled Cells 8-ovulate. Style triquetrate, at length tripartite Berry tricuspidate, 6—9-seeded

2902 434*b* *Ulùcus* Flowers membranous Exterior Calyx open, joined, 2-parted Inner one of 5-segments or sepals, equal, awned. Stamens enclosed, joined at base into a fleshy urceolus. Ovarium ovate. Style short, thickened towards the apex. Fruit ovoid, hid by the unchanged calyx

2903 435*a*. *Labìsia* Calyx small, 5-toothed Corolla coriaceous, 5-parted Segments induplicately valvate in æstivation, reflexed and apiculated at apex Style subulate Drupe pea-formed, 1-seeded

2904 435*b* *Coryneràtipus* Calyx of 5 concave sepals Corolla of 5 rounded petals, alternating with as many petal-like scales, which are furnished with a gland inside at base Stamens rising from the claws of the petals. Stigma obtuse. Drupe club-shaped, containing a single 1-seeded nut

2905. 437*a* *Fagræ'a*. Calyx 5-parted Corolla funnel-shaped Limb 5—6-parted Stamens 5—6, inserted in the mouth of the tube Style filiform Stigma orbicular Berry 2—6-celled, many-seeded Seeds angular

2906 445*a* *Habrothámnus* Calyx campanulate, 5-toothed Corolla clavately tubular Limb 5-toothed. Stamens enclosed Stigma capitate, obsoletely 2-lobed Berry girded by the calyx, 2-celled Seeds few, angular.

2907 445*b*. *Isochìlma* Calyx tubular, a little inflated, 5-toothed Corolla tubular, 5-toothed Stamens enclosed. Style clavately capitate, bifid Ovarium 2-celled Berry enclosed in the calyx. Seeds numerous, compressed, orbicular or reniform

2908 446*a*. *Hebeclàdus* Calyx 5-parted Corolla funnel-shaped, 5-lobed, usually with teeth between the lobes. Stigma clavately capitate, a little 2-lobed Berry globose, small Seeds compressed, reniform

2909 450*a* *Chænéstes* Calyx tubular, unequally 5-toothed, at length cleft laterally. Corolla tubular, 5-lobed, with floccose edges and with small teeth between the lobes Stamens nearly enclosed Stigma clavate, 2-lobed Berry 2-celled, obovate, enclosed in the cleft calyx Seeds many, wrinkled, reniform

2910 460*a* *Rogiera*. This genus differs principally from *Rondeletia* by the absence of the prominent ring in the throat of the corolla

2911 460*b*. *Péntas* Calyx 5-cleft, sometimes with 1 or 2 teeth in the sinuses Corolla with an elongated tube, and a campanulate throat, which is bearded inside Limb spreading, 5-cleft. Stamens short Epigynous disk thick. Style filiform, 2-lobed Capsule nearly globose, many-seeded.

2912 460*c* *Hindsia*. Calyx turbinate Limb 4—5-cleft. Segments unequal, foliaceous at top Corolla funnel-shaped, with an elongated tube, and a 5-cleft-limb Anthers sessile at top of tube Ovarium 2-celled. Branches of Style linear, papillose Capsule corticate, 2-valved

2913 460*d* *Hugginsia* Limb of calyx 4—5-toothed Corolla salver-shaped, 4—5-parted Throat naked. Stamens inserted in the middle of the tube, enclosed Stigmas 2. Berry oblong, subtetragonal, many-seeded

2914 460*e* *Imènia*. Calyx turbinate, 5-ribbed Limb 5-cleft Corolla salver-shaped, with a very long slender tube, and a 5-parted spreading limb. Anthers sessile, linear. Style bifid at top Capsule 2-celled. Seeds numerous, angular

2915 463*a* *Adenóphora* Calyx 5-cleft. Corolla campanulate, 5-lobed Stamens free. Nectary girding the base of the style Style pilose Stigmas 3 Capsule 3-celled.

2916. 463*b*. *Platycòdon* Calyx and Corolla 5-lobed. Stamens and Stigmas 5 Capsule 5-celled.

2917. 463*c*. *Glossocòma* Calyx 5-lobed, foliaceous, reflexed. Corolla campanulate, 5-lobed. Stigmas 3, ovate. Capsule 3-celled.

2918. 464*a* *Isolòma* Calyx 5-parted, nearly equal. Corolla salver-shaped or funnel-shaped, nearly equal. Segments nearly equal. Stamens combined into a tube. Anthers cohering, beardless, two lower ones mucronate. Stigma capitate Capsule 2-celled, many-seeded

2919 464*b* *Centropògon*. Calyx 5-parted, with a globose tube Corolla with an incurved tube, and a 5-cleft limb upper Segments larger, falcate; lower ones spreading. Two lower Anthers generally ending in an ovate, triangular, cartilaginous, solitary gland. Annulus fleshy, between the limb and the calyx. Berry globose, 2-celled

2920 477*a*. *Weigèla*. Calyx pentagonal, adnate to the ovarium, 5-lobed. Lobes lanceolate. Corolla funnel-shaped. Throat wide Lobes ovate, roundish. Stamens adnate to the corolla. Style a little exserted. Stigma peltately capitate Ovarium 2-celled, many-seeded

2921 485*a* *Rhodóstoma* Calyx tribracteate, 5-cleft. Segments recurved. Corolla funnel-shaped. Tube long Limb 5-lobed; Segments lanceolate, mucronate by reflexed plicæ Stamens short, inserted at top of tube. Ovarium 2-celled Ovula solitary in the cells Style simple. Stigmas 2, linear.

2922 486*a* *Sherbournia*. Lobes of calyx foliaceous, cuneate Corolla fleshy, funnel-shaped: Tube narrow at base, hairy inside at base. Stamens short, inserted above the middle of the tube. Ovarium crowned by a large disk or hemispherical gland. Stigma clavate.

2923 486*b* *Hinsia*. Lobes of calyx foliaceous, oblong Corolla salver-shaped, hairy, with 5 undulated lobes. Throat hairy. Anthers sessile Style filiform Stigmas 2, linear. Fruit globose, 2-celled, many-seeded. Seeds wingless, nestling on the superficies of the placentas

2924 507*a*. *Cùltha*. Calyx flat, 5-lobed. Petals 5. Capsule 3—4-sided, 3—4-celled. Cells 1-seeded. Stigma 3-parted.

2925 515*a* *Sóllya* Calyx small, 5-parted, the hind segment the largest. Petals 5, ovate, nearly equal, campanulately spreading Stamens erect. Anthers cohering at top Ovarium terete, 2-celled, many-ovulate. Style short, erect, continuous with the ovarium Stigma obsoletely 2-lobed. Berry fusiform, dry, many-seeded.

2926. 515*b*. *Prondya.* Calyx 5-leaved: Leaves acuminate, equal. Petals 5, obovate, equal, campanulately conniving, subrevolute at apex. Stamens erect. Ovarium terete, 2-celled, many-ovulate. Style short, terete, articulated with the ovarium. Stigma acute. Berry cylindrical, many-seeded.

2927. 515*c*. *Maranthus.* Calyx small, 5-parted, equal Petals 5, equal, spatulate, with conniving claws. Stamens ascending. Ovarium declinate, oblong, compressed, 2-celled. Style filiform, subfalcate, continuous with the ovarium Stigma capitate

2928 520*a*. *Lemònia.* Sepals 5 Corolla 5-cleft, unequal: Tube straight. Stamens 5, inserted in the tube, 2 fertile ones sessile; three sterile ones horned, longer than the tube, covered with glands. Disk cup-shaped, notched. Carpels 5, 1-seeded

2929. 520*b*. *Pentarhàphia.* Calyx of 5 narrow stiff lobes, not unlike 5 brown needles. Corolla tubular, 5-cleft. Style projecting

2930 520*c*. *Metrodòrea.* Calyx 5-cleft Petals 5 Ovarium buried in the disk and confused with its substance. Fruit tubercled 5-lobed, 5-celled. Cells 1—2-seeded.

2931. 520*d*. *Almèda.* Calyx 5-toothed Petals 5. Ovaries 5, connected at base. Fruit only of 1 or 2 1-seeded carpels.

2932. 520*e*. *Erythrochìton.* Calyx tubular, 5-cleft, connected into two nearly equal lips. Corolla 5-cleft. Fruit of 5 1-seeded carpels.

2933. 524*a*. *Corethróstylis* Calyx petaloid, 5-parted. Corolla none. Style long, hispid from fascicles of bent-back hairs, broom-formed. Capsule 3-celled, 3-valved. Cells 1-seeded

2934. 524*b*. *Guichenòtia.* Calyx 5-parted. Petals 5, gland-formed. Ovary 5-celled. Cells containing 5 ovula

2935. 541*a*. *Schweiggèria* Sepals 5, unequal, exterior ones hastately, biauricular at base Lower petal large, cordate, drawn out into a spur at base Stamens free. Appendages of anterior anthers subulate.

2936. 542*a*. *Cryptándra.* Calyx campanulate, 5-cleft Petals small, cucullate, sessile. Stamens enclosed Anthers 2-celled. Disk wanting. Fruit containing 3 seeds.

Order 2. DIGYNIA. 5 Stamens. 2 Styles.

2937. 579*a* *Schubèrtia* Calyx 5-parted. Corolla funnel-shaped. Corona simple, of 5 retuse lobes. Stigma turbinate. Gynostegium short.

2938. 590*a* *Trichosáchme.* Calyx 5-cleft. Corolla with long feathery tails, which are perhaps analogous to the tails of *Strophánthus.*

History, Use, Propagation, Culture,

2871. *Plumbaginélla* being an annual, the seeds only require to be sown in the open ground, in a warm sheltered situation, in a mellow soil.

2872. *Valorádia* is a creeping-rooted pretty plant, and answers well to be planted out into beds in summer. It grows on the ruined ramparts of Shanghai in China, also out of the stone-work on the city wall.

2939. 592*a*. *Dictyánthus.* Calyx of 5 broad-lanceolate lobes Corolla urceolate below: Limb reflexed, with 5 long horn-like segments, having the margins recurved. Corona simple, of 5 large spreading lobes.
2940 592*b* *Cyrtóceras.* Calyx 5-parted. Corolla rotate, tomentose at base inside · Segments linear, acuminate. Corona smooth Leaflets acuminated at both ends. Anthers oblong, obtuse, terminated by a bidentate membrane.
2941. 592*c*. *Raphistémma.* Calyx 5-cleft. Corolla campanulate. Leaflets of simple Corona elongated, compressed. Follicles ventricose Anthers each terminated by a membrane
2942. 592*d*. *Stephanótis* Calyx of 5 sepals. Corona simple, 5-leaved. Anthers terminated by a membrane. Follicles horizontal. Seeds pulpy
2943. 592*e*. *Oxypétalum.* Calyx campanulate: Tube ventricose. Gynostegium exserted. Leaflets of simple corona fleshy, obtuse. Anthers each terminated by a membrane.
2944 601*a* *Wigándia.* Calyx of 5 sepals. Corolla funnel-shaped. Stamens exserted. Stigmas capitate. Capsule 2-celled. Placentas 4, at first joined by twos, afterwards free.
2945 623*a*. *Xanthósia.* Margin of calyx 5-lobed. Petals stipitate, oval, cuspidate, replicate at apex. Style filiform, rising from the base of the stylopodium. Fruit compressed. Mericarps contracted at the commissure, with 7—9 filiform ribs, the 2 lateral ribs marginating.
2946 623*b*. *Astrótricha* Calyx 5-toothed Petals 5, oval, clothed with stellate down outside. Styles thickened at base. Mericarps contracted at the commissure, with 3 primary dorsal ribs, and 2 acute nearly obsolete marginal ones, and 4 secondary ones with vittæ in the commisure, which are covered by a spongy pellicle, but none in the furrows.
2947 668*a* *Nárthex.* Margin of calyx obsolete. Stylopodium urceolate Styles filiform, at length reflexed. Fruit compressed from the back, and girded by a dilated margin. Mericarps with 5 primary ribs, the 3 intermediate ones filiform, the 2 lateral ones close to the margin, and nearly obsolete. Vittæ in the dorsal furrow usually solitary.

Order 5. PENTAGYNIA. 5 Stamens. 5 Syles.

2948 669*a*. *Grammánthes.* Calyx 5-cleft. Corolla 6-lobed. Stamens 5—6, enclosed. Scales none. Styles and carpels 5
2949 706*a*. *Acantholimon.* Calyx funnel-shaped: Limb scarious, multiplicate, 5-nerved, shortly 5-lobed Corolla gamopetalous only at base, forming a ring, the rest free with long claws, the edges of the claws so close as to form a kind of tube. Ovarium linear, tapering into the 5 styles. Stigmas capitate Utricle membranous, acutely 5-sided, opening by a conical lid, and also splitting irregularly into 5 valves at base.

MONOGYNIA.

18399 Annual, Stem terete, Leaves rhomboid, Petiole winged stem-clasping and auricled at the base, Spikes few-flowered, Bracts and calyx glandular

18400 Stem furrowed erect branched, Lower Leaves oblong a little denticulated with stem-clasping petiole, the rest [sessile cordately auricled, Spikes axillary and terminal

18401 Branches flexuous angular rather bristly, Leaves obovate obtuse ciliated, Flowers in dense bracteate 3—7-flowered clusters, Lobes of Corolla obcordate

18402 Flowers beautiful dark purple, Plant more diffuse

18403 Leaves obovate rather strigose, Calyx covered with adpressed bristles, Corolla flat, Lobes somewhat emarginate
18404 Calyx beset with uncinate bristles, Limb of Corolla concave shorter than the tube
18405 Stem decumbent at base bristly, Segments of Calyx linear, Limb of Corolla with emarginate lobes

18406 Throat of Corolla glabrous naked, Limb twice shorter than the tube
18407 Throat of Corolla bearded, Limb 3 times shorter than the tube
18408 Throat of Corolla glabrous naked, Limb rather shorter than the tube
18409 Throat of Corolla glabrous half-closed by plicæ, Limb length of tube

[Flowers racemose panicled

18410 Stems branched, Leaves lanceolate, radical ones on long petioles, cauline ones sessile, upper ones bract-formed,
18411 Stems much branched hispid, Leaves linear bluntish hispid, Racemes few-flowered crowded
18412 Stems diffuse, Lvs linear-oblong obtuse hispid, Flws sess. aggregate 4 times shorter than bracts, Nuts spherical

and Miscellaneous Particulars.

2873 *Amsinckia* is a genus of pretty annuals The seed only requires to be sown in the open ground in April, in a dry, warm, sheltered situation.

History, Use, Propagation, Culture,

2874. *Macromèria* is a fine half-hardy perennial, and grows best in an equal mixture of sandy loam and fibry peat. It ripens seed if kept in a greenhouse, by which it is propagated Its foliage is too coarse to make it a valuable ornamental plant; and its flowers, which always droop, fall off soon after opening, so that it never looks so well as its showy appearance on paper or in the herbarium would lead us to expect.

18413 Stems decumbent, Leaves linear obtuse hispid undulated longer than the stems, Racemes terminal few-flowered
18414 Strigose, Leaves linear-oblong coarsely toothed, cauline ones undulately curled, Spikes loose, Calyx inflated pendulous, Nuts triquetrous [short in 1 series

18415 Pilose branched, Lvs oblong sessile, Racemes elongated, Flws nearly sessile, Nuts small marginate, Prickles
18416 Pil., Lvs obl upper ones cordately stem-clasping, Racs bractless, Nuts marg., Prickles in 1 ser , Tube of Cor long
18417 Clothed with whitish down, Rad Lvs lanc. on long pets, caul ones lin lanc. sess , Pan loose, Nuts mur in disk
18418 Downy, Cauline Leaves ovate cuneated at base, radical ones cordate-ovate on long petioles, Racemes bractless, Nuts marginate glochidate

18419 Stems hispid, Leaves lanceolate mucronate scabrous, Style and Stamens much exserted

18420 Stems erect much branched, Leaves linear-lanceolate obtuse downy revolute and white beneath

18421 Erect pilose, Leaves sessile tomentose bluntish, radical ones oblong-obovate, cauline ones spatulate, Spikes terminal, Bracts foliaceous

18422 Shrubby, nearly glab., Lvs terete fascicled, Pedun elong , Cal hairy, Plicæ of Cor. pilose, Nuts many-celled
18423 Clothed with viscid down, Stems filiform, Petioles ciliate, [lobe emarginate, the other tridentate, Ovary 5 lobed Leaves ovate-obtuse, Calyx campanulate 2-lobed, one

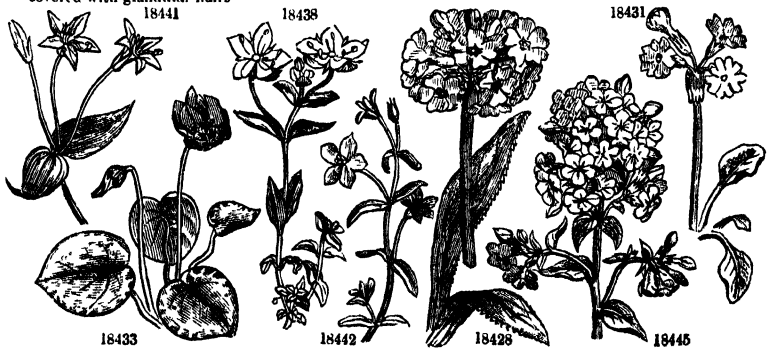
18424 Caulescent procumbent hairy, Lvs scattered obovate-lanceolate, Pedun. terminal elon., Umbel many-flowered

18425 Robust, Leaves erect, Scape few-flowered, Flowers large, Corolla spreading with bidentate segments [mibifid
18426 Lvs on long pet. subcord obt. repand glabr., Scp 5—7-flwd, Peds longer than invol , Lbs of Cor rounded se-
18427 Lvs obovate oblong obtuse doubly-tthd, Scape elong , Flws umbellate, Lflts of Invol lanc., Segs of Cor emarg.
18428 Lvs broad-lanc mealy ben serr., Scape mealy, Invol. many-lvd many-flwd, Calyx mealy, Cor. lbs subcrenated
18429 Lvs obov -lanc downy wrinkled uneq dentic , Flws densely umb , Cor Limb flat, Segs 2-lbd, Cal teeth gland cil
18430 Lvs obl -lanc dentic mealy, Scape elon , Flws densely capit., Lflts of invol. lanc., Cal scurfy, Seg. of Cor emar
18431 Lvs on long petioles ovate-oblong obtuse nearly entire glabrous, Scape tall 2-3-flowered Leaflets of Invol oval, Lobes of Corolla obcordate, Root bulbous

18432 Lvs orbicular, Scape 1-flowered, Pedicels clothed with short glandular down, Corolla cleft to the third of its length, Flowers whitish

[subulate
18433 Root small round, Lvs deeply cordate roundish entire spotted, Segments cordate oblong, Calycine segments
18434 Root vry lrge with sevrl crwns, Lvs cord -ovl broad subang uneq. cren white-veind and zoned, Cor. tube glob.
18435 Lvs heart-shaped with an open sinus very slightly sinuate-toothed zoned greyish-green purple beneath, Tube of Cor ventricose, Mouth pentagonal, Segments of Cor. obovate

18436 Glabr , Lvs a little tthd entire dotted, radical ones oval, rameal ones lin.-spatul , Flws racem , Bracts subulate
18437 Ascending, Lvs ovate a little serrated, Racs naked many-flwd, Flws nutant, Cor. campanul., Stamens exserted
18438 Erect, Lvs ovate-lanceolate, Peduncles axillary solitary 1-flowered, Segments of Calyx subulate
18439 Erect, Lvs opposite or twin lanceolate a little serrated glabrous, Racemes terminal, Lobes of Corolla spatulate erosely denticulated



18440 Trailing, Lvs alternate ovate. Near to *Anagállis tenélla*

18441 Glabrous, Lvs ovate-lanceolate acuminate sessile 3—5-nerved, Peduncles 1-flowered longer than the leaves

18442 Glabrous much branched, Leaves linear or oblong-ovate acute, Peduncles solitary 1-flowered, Segments of Calyx oblong acute, Segments of Corolla obovate
18443 Dark green smooth, Lvs 3—5-nerved ovate-lanceolate, Calyx 5-parted, Corolla large with an expanded 5-parted limb, Stamens exserted

18444 Lvs elliptic-lanceolate, Racemes axillary, Pedicels bibracteate, Lobes of Calyx subulate, Lobes of Corolla hairy at top

[panicled drooping before expansion
18445 Stem rather flexuous downy spotted, Leaves oblong-lanceolate glabrous above scabrous beneath, Corymbs
18446 Lvs and petioles fringed with white hairs on the midrib and margins lanceolate acuminate, Tube of Corolla covered with glandular hairs

and Miscellaneous Particulars.

2875. *Arnèbia echioides* has much the habit of *Lithospérmum canéscens*, and, like it, is an evergreen herb, well fitted for decorating rockwork It can only be increased by seed.

2876. *Gensóstoma.* This genus is nearly related to *Logánia.* It consists of greenhouse shrubs, and they should be treated in the same manner as recommended for the species of *Logánia*, p 130.

History, Use, Propagation, Culture,

2877. *Cyanànthus* is a native of the higher ranges of the Himalayas It proves to be a delicate little herbaceous plant, with the habit of some species of *Campànula* It requires plenty of moisture during the flowering season, but afterwards should be kept rather dry and allowed to rest

2878 *Cántua* is a genus of beautiful shrubs. The Peruvian Indians, according to Ruiz and Pavon, adorn their chambers on feast days with the *C buxifolia* The ancient Indians called it the magic tree. The species have proved hardy greenhouse plants, and thrive if potted in a mixture of light loam and peat containing a portion of sand They possibly will grow freely in the open air during summer, if planted in a warm sheltered situation; some of them have succeeded in the open air in Devonshire They may be treated in the same way as *Fuchsias*. Cuttings root freely.

2879. *Desfontainea*. This is one of the plants in whose external features there is nothing to lead to a knowledge of their affinities. It has been placed in *Gentiàneæ*, *Solanàceæ*, and *Theophrástaceæ* by turns. It is an evergreen and a native of America, with a very bitter taste. The leaves are opposite petiolate spiny-toothed, very similar to those of

18447 Stems diffuse, Lvs downy, Leaflets cordate, Calyx hairy with blunt segments, Segments of Corolla obtuse
18448 Stem pilose erect with many pairs of ovate blunt pilose leaflets, Flowers a little panicled drooping, Segments of Corolla round crenulated

18449 Pilose, Lvs rhomboid cinereous beneath lobed at top, Segments of Corolla bearded at top

18450 Lvs subfascicled obovate entire or toothed, Calyx tubular downy, Limb spreading, Lobes obcordate, Stamens slightly exserted
18451 Lvs elliptic or obovate downy entire or toothed, Corymbs branched, Flowers erect, Calyx bilabiate, Stamens much exserted
18452 Branches downy, Leaves fringed with soft hairs tomentose beneath cuneate-oblong mucronate, Flower large showy

18453 Pilose, Lvs pinnate or pinnatifid, Leaflets entire, Racemes loose, Corolla fringed

18454 Downy, Lvs entire or angular, Calyx cylindrical 5-ribbed cleft lengthwise, Limb of Corolla spreading, the Segments ending in long points
18455 Smoothish, Leaves quite entire, Calyx cylindrical inflated entire or unequally 4—5-lobed, Limb of Corolla spreading acuminated

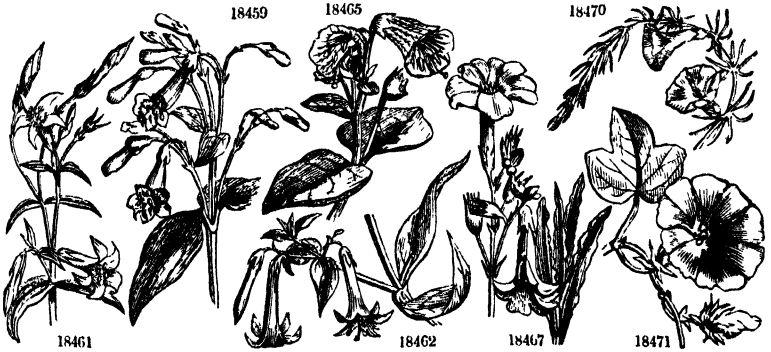
18456 Calycine segments lingulate and are as well as the leaves glabrous, Leaves opposite spiny-toothed like those of holly, Flower terminal solitary

18457 Parasitical pendent, Leaves oblong acuminated thickish alternate, Racemes dichotomous pendulous

[5-inches, Stamens enclosed
18458 Leaves petiolate oval-lanceolate glabrous, Flowers solitary pendulous, Calyx pentagonal, Corolla very long
18459 Lvs petiolate ellip -lanc , Pan. term trichot , Flws pendulous, Stamens exserted, Branches bluntly tetragonal
18460 Lvs connivent at the base, lower ones cordate, upper ones ovate, Peduncles dichotomous panicled, Flowers pendulous, Stem fistular acutely tetragonal

18461 Branches terete, Lvs decussate lanceolate acuminate 3-5-nerved, Panicle much branched loose, Flws pendulous

18462 Downy, branches tetragonal, Leaves lanceolate or oblong-lanceolate, Flowers axillary and terminal pedicellate



18463 Strong, Leaves obovate-lanceolate acuminate, Petioles connate, Umbels many-flowered involucrate axillary, Calyx wingless, Stamens exserted

18464 Strong robust downy canescent, Stem dichotomous, Leaves twin ovate-elliptic repandly lobed villous beneath, Flowers solitary drooping

[to corolla
18465 Glandularly pubescent, Lvs ovate, Panicle terminal leafy, Flws nutant, Corolla funnel-shaped, Stamens equal
18466 Leaves ovate repand or quite entire, Flowers pedicellate terminal capitate, Stamens enclosed, Fruit-bearing Calyx inflated angular glabrous

[Limb obcordate
18467 Glandular and clammy hairy, Leaves oblong-lanceolate undulated, Tube of Corolla cylindrical, Segments of

18468 Leaves palmately 5-lobed, middle lobe the longest, 2 lower lobes bipartite Peduncles axillary 1-flowered
18469 Downy, Lvs 3-5-lobed middle lobe acum lateral ones ang hairy on the veins beneath, Ped. 1-2-flwd, Sep. uneq.
18470 Stems filif. branched, Lvs glabr sess many-parted, Seg filif , Ped. 1-flwd axillary, Sep. muricated on the back
18471 Scabr , Lvs 3-lobed, lateral lobes rounded middle narrower and longer, Ped 3 flwd. Cal covered with blk hairs

and Miscellaneous Particulars.

holly. The flowers are large, terminal, and solitary; they are scarlet with a yellow limb The berries are white. It is worth cultivating for the elegance of its foliage and the brilliancy of its flowers. It should be grown in a mixture of peat, loam, and sand. Cuttings will probably root in the ordinary way

2880 *Juanulloa* is an epiphytal plant, and flourishes freely if planted in vegetable earth and kept in a moist warm stove It recommends itself both by its handsome foliage and its large richly coloured calyx.

2881 *Lisiánthus* is a genus founded on the *Lisiánthus longifolius*. The species are interesting plants, and will grow in a shady part of a greenhouse or stove, where they will flower very profusely.

2882 *Whitleya* is a strong coarse-growing plant, with something of the habit of *Belladónna*, and smelling like tobacco when bruised. It is of the most easy culture, and will grow in any soil, but requires a dry situation. It is increased either by division or seed.

2883. *Physochlaina* is a genus of desirable hardy plants, being early flowerers, and elegant when in blossom. They

History, Use, Propagation, Culture,

will grow in any soil, and are increased by division These plants are well adapted for decorating flower-borders early in spring.

18486. *Pharbitis cathártica.* It is stated that M Bauduit, a rich proprietor of St. Domingo (Fl. méd. des Antilles), discovered in this milky plant a resinous juice, which coagulates, and proves to be profoundly purgative. He formed of it a much approved syrup, which in the French colonies bears his name. The culture and propagation are the same as those for *Ipomœ'a.*

2885. *Exogònium púrga.* The root of this plant is the true jalap of commerce. Its cultivation and propagation are the same as for the tuberous-rooted species of *Ipomœ'a.*

18472 Glabr., Lvs quinate, Lflts petiol. ellip acum, Pedun twisted 1-3-flwd, Pedic. clavate, Lbs of Cor. emarg. plicate

18475 Downy, Leaves cordate 3-5-lobed, middle lobe ovate, Peduncles long hairy [lower part of the stem
18476 Glabro s, Stems suffruticose weak, Leaves linear-lanceolate a little wavy, Peduncles solitary 1-flowered from the
18477 Pilose, Lvs oblong-lanceolate entire acute, Peduncles 1-flwd bibracteate thickened above, Sepals very unequal
18478 Stems elon. climb. or trail, Lvs ovate-obl. ent ciliated, Petioles villous, Pedun. axil 1-flwd, Sep narrow ciliated
18479 Glabrous, Leaves oblong-lanceolate obtuse mucronate thickish, Peduncles 1-flowered bibracteate in the middle, Sepals elliptic

18480 Lvs roundish cordate subrepand, the veins elevated and woolly beneath, Flws solitary, Stem usually tuberculate
18481 Stem and Lvs hairy. Radical Lvs cordate repand toothed, Cauline Lvs palmately pedate cut, Peduncles 2-flwd
18482 Lvs cord acum, low. ones ent, up ones 3-lobed, Ped. 1-flwd warted, Cap hry 3-celled 3-seeded, Seg of Cal obl.
18483 Procumbent, Branches erect downy, Lvs lin. entire clothed with silky white down, Pedun. solit 1-flwd bibract.

18484 Climbing, Lvs cordate acum. entire or 3-lobed pilose, Cymes many-flwrd capitate, Sepals and Bracts lin. pilose
18485 Stem fruticose warted, Leaves roundish cordate acuminate villous, Peduncles many flowered, Calyx villous
18486 Climbing glabrous, Leaves cordate or cordately 3-lobed, Peduncles 1-3-flowered, Bracts lanceolate
β Flower rose-coloured

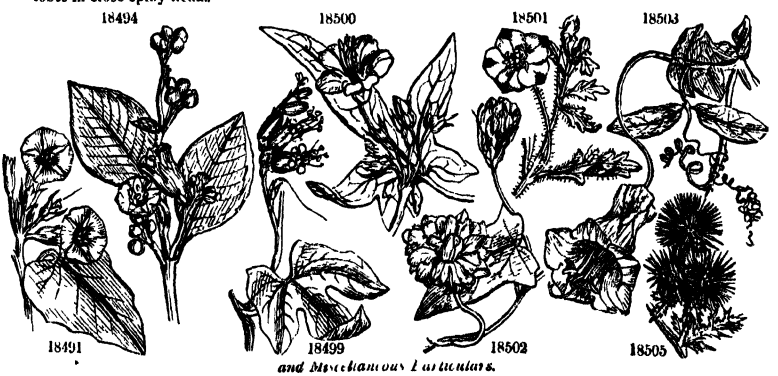
18487 Stem hairy, Lvs cordate entire angular or 3-lobed acuminate pilose, Pedun solitary 1-flowered, Sep hispid linear
18488 Climbing, Lvs hastate tripartite glabrous glaucescent beneath, Peduncles 3-4-flowered, Sepals obtuse glabrous, Limb of Corolla obsoletely 10-lobed

18489 Downy scabrous, Lvs oblong cordate on long petioles, Cymes pedunculate dense-flowered, Sepals oblong obtuse

18490 Lvs cordate acum entire glabr, Pedun 2-3-flowered, Tube of Cor. long, Limb spreading, Lobes emarginate

18491 Lvs ovate cordate angular or somewhat 5-lobed, Rac compound contracted, Sepals acum, Root fusiform red

18492 Lvs ovate clothed with fine brown silky hairs underneath, Flowers cymosely panicled
18493 Tomentose cinereous, Lvs ovate-elliptic obtuse clothed with velvety down especially beneath, Cyme many-flwd
18494 Lvs ovate oblong smooth above and clothed with silky down beneath, Peduncles corymbosely many-flowered
18495 Tomentose, Lvs large cord glab above clothed with silky down and nerved beneath Flws umbellately capitate
18496 Hairy, Lvs cord. acum. glabr above and clothed with adpressed strigæ beneath, Ped corymbosely many-flwd



18497 Lvs cordate roundish, Peduncles 1-flowered rarely 2-4 flowered, Sepals roundish, Corolla inflato-cylindrical
18498 Lvs orbicularly cordate, Peduncles elongated spicately panicled, Sepals ovate-lanceolate obtuse, Corolla narrow tubular

18499 Lvs 3-lobed, Racemes forked, Flowers secund erect

[Flowers umbellate
18500 Lvs on long petioles very variable in form some cord some sagittate others hastate, lower ones deeply angular,

[Calyx reflexed, Appendages crenulated convolute
18501 Lvs pinnatifid lyrate, Segs short obtuse 2-3-lobed and entire, upper ones 3-lobed, Peduncles 1-flwd, Sinuses of [margins
18502 Pubescent, Lvs oblong hastate, Lobes angular, Peduncles angular 1-flwd, Bracts ovate ciliated with reflexed [wards, Stamens not exserted
18503 Lflts 3 pair, Upper pair narrow ovate acum oblique at base, Lower pair stipule-formed reniform acum down-
18504 Lflts obovate ciliated at base, Segments of Calyx lanceolate ciliated, Stamens much exserted

18505 Plant hairy and viscid all over, Lvs spiny dark green cut into sharp segments, Flws among bracts and calyx lobes in close spiny heads

and Miscellaneous Particulars.

2886 *Batàtas* Most of the tuberous-rooted species under the genus *Ipomœ'a* belong to this genus as, *I. paniculàta, tuberòsa, Jalàpa, bonariénsis*, &c.

2887. *Ruvea* To this genus belongs the *Ipomœ'a bòna-nóx*, No 2227. The species are showy. They may be trained upon rafters or trellis-work in a stove. A light soil suits them best, and cuttings root freely in the ordinary way

2888 *Mina*. This plant is cultivated by the Mexicans for purposes of decoration. The flowers are racemose, erect, and arranged in the scorpioid manner of Borage; at first they are crimson, but change through orange to pale yellow. It is a half-hardy annual, and only requires the treatment of purple convolvulus.

2889 *Calbòa* comes very close to *Mina*, and requires the treatment of the half-hardy woody species of *Ipomœ'a*

History, Use, Propagation, Culture,

2890. *Cyathòdes Oxýcedrus* is a small shrub with somewhat of the appearance of Red Cedar, and thrives with the same treatment as *E'pacris*.

2891. *Cystánthe* is a pretty little shrub with habit of *Sprengèlia*, and its culture is the same.

2892. *Alýxia* They are shrubs of easy culture, and are rather pretty when in blossom. They strike root readily in sand under a hand-glass.

2893. *Aganósma.* The species of this genus are very pretty, and the flowers are very fragrant and in large cymes. The treatment recommended for *Echites* will suit them.

18506 Hairy, Lvs bipinnatifid with linear acute lobes, Flowers in close heads greyish blue
18507 Lvs soft pinnatifid with terete linear acute lobes, Flowers in close heads white

[cylindrical, Stamens exserted
18508 White from dense wool, Lvs pinnatifid linear pungent, Heads on short peduncles, Bracts short pungent, Calyx

[leafy spike, Calyx ciliated
18509 Erect, Branches downy, Lvs linear-lanceolate 3-nerved denticulated, Flws axillary nearly sessile disposed in a
18510 Erect, Branches tomentose, Lvs cordate smooth, Flws solitary pedicellate, Lobes of Calyx and Bracts awned, Corolla cylindrical

18511 Racemes 2-3-flowered recurved, Lvs oblong-linear mucronate whitened and striated beneath
18512 Flws axillary solitary unibracteate, Lvs oblong mucronate glaucous, Stem downy

18513 Lvs linear spreading with naked edges 3-5-nerved beneath, Nerves all simple

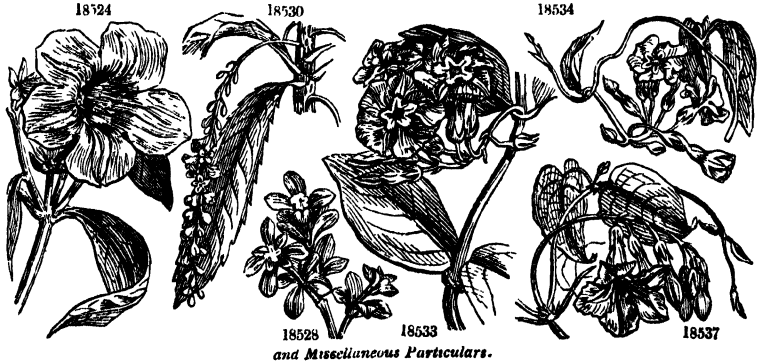
[oval depressed at top
18514 Spikes axillary and terminal 7-10-flwd aggregate, Lvs linear-lanceolate mutic, Branchlets glabrous, Drupes dry
18515 Spikes nearly terminal, Lvs elliptic spreading many-nerved crowded in whorls [convex above
18516 Spikes erect many-flowered a little shorter than lvs, Drupes ovate 5-celled, Lvs glabrous oblong-lanc. 3-5-nerved,
18517 Spikes nearly terminal aggregate nodding, Drupes 5-celled, Lvs oblong-lanceolate attenuated at apex disposed in interrupted whorls

18518 Branches annulated when naked

ζ Flowers double red
η Flowers large deep rose-coloured spotted, Segments of calyx leafy as long as the tube of corolla
18519 Lvs stiff coriaceous ovate-obt mucronate hairy ciliated, Petioles ciliated, Flws terminal solitary decandrous
18520 Young Lvs covered with rusty hairs old ones naked ovate, Flws 8-10-androus rising before lvs from rusty scales
18521 Lvs pilose oblong-obt mucronate, Flws solitary pentandrous, Sep. triangular villous, Segm. of Corolla acute
18522 Lvs ovate subcord. emarg mucr nitid, Ped. hispid glandular 1-flwd, Flws pentand, Sepals ovate glab, Seg. of
β Flws white spotted and very beautiful. The species has pink flowers also spotted [Cor subcordate
18523 Lvs roundish and oblong-obtuse, Umbels few-flwd bracteless, Pedicels and Ovaria ramentaceous, Flws subcampanulate pentandrous, Sepals linear-oblong fringed at apex

18524 Branches rather pilose, Lvs 3-4 in a whorl oblong-acum sess. glabr., Constricted part of Cor longer than tube
18525 Subscandent glab, Lvs obl.-ov. acum. on short petioles, Pan many-flwd, Cor large, tube slender, limb ample
18526 Erect glab, Lvs obl. on short petioles acum., Panicle many-flwd, Tube of Cor. partly constricted dilated at base angular, upper part elongated funnel-shaped

[less, Branches smooth
18527 Flws axillary and terminal solitary or twin, Lvs 4-5 in a whorl obovate veinless beneath shining, Stigma beard-
18528 Flws axill. and term, Lvs 4 in a whorl obov-oblong shining veiny beneath, Stigma bearded, Branches tomentose
18529 Flowers terminal, Lvs 3-4 in a whorl elliptic acute spiny-mucronate veiny, Stigma penciled
β Leaves narrow lanceolate mucronate



18530 Lvs long lanceolate acute spiny-toothed on short petioles, Racemes drooping, Berry usually 2-seeded

18531 Lvs elliptic-oblong acuminate downy, Corymbs erect, Tube of Cor a little longer than calyx, Follicles cohering

[obovate, Follicles hairy
18532 Lvs ovate or oblong auriculately cordate, Racemes lateral elongated many-flwd, Cor villous, Segments of limb
18533 Clothed with velvety down, Lvs ovate mucronate, Rac simple axill, Lbs of Calyx triang. hairy, Cor. glabrous
β Flowers smaller sulphur-coloured, with a red tube and rose-coloured eye
18534 Bran downy, Lvs ovate-obl. glab. above downy ben, Racemes axill a little hispid 10-12-flwd, Pedun downy
18535 Lvs roundish pointed covered with rusty down, Racemes 6-8-flowered, Segments of Corolla curled

18536 Hairy, Lvs elliptic acuminate, Cymes terminal, Segments of Corolla oblique ensiform, Nectary cup-shaped 5-toothed

18537 Lvs membranous cordate-oblong glabrous beneath, Stipules pectinate, Racemes secund axillary many-flwd

and Miscellaneous Particulars.

2894 *Mandevilla* This plant was first sent to this country under the name Chili jasmine; a name which has been given to it from its snowy white sweet-scented flowers, which from their large size and colour are beautiful to look upon The plant is well fitted for training up trellis-work or rafters in a conservatory or on a wall The young shoots should be trained to the utmost length, as it is always near the ends of the shoots where it blooms. The shoots should be cut back in the same manner as vines in winter, or other plants which bear their fruit or flowers upon the wood of the same year. It is readily increased by cuttings.

History, Use, Propagation, Culture,

2895 *Roupéllia* This is a handsome fragrant plant noticed by Atzelius (*Report*, 1794, p 113 No 7) as the Cream fruit, so called from the use formerly made of the cream-like juice of the fruit The flowers are large, white tinged with rose colour, the corona is red It is a pretty stove plant well suited to train on a trellis, pillar, or rafters, or to be grown in a pot and the plant supported by a wire trellis. Good fresh loam mixed with a little leaf mould suits it well It is a fast grower and requires water freely during summer, but care must be taken that the soil does not become stagnant It is readily increased by cuttings

2896 *Dipladénia* The species are either scandent or erect shrubs, with opposite entire leaves, and many bristles or glands in place of stipules. The genus differs principally from *Echites* in the number of nectareous glands The flowers are very showy, usually rose-coloured, pink, or purple. They thrive best in equal parts of light rich loam, heath mould, and very coarse sand They may be trained to rafters or wire trellis in a stove. They are readily increased by cuttings.

2897. *Rhynchospérmum* This is a pretty climbing shrub, with the habit of a simple-leaved species of Jasmine It is well fitted for training on rafters or trellis-work. It is of easy culture, and is readily propagated by cuttings

2898. *Parsónsia* The species are cultivated like other green-house climbers. A mixture of loam, sand, and peat suits them best

2899 *Lyónsia.* This is a pretty greenhouse climber, with sweet-scented flowers. It is well adapted for training on rafters. The same soil recommended for *Parsónsia* will suit it

2900. *Adènium Hónghel* is a curious plant It forms one or two fleshy stems like those of *Plumèria*, on the top of a club-shaped protuberant root or base of stem, and these stems divide again into dumpy branches, each bearing two or three leaves only It appears to be of very slow growth. Its flowers are very handsome and rose-coloured According to Alph. Decandolle this shrub is found in dry places in Wallo and Senegambia, where it is commonly called Honghel It requires a dry stove where it can be fully exposed to the sun. Being a plant of slow growth, it does not require much water at any time, and it should be kept almost dry after the leaves have fallen

420. *Cérbera Tánghin* is the Ordeal tree of Madagascar. When the late queen of Madagascar, in the beginning of 1830, came to the resolution of clearing her land from sorcerers, an ordeal was commanded in every town and village,

18538 Lvs smooth oblong-elliptic acuminate, Cymes terminal sessile 6 8-flowered, Bracts keeled

18539 Root tuberous, Stems annual, Leaves obovate rounded downy, Flowers 3 4 together terminal
18540 Glabrous erect, Leaves oblong-ovate taper-pointed, Racemes loose drooping 4-6-flowered
18541 Glabrous, Root round, Leaves ovate-oblong acute, Racemes terminal one-sided, Sepals very narrow
18542 Leaves elliptic acuminated undulated cordate downy beneath, Racemes axillary

18543 Glabrous, Stem and Branches swollen at the joints, Lvs lanceolate acuminate, Racemes axillary usually 6-flwd

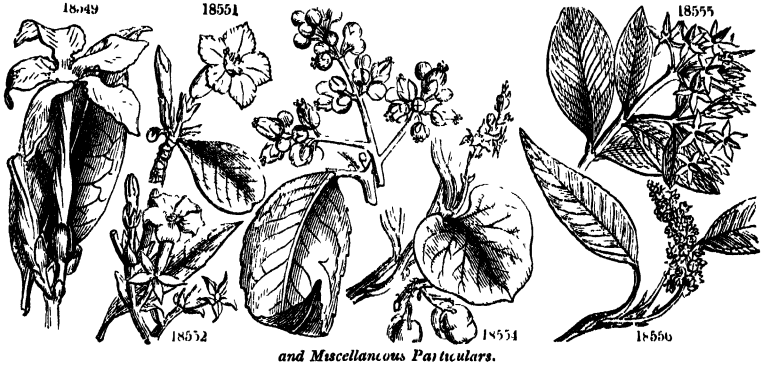
18544 Glabrous, Leaves ovate acute, Peduncles axillary 2-flowered, Sepals narrow, Lobes of Corolla triangular curled

18545 Rooting like ivy, Young Branches downy, Leaves oval deep green glabrous with minute scale-like glands in place of stipules, Flowers corymbose [Corolla urceolate
18546 Stem downy, Lvs downy wavy variable in form from linear to obovate, Flws in close one-sided naked panicles,
18547 Stem downy, Leaves shining from linear to obovate, Panicles short one-sided, Corolla campanulate

18548 Leaves opposite, Cymes terminal trichotomous, Limbs of Corolla bearded differs from *Passónsia* in the fruit being a capsule

18549 Leaves oblong-elliptic abruptly acuminated Peduncles loosely 3-flowered, Corolla with a very long tube
18550 Leaves oblong obtuse coriaceous, Cymes elongated dichotomous, Calycine Segments obtuse, Segments of Corolla oblong falcate

18551 Leaves obovate-oblong glabrous obtuse mucronate, Bracts narrow, Pedicels villous, Calyx downy, Lobes of Corolla obovate



18552 Leaves elliptic lanceolate approximate coriaceous shining, Corymbs terminal panicled

18553 Leaves serrulated, Panicle terminal, Flowers sweet-scented

18554 Fleshy, Lvs alternate entire, Flws pedicellate in single or branched spikes, Spikes few-flowered, Bracts remote

18555 Glabrous, Leaves obovate acuminate coarsely crenated, Corymbs lateral leafy from large bracts, Segments of Corolla linear, Anthers combined winged and tailed

18556 Leaves membranaceous, Petioles tumid at base and articulated with the stem, Flowers spicate

and Miscellaneous Particulars.

and at Tannanarivoo scarcely any class of inhabitants escaped. On the 9th of May, 1830, in compliance with the sovereign's mandate, a notable administration of the Tanghin took place The accused persons amounted to about thirty, including some of the highest All the nobility recovered, while the unknown plebeians, who, according to the common jugglery had been compelled with them, died The former made the usual triumphant entry into town, on the 17th, borne in open palanquins, amongst the shouting, dancing, and grimaces of the many thousands of people In the following month, April, about an equal number of Malagassy ladies submitted to the same ordeal, but all survived, and, in due course, made a grand entry into town The Tanghin is administered in private as well as in public. A subject so deeply rooted in the minds of all the Malagassy people, from the sovereign down to the slave, is the belief in witchcraft; and so blindly are they led by this belief that the whole nation may be considered as under a spell as powerful as the fascination which they attribute to the unfortunate sorcerers themselves The fruit of the Tanghin is the part used, and is administered by means of some liquid, as broth.

2901 *Tacepidia insignis* is a fine tree with very fragrant blossoms. It grows in any light soil, and is readily propagated by cuttings in the usual way.

2902 *Ulucus*. The tubers of this plant are eaten in Peru. In the time of the potato panic the roots were introduced as a substitute for it, but it proved an entire failure, as the roots are worthless, and not suited to the English palate It is called Ulluco and Melloco in Peru The plant is cultivated for its roots throughout the elevated regions of the Andes of Peru and Bolivia under the name of *Oca-quina*. The tubers are chiefly used by the Indians in the preparation of *Chuna*, by alternately freezing and steeping them, by which they are changed into an amylaceous substance It is a succulent herbaceous plant, growing luxuriantly in the open air during the summer and autumn Being easily affected by frost, it is necessary to take up the tubers about the end of October, and keep in store till April, when they should be planted in the open air. The plant throws out thread-like branches, which run over the stems, or on the ground, and enter the soil, and there develope new tubers. The largest tubers grown are about the size of a hazel nut, of a rich yellowish colour, and firm waxy texture.

2903 *Labisia*. This curious stove plant requires to be grown in a humid atmosphere, where it may have a gentle bottom heat. In winter little water is required for weeks, if the soil is kept moist it will be all that is required.

History, Use, Propagation, Culture,

2904. *Corynecárpus* is a fine tree, with laurel-like leaves. It only requires the culture of an ordinary greenhouse plant, and readily increases by cuttings.

2905. *Fagræ'a* The species of this genus are beautiful trees. They flourish in a moist stove, and succeed best with bottom heat.

2906. *Habrothámnus.* The species of this genus are said by Hartweg to be the gayest productions of the Mexican flora. The genus is hardly distinct from *Céstrum*, but, as the plants are common in the gardens under the name of *Habrothámnus*, we have retained the name. The species do well with the treatment of *Pelargónium*

2907. *Isochròma tubulòsa* is a handsome half-hardy deciduous shrub. It grows freely in rich soil in the open air during summer, but it should have an abundant supply of water; and it should be taken up about the end of

18557 Leaves alternate obovate-wedge-shaped subemarginate quite entire glabrous, Panicle large terminal sessile

18558 Arboreous, Branches bluntly tetragonal, Leaves elliptic or obovate, Panicle cymose 3—6 flowered, Tube of Corolla obovate

18559 Leaves obovate-elliptic glabrous, Calyx bilabiate, Tube with 5 angular wings, Corolla with a 5-ribbed tube widening upwards and contracted at the mouth, Lobes curled

18560 Clothed with stellate down, Filaments toothless, Leaves ovate-lanceolate nearly naked above, Spikes simple axillary pedunculate, Bracts narrow [ciduous, Limb of Corolla reflexed, Berries white

18561 Glabrous, Filaments furnished with a tooth, Leaves oval undulated, Flws sessile spicate panicled, Bracts de-

18562 Glabr, Lvs oval pale beneath, Flws disposed in thyrsd tastig term. corymbs, Bracts persistent [Brcts foliac.

18563 Lvs oval obl.-lanc scabr. above rather tom beneath, Lvs of buds emulating seps, Flws sess. in crowded spks,

18564 Filaments denticulate, Lvs alternate ovate undulated coriaceous shining, Racemes nearly sessile

18565 Downy, Lvs ovate entire, Flws terminal cymosely capitate involucrated, Corolla urceolate with ciliated segs

18566 Glabrous, Lvs ovate-lanceolate entire, Corymbs terminal forming as it were a dense leafy panicle, Segments of Corolla lanceolate

18567 Branches and under side of lvs downy, Lvs ovate-lanceolate, Cymes terminal, Segments of Corolla ciliated [sessile fascicled, Bracts involucrate

18568 Branches flexuous downy, Lvs ovate lanceolate downy above and tomentose beneath, Flws terminal axillary

18569 Young branches villous, Leaves oblong bluntish downy, Peduncles terminal and axillary 3—6-flowered, Flowers sessile capitate involucrate, Calyx tubular

18570 Leaves ovate 3 or 4 times shorter than the corolla, Corolla tubular with 5 short teeth

18571 Leaves ovate-acute undulated generally sinuated, upper ones twin, Peduncles 2-flowered, Flowers drooping

[Flws drooping

18572 Branches tomentose, Lvs lanceolate acum downy above and tomentose beneath, Umbels short many-flowered,

18573 Glabrous, Leaves oblong acum. obovate obtuse, Pedicels aggregate axillary and terminal 1-flowered, Flowers drooping

[Corolla circular 10-toothed

18574 Prostrate stoloniferous downy greyish, Lvs subinterruptedly pinnate, Leaflets roundish obovate, Calyx 5-cleft,

18575 Erect stolonif dk grn glabr, Lvs auricul pin 2—3 pairs, Lflts rnd cord fleshy, Cal cup-shpd 5-tthd, Cor 5-

18576 Stems procumbent angular fleshy fragile, Lvs downy pinnatifid 5—7 lobed, Lobes and sinuses obtuse [parted

18577 Scandent, Lvs petiolate ovate-acute downy beneath, Racemes panicled loose

[equal

18578 Lvs oblong-linear obtuse concave glabrous repand, Panicle cymose many-flowered, Calyx 5-toothed, Anthers

18579 Branches terete glabrous, Lvs subcordate ovate or ovate-lanceolate bluntish glabrous, Corymbs few-flwd glabr.

18580 Branches terete green, Lvs lanceolate glabrous tapering to both ends, Racemes short lateral

18581 Stem climbing, Lvs narrow oblong-lanceolate glabrous bluntish, Racemes corymbose loose [lvs, Cal unarm

18582 Very vil. prickly, Lvs obl cord sinuatly-anglr hoary bnth, prickly on veins, Racs sess woolly distich borne under

18583 Mny-stmd, Stms twiggy smth sarment, Lvs mostly cord ov smtms 2-3-4-5-cleft or prtd glabr. Racs pan dichot

18584 Glabr varnished, Stms very prickly, Lvs pinnatif. cil., Pets and ribs prickly, Umbels infra-ax. nutant, Anth equal

18585 Unarm, Lvs ent ov-lanc. subcord dwny, Pan term, Calyx 5-cren, Segs of Cor. uncin. at top, Anths unequal

18586 Stm wlly prkly, prick crwdd subul acic, Lvs ov.ang.-lbd hry prkly, Cal prkly, Racs simp few-fl., Cor. campan

18587 Prostr slndr prickly, Lvs twin or tern uneql dwny obl sin, upr cord, Flws quadrif tetrandrous, Anth equal

18588 Arboreous, Stem prickly, Brns woolly, Lvs large broadly-ovate angularly lobed nearly sessile woolly prickly beneath, Racemes much shorter than the leaves, Pedicels and Calyxes prickly

18589 Fruit conical acute bright yellow waxy hence the name, Leaves ovate-acuminate, Peduncles recurved

18590 Leaves lanceolate glabrous, Petioles short, Pedicels terminal and axillary, Teeth of Calyx subulate

and Miscellaneous Particulars.

September, and placed where it will be secure from the frost during winter. About the middle of the following March it should be cut back rather freely. It is readily increased by cuttings.

2908, *Heudelotia* is a pretty little shrub of easy culture

2909 *Chænostes*. Beautiful half hardy shrubs, which will grow and flower freely if planted against a wall in summer, but require protection from frost in winter They are readily increased by cuttings The flowers are very showy

451 *Solanum demissum* and *S cardiophyllum* are Mexican kinds of potatoes. The first grows at an elevation of 10,000 or 11,000 feet above the sea level, the other at 8,000 to 9,000 feet. The tubers of the first are kidney-shaped, white, with transparent flesh, the second has roundish waxy tubers.

History, Use, Propagation, Culture,

2910 *Rogiè'ra* is a genus of pretty shrubs nearly allied to *Rondelètia*, they grow freely in a mixture of loam and leaf mould, and are readily increased by cuttings

2911. *Péntas P cárnea* is a very handsome and showy plant; it grows freely in a moist heat in a mixture of leaf mould, sand, and loam, and is readily increased by division and cuttings in the ordinary way.

2912. *Hindsia* The species are among the finest things obtained from Brazil. They only require the treatment of other stove plants.

2913. *Higginsia mexicàna.* This plant was raised in the Berlin Garden from seeds that sprang up in the earth in which Mexican plants had been imported For the summer it does very well in the open air, but it must be placed in a green-house in winter. The flowers are in axillary cymes.

[fastigiate, Branches 3-flowered
18591 Lvs ovate-lanceolate tapering strigose beneath and bearded in the axils of the veins, Panicle terminal leafy

18592 Lvs ovate covered with scurfy down, Stamens inserted near the orifice of the tube, Style short
[Corolla roundish with silky disks
18593 Branches and younger leaves silky villous, Lvs ovate subcordate smooth above and downy beneath, Lobes of
[flexed, Cymes terminal corymbose many-flowered
18594 Hairy, Lvs nearly sessile ovate-lanceolate acuminate cordate at base coriaceous, Stipules ovate-lanceolate re-

18595 Hairy, Lvs oblong nearly sessile, Stipules large ovate, Cymes short compact terminal, Lobes of Calyx obtuse

[elongated
18596 Lvs ovate or oval-oblong acute rather pilose, Tube of Corolla much longer than the Calyx, Branches of style
[middle
18597 Downy, Stipules ovate, Lvs broad-ovate, Calycine Segments very unequal, larger ones foliaceous above the
18598 Lvs ovate-lanceolate strigose beneath bearded in the axils of the veins, Panicle leafy, Branches 3-flowered

[recurved, Berries scarlet
18599 Branches tereto purple, Lvs obovate-acute nearly glabrous, Peduncles axillary 3-8-flowered, Limb of Corolla

[nearly sessile
18600 Lvs approximate at tops of the branches oblong-lanceolate entire, Corymbs terminal few-flowered, Flowers

[bipartite
18601 Lvs broad-obovate-elliptic nearly sessile, Flowers axillary, Lobes of Calyx lanceolate, Stamens enclosed, Stigma

β Flowers white. A pretty plant well adapted for bedding out in masses
18602 Lvs long-lanceolate serrated, Flowers numerous flatly campanulate, Segments ovate acuto
18603 Stem and lvs rather pilose, Lvs doubly serrated, lower ones cord upper ones sessile, Flws racemose, Cal. glabr
18604 Stem branched downy, Lvs scattered ovate-lanc toothed, Pedunc elongated terminal and axill., Lobes of Cal.
β Lvs less toothed [large foliaceous repandly toothed, Flower subnutant
18605 Suffruticose leafy at top, Lvs long-lanc toothed, Flowers racemosely panicled drooping on peduncles
18606 Pil , Stem brnchd, Lvs coarsely biser , rad petı cord -ov , caul sess lanc , Rac pend , Segs of Cal cil append ov
18607 Stems ascending diffuse, Radical Lvs petiolate roundish cord crenately lobed, cauline leaves smaller ovate, Flws
β Plant hispid, and as if it was covered with wool [panicled, Lobes of Cal linear-lanceolate
18608 Plant beset with short stiff hairs, Stem erect few-flowered, Radical Lvs obl -obov , cauline ones linear, Flowers terminal erect, Corolla downy
18609 Stem branched many-flowered scabrous on the angles, Lvs crenulated, lower ones ovate reniform, upper ones ovate stem-clasping

18610 Lvs serrated, radical ones petiolate rounded, cauline ones sessile ovate-lanceol , Flws racemose, Segments of Calyx triangular toothed, Style length of corolla
18611 Radical leaves petiolate ovate-cordate toothed, cauline ones sessile linear-lanceol., Flws few racemose, Segments of Calyx lanceolate entire, Style length of corolla

18612 Glabrous glaucescent, Lvs ovate-lanceolate serrated, Stigmas 5, Capsule 5-celled

β Flowers white semidouble
18613 Glabrous glaucescent erect, Lvs ovate finely serrated, Flowers racemose, Stigmas 5, Capsule hemispherical

18614 Plant slender branched, Lvs narrow toothed

18615 Downy, Stems ascending, Lvs cordate-ovate, Calycine Segments oblong obtuse reflexed quite entire

18616 Leaves sessile lanceolate denticulated ciliated rather pilose, Flowers racemose, Bracts ciliated

and Miscellaneous Particulars.

2914 *Lindènia rivàlis* is a plant nearly related to *Augùsta* or *Portlàndia* in the nature of the fruit, and *Tocoyena* in the form of the flower It forms a beautiful shrub, with flowers like those of *Oxyánthus*.

2915. *Adenóphora*. All the species are elegant border flowers, and are therefore worth cultivating in every garden They will grow in ordinary soil, and are increased by seeds or dividing at the root.

2916 *Platycòdon* These plants are neat when in blossom. They thrive best in pots in a mixture of sand, loam, and peat, and placed among alpine plants They will also thrive in a peat border.

2917. *Glossocòmia ovàta* is a hardy perennial with spindle-shaped roots, and is inclined to twine It grows well in common garden earth. It is readily increased from seeds treated like those of *Campánula carpática*.

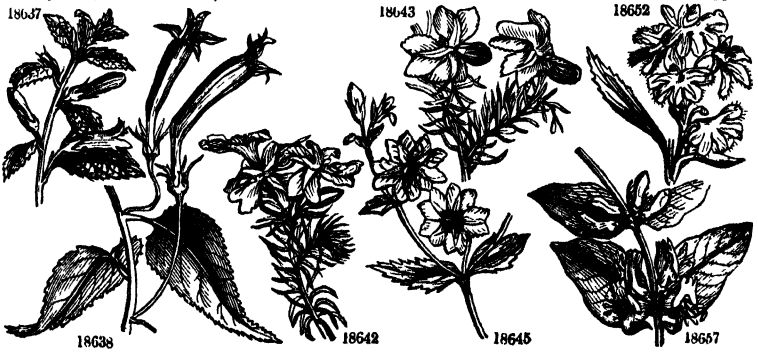
History, Use, Propagation, Culture,

2918. *Isótoma.* **The species are very pretty while in blossom, and are of easy culture. A light soil suits them best, and they answer if planted out during summer in the open border.**

18617 Lvs obl -lanc acum. wrinkled glabr above clothed with hoary toment. beneath, Flws axillary on long pedunc.
18618 Stem erect brnchd at base, Lvs ov.-obl. rather hisp. obsoltly and glandly tthd cil. sess., Spk elong. term. leafy
18619 Lvs lanc glandly serrul. rather fleshy glabr., Fl. on short peds racem , Cal. Segs tthd. Stem erect bran. downy
18620 Lvs narrow lanc. finely serrated, Flws axillary almost hid by the green bracts, lateral and dorsal petals smooth
18621 Lvs deeply lobed cordate lying flat on the ground and erect, Flowers panicled small
18622 Downy, Stem simple flexuous, Leaves sessile oblong lanc denticulated pale green, Flws racem , Peds twisted
18623 Branched dwny, Lvs cordtly ov dwny abve and alng veins beneath doubly serr , upper lvs lanc , Racem. elon
18624 Lvs rndsh repd wrnkld glabr., Peduncs lngr than lvs, Cal Segs ent. gland at base, Stems spotted prostr rootg
[eolate entire, Middle Segment of lower lip of Corolla obcordate
18625 Glabrous, Stems ang. simple, Racemes secund Lvs thickish, lower ones dentately pinnatifid, upper ones lan-
18626 Lvs sessile scabrous decurrent, Peduncles long hairy, Flowers axillary solitary disposed in a long leafy raceme

18627 Rather downy, Lvs sessile pinnatifid toothed, Peduncles axillary naked elongated 1-flowered, Corolla salver-shaped, tube entire
18628 Stems almost simple, Lvs linear quite entire, Peduncles scape-formed 1-flowered, Cor lla funnel-shaped, tube cleft

18629 Lvs broad heart-shaped acuminate pale green shining glabrous repand toothed, Flowers axillary
18630 Lvs oblong-lanceolate remotely denticulated glabrous, Flowers axillary, Corolla glabrous

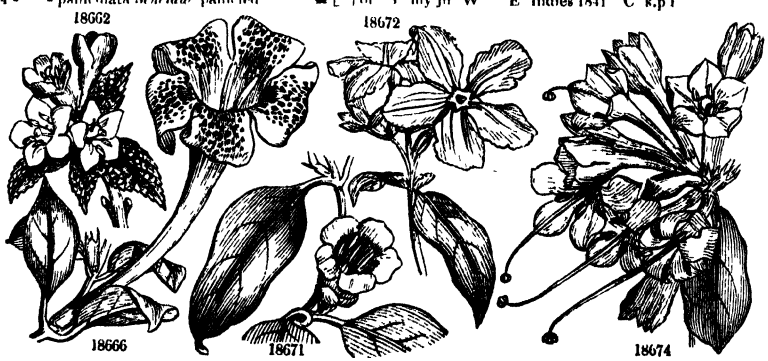


18631 Suffruticose, Stem erect simple thick hoary, Leaves dense only at top of stem reflexed lanceolate hoary beneath serrated, Pedicels axillary, Corolla bilabiate
[acuminated, 2 lower Anthers bearded, Pedicels axillary
18632 Subscandent smoothish, Leaves acuminated membraneous sharply too hed a little cordate, Lobes of Corolla
18633 Lvs ov dentic glabr above fusc. toment beneath, Peds corymb , Calyx and Cor. leafy, 2 lower Anths bearded
18634 Shrubby glabr., Lvs ov. ac. doubly serrd, Peds axill , Cal Segm lanc serr., Cor contracted a little at mouth
18635 Lvs ov ac gland serr glabr., Flws umb term leafy , Cor downy much contrcd at mth, 2 lower Anth bearded
18636 Pubesc , Stem ang , Lvs on long stalks co d. dbly serr , teeth termd by black gland, Peds ax , Lbs of Cal gland. ser.
18637 Erect suffrut , Lvs on short stalks obl ov serr nitid above, Peds axill., Cal Segs subul serr , Lmb of Cor yel
18638 Shrubby glabr., Lvs cordtly triang dbly serr., Peds axill. solit , Cal Segs narrow serrul , Anths bearded in frnt
18639 Downy, Lvs obl. ov little heart-shpd with callous teeth, Lobes of Calyx hooked backwds, Tube of Cor slendr
18640 Scandent, Lvs oblong obtuse entire glabrous with revolute edges, Racemes terminal, Flowers reflexed, Calycine Segments slightly denticulated
18641 Lvs obl. lanc bright green with glandular serratures downy and silky above, Racemes 1-sided, Branches downy
[bottom, Segment cuneate spreading 2 lobed
18642 Branched, Lvs filiform compressed apiculate, Corymbs 3—5-flowered, Corolla having the tube hairy inside at
18643 Brnchd, Lvs scattered filif , Flws terminal, Cor large with 3 broad sprdng bifid segs and 2 smaller entire ones
18644 Branched, Leaves linear obtuse, Corymbs few-flowered, Segments of Corolla cuneated deeply 2-lobed with a mucrone between them

18645 Stem erect thick branched, Lvs opposite petiolate oblong toothed, Flowers loosely and dichotomously panicled
[dunculate, Corolla hairy outside
18646 Erect downy, Lvs toothed obovate cuneated, upper ones elliptic lanceolate ad lt ones smoothish, Spikes pe-
18647 Erect downy, Lvs lin few-toothed, lower ones cuneated, adult ones smoothish, Spikes pedun , Cor hairy outside
18648 Erect, Brans compr tetrag., Lvs cun tthd a lit , up lvs crowded, adult ones glab , Ped in fasc few-flwd, Cor hairy
18649 Erect, Stm simp wngd, Lvs obov ent nar. at base, Ped filif glab few-flwd, Cor with black beard, villi plumose
18650 Branches terete, Lvs linear or oblong-lanceolate a little toothed hoary beneath with revolute edges, Peduncles terminal and axillary woolly, Corolla with a greyish beard villi plumose

18651 Stem procumbent, Leaves lanceolate a little denticulated rather pilose villous at the axils, upper ones linear, Calyx 5-leaved pilose, Corolla gibbous at base

18652 Erect pilose, Lvs lanceolate toothed, Bracts entire, Cor hairy inside, margins naked above, Styles very villous
18653 Glab , Stem panicled, Lvs ovate acute sharply serrated, Spikes elong many flwd, Bracts narrow ent , Styles vill.
18654 Stem erect pan ang glab., Lvs lin. dentic coriac , upper lvs and bracts squarrose, Spikes capitate. Styles pilose
18655 Pilose, Lvs oblong apiculate a little serrulated half stem-clasping, Flowers axillary solitary, Corolla unilabiate, tube woolly inside, Style glabrous



β Flowers crimson
18656 Quite glabrous, Leaves evergreen oblong acute pale beneath, Peduncles nutant, Bracts linear-lanceolate
18657 Downy erect, Lvs ovate acute, Flws twin sess. axil., Lower Lobe of Cor. linear recurved trident., upper cord

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2920. ***Weigèla*** is one of the most beautiful shrubs which have been introduced into this country for years It is hardy and an early flowerer, it does well against a wall. It appears to be nothing but the *Calyphỳrum flòridum* of Bunge It also forms a pretty plant when grown in pots

2921. ***Rhodóstoma*** is a small bush with cymes of white flowers, which as they decay change to red The culture and propagation are the same as those recommended for *Posoqueria* or *Gardenia.*

2922. ***Sherbóurnia*** is a beautiful shrub when it flowers. It requires much heat and a moist atmosphere. In its natural habitat it grows in the low lands by the sides of rivulets, where it forms a close compact leafy bush, along with *Smeathmánnia pubéscens* Its culture is the same as for *Gardenia.*

2923 ***Heinsia jasminiflòra*** is a most graceful shrub in its native place. The flowers are numerous, about the size of those of *Vinca rósea.* Its culture is the same as for *Gardenia.* In its native place it grows on the mountains in great quantities along with *Smeathmánnia lævigàta*, and these two flowers form profuse sheets of white

497. ***Cephaëlis Ipecacuánha.*** Although the root of Ipecacuanha has been long employed as a valuable article of

18658 Glab , Lvs obl. ac. glauc. ben., Pedun 2-flwd axil., Cal 5-tthd cil. with glands, Tube of Cor. convex 2-coloured,
18659 Lvs narrow lanceolate ciliated, Peduncles pendulous 2 flwd shorter than lvs [Berries 2 connate black
18660 Branches tetragonal, Lvs ovate or oblong downy, Pedun 2-3-flwd, Bracts 4, 2 inner ones broad obcord , Cor gibbous at base
18661 Branches tetragonal. Leaves oval hairy, Peduncles 2-3-flowered, Bracts 4, 2 inner ones broad obcordate, Corollas gibbous at base
18662 Downy, Leaves oblong-acuminate sharply serrated glabrous above, Flowers sessile axillary and terminal, Corolla pubescent with roundish segments
18663 Leaves broad oblong-lanceolate coriaceous, Flowers 3-4 inches long pure white
13664 Leaves oval-lanceolate, Corolla party-coloured with linear segments
18665 Glabrous, Lvs ovate oblong undulated, Stipules small joined at base, Flowers terminal cymose, Bracts fleshy

β Flowers double white changing to buff colour , as large as a double camellia [wd throat and ov obt segm
18666 Glab , Lvs obl gland in axils of veins, Flws erect so it axill. mostly from forks of stems, Cor with long tube
18667 Lvs glab tern obov cusp , Flws term solit downy, Cor with cylnd tube, funnel-shpd limb and roundish segs
18668 Lvs wavy obl downy ben , Flws solit erect term , Cor with long tube campan limb and revolute emarg segm
18669 Lvs obovate oblong glabrous, Flws solitary terminal or in forks, Cor with elongated tube campanulate throat and roundish segments, Stigma large clapper-shaped
18670 Glab , Lvs opposite or tern oblong-lanceolate undulated, Flws terminal solitary, Calyx 6-parted, Cor. with a narrow tube and a 7-parted reflexed limb
18671 Lvs elliptic acuminate glabrous, Pedicels bracteate axillary solitary 1-flowered, Calyx and Cor. campanulate, Stigma capitate
18672 Lvs oval oblong, Flws 3—4 together pedicellate, Tube of Cor. clothed with yellow hairs and the limb hispid
18673 Glabrous, Teeth of Calyx bluntish, Racemes very short 3-flowered, Tube of Corolla longer than leaves
18674 Villous, Lvs obovate or oval villous, Flws subcapitate terminal, Tube of Corolla very long, Stigma clavate

[acuminate reflexed lobes
18675 Spinescent glabrous, Lvs oval sessile approximate, Flws terminal sessile solitary, Cor funnel-shaped with
18676 Unarmed glabrous, Lvs obovate oblong at tops of branches acuminate on short petioles a little downy beneath, Flowers terminal sessile, Tube very long, Segments of Calyx foliaceous spatulate, Stigma clavate
18677 Limb of Corolla with 5 didymous tubercles in the throat, Flowers larger and more fragrant than *I. gratissima*
18678 Branches pilose, Leaves ovate downy, Stipules bifid, Corymbs terminal trichotomous, Large Segment of Calyx white
18679 Stem ascending simple, Leaves obovate acute entire smoothish, Head of Flowers terminal solitary, Involucrum 4-leaved

[together from the base of the young shoots, Calyx 4-cleft
18680 Spinescent downy, Leaves ovate or oblong serrulated nearly glabrous above hairy beneath, Pedicels 2—3
18681 Thorny branched, Leaves shining when dry of a bright yellowish-brown beneath, Fascicles 2—6-flowered, Wood yellow
18682 Erect glabrous, Leaves roundish-ovate crenate coriaceous, Pedicels axillary short
18683 Erect glabrous, Leaves oblong-lanceolate with an emarginate point, Pedicels short axillary aggregate

[tops of branches
18684 Thorny, Leaves ovate-lanceolate serrated, Scales of Buds ciliated, Stipules small ciliated, Flowers punctid at

and Miscellaneous Particulars.

the Materia Medica, yet the botanical character of the plant which produced it remained unknown until Professor Brotero of Coimbra determined the genus to which it ought to be referred, with the assistance of observations made in Brazil on living plants by Bernardo Gomez, a resident medical botanist. The plant is a native of moist woods near Pernambuco, Bahia, Rio Janeiro, and other provinces of Brazil. It is called Ipecacuanha by the natives of some parts of Brazil, and *Poaia de Matto* by those of the southern provinces. The root is simple, or a little branched, irregularly bent, externally brown, wrinkled by rings It appears that a native of Brazil, whose name was Michel Tristan, was the first who brought Ipecacuanha into use He speaks of it as a remedy in dysentery. Piso afterwards describes it, and speaks of two sorts, the white and brown. Besides these, the name Ipecacuanha, which, in the language of South America, means Vomit-root, is given to various species of *Cynánchum*, *Asclèpias*, *Dorstenia*, *Euphórbia*, *Viola*, &c. The black, or striated, Ipecacuanha is *Psychótria emética*, the white Ipecacuanha is *Richardsònia scàbra*, and the common brown Ipecacuanha is *Cephaëlis Ipecacuánha*.

2924 *Càtha* is a plant of easy culture, only requiring the treatment of other hothouse shrubs

History, Use, Propagation, Culture,

2925. *Sóllya* All the species are beautiful and delicate shrubs, of easy culture, with delicate blue flowers

2926. *Prondya élegans* is an evergreen twining shrub from Swan River, with terminal clusters of pale lilac flowers It has the habit of *Sóllya*, to which it is nearly allied, but is inferior in beauty.

2927. *Marianthus.* A curious and interesting twining-plant, allied to *Sóllya*, of great beauty when in blossom.

2928. *Lemònia* is allied to the American monopetalous Rutaceous genera, of which the Angostura-bark tree may be taken as the type. It is a pretty shrub, and will grow well in a rich mixed soil, and cuttings will root readily in the ordinary way.

18685 Leaves elliptic sharply serrated, Branches leafy, Flowers usually solitary

18686 Leaves ovate fringed with long toothed serratures, Flowers tetrandrous subumbellate, Capsule 2—5 winged
18687 Climbing radicant, Leaves ovate-lanceolate serrated, Peduncles filiform several times dichotomous, Petals orbicular crenulate, Capsule prickly
β Leaves spotted with white or yellow
γ Leaves variegated with white or yellow

18688 Lvs oval serrated glabrous above and downy beneath, Flowers in thyrsoid panicles, Pedicels pilose in capitate
18689 Rather spiny, Leaves glossy deep green, Flowers clustered [corymbs
18690 Leaves ovate-oblong glandularly serrated shining downy beneath Panicles terminal raceme-formed
18691 Leaves narrow oblong obtuse downy beneath, Flowers in small roundish stalked heads [ends of small spurs
18692 Young brnchs dwny, Lvs small trunc. spiny-tooth shining pale and pitted ben., pits hairy, Flws clustered at
18693 Brnchs warted at the nodes, Lvs rndsh-cun glab entire or tooth vil beneath, Corymbs axil rather tubercled
18694 Brnchs covered with rusty hairs, Lvs obl rounded coarsely-toothed revolute edges with distinct stalk glands,
18695 Rather thorny, Leaves cuneate, Umbels small axillary [Flws in term. stalked roundish clusters or umbels
18696 Leaves quite entire.

[petals
18697 Leaves oval or elliptic smooth silky white beneath, Corymbs few-flowered terminal, Stems twiggy, Flower with
18698 Leaves small oval-oblong shining above downy beneath, Flowers corymbose, Flower with petals
18699 Leaves oval-lanceolate white from down beneath, Corymbs terminal crowded, Flower with petals
18700 Leaves ovate-lanceolate downy beneath, Panicle few-flowered, Flowers apetalous
18701 Leaves ovate-lanceolate serrated scabrous from starry down above and velvety beneath, Panicles few-flowered, Flowers apetalous

18702 Leaves lanceolate glabrous above but silky villous beneath, Flowers axillary solitary, Berries silky

18703 Glabrous, Leaves ovate-lanceolate, lower ones serrated, upper ones quite entire, Cymes many-flowered nutant

18704 Young branches villous, Leaves lanceolate entire, Panicle few-flowered, Berry spindle-shaped villous

18705 Glabrous, Leaves linear entire bluntish, Cymes many-flowered nutant, Stigma nearly simple, Fruit oblong

18706 Leaves narrow oblong-lanceolate pilose beneath, Corymbs terminal, Flower pale blue, Stem erect

18707 Downy, Lower Leaves spatulate dentate or pinnate, upper ones oblong, Peduncles solitary corymbose, 3 lower Petals paler and spotted with blue

18708 Leaves nearly opposite unequal-sided coriaceous ovate-oblong bicrenate, Panicles axillary simple dichotom., Calyx enclosed in a 2-leaved involucrum

18709 Leaves petiolate trifoliate smooth, Leaflets obovate, Peduncles axillary 2–3-flowered

18710 Leaves obovate crenated netted with green veins on a pale ground beneath, Peduncles axillary solitary 1-flowered, Corolla one inch long, Shrub of compact habit

18711 Leaves simple rarely bifoliate repand with appendages at the base of the petioles, Panicles terminal and lateral

18712 Leaves broad-lanceolate, Racemes compound, Peduncles glabrous, Petals obtuse

[duncles, Flowers in axils of two bract-formed leaves, Calyx red, Corolla white
18713 Leaves lanceolate entire glabrous, Branchlets axillary nearly leaflets bearing one or more long floriferous pe-

[many-seeded, Valves thick woody
18714 Leaves linear-lanceolate mucronate coriaceous glabrous, Peduncles solitary, Capsule ovoid compressed 2-valved
18715 Leaves oval or oblong obtuse cordate coriac glabrous 3—5 in a terminal whorl, Pedunc. solitary twin or ter-
18716 Leaves very narrow linear [minal downy, Capsule downy, Petals linear
18717 Lvs obl obov. glab., Peds thick nutant, Caps large bluntly triquet. 3-valved, Valves woody, Seeds brown shiny

and Miscellaneous Particulars.

2929 *Metrodòrea* A pretty shrub A good mixture of sandy loam and peat will answer it well, and it will be readily increased by cuttings in peat

2930 *Pentarhàphia* is a pretty little bush with scarlet flowers. It requires the treatment of ordinary stove shrubs.

2931. *Almeida rùbra* is a very handsome shrub with delicate rose-coloured flowers. A mixture of light loam and leaf mould suits it well. It is increased by cuttings in bottom heat.

2932 *Erythrochiton.* This genus is nearly allied to *Galipèa* that furnishes the Angostura bark. A mixture of light loam and leaf mould will suit it.

History, Use, Propagation, Culture,

2933. *Corethróstylis* is one of the most striking Swan River plants; but, owing to the difficulty of cultivating it, the specimens that have been produced in Europe are very inferior to the wild ones. The foliage is sweet-scented. Rough peat and silver sand is the best soil known for it. It requires a liberal supply of water in summer, and as much air as possible. In winter it should be treated the same as Cape heaths. It is propagated by cuttings in the usual way.

2934 *Guichenótia* is a very pretty shrub, and requires the same treatment as *Corethróstylis*.

18718 Leaves subverticillate obovate shining entire glaucous beneath, Umbels term. sessile few-flwd, Sepals ciliated
18719 Leaves lanceolate mucronate coriaceous glabrous, Peduncles solitary, Capsule glabrous 2-valved 2-seeded. Seed purple

18720 Leaves ovate-deltoid 3-nerved, Bracts 3 lanceol.-elliptic, Calycine segments glabrous inside, Ovarium 5-celled

[glabrous, Pets none
18721 Leaves small cordate 3-lobed with whitish hairs beneath, Stipules none, Racemes erect many-flowered, Style
18722 Hispid from stellate hairs, Leaves cordate subhastate sinuate obtuse, Stipules large petiolate cordate, a little 3-lobed, Racemes secund, Petals none [tose margins glabrous Flws very large
18723 Lvs cordate ovate obtuse entire or 3-lobed at length glabrous, Peds tomentose usually 2-flwd, Calyx tomet-
18724 Lvs cord hast. 3-lbd pil. above stel tom ben, Stips none, Racs erect mny-fld glut, Pets none, Style pil at base
18725 Leaves cordate lanceolate subhastate pilose stellately hispid beneath, Stipules foliaceous semicordate, Racemes flexuose many-flowered hispid, Petals none, Style glabrous

18726 Beset with stellate hairs, Leaves cordate entire, Flowers cymosely racemose opposite the leaves, Bracts leafy coloured

18727 Peduncles elongated 2—3-flowered, Bracts 2—3 linear alternate remote from the flower, Capsule glabrous

18728 Branches and Calyx glandularly downy, Leaves obovate elliptic serrate, Panicles terminal
18729 Glabr. erect, Lvs oblong obtuse serrulated above mid full of resinous dots, Pan. terminal Pet spatulate

[Spur short incurved, Dorsal Sepal emarginate
18730 Erect, Leaves verticillate lanceolate acuminate serrate glandular at base, Peduncles terminal many-flowered,
18731 Erect, Lvs alternate ovate-lanc serrate with glandular petioles, Flws terminal umbellate, Spur clavate inflexed
18732 Erect branched, Lvs whorled lanc glandularly serrate, Stip. glandular, Ped axil 3-flwd, Spur short reflexed
18733 Erect, Lvs lin-lanc. serrate, Ped 1-flwd aggregate axil, Dorsal Sep. mucronate, Spur short ventricose incurved
18734 Glabrous, Root tuberous, Lvs whorled oblong-lanceolate serrate, Ped 1-flwd, Spur filiform falcate, Fruit smooth
18735 Er simp, Lvs large alt ov-acum mucr. ser. pil gland fring, Ped 1-flwd aggr., Spur short incurv. infl. didym
18736 Erect radicant at base, Lvs altern ovate scabr fimbriolate at base, Ped axil aggregate, Spur short obt. curved
18737 Pilose erect, Lvs alternate lanc, Rac axillary, Dorsal Sepals subbilobed cuspidate, Spur acuminate incurved
18738 Erect, Lvs opposite sessile lanceolate setaceously serrated, Ped axillary solitary or twin, Spur long filiform

18739 Erect, Lvs alternate ovate setaceously serrated glaucous beneath, Peduncles 2-3 axillary 1-flwd, Spur filiform
18740 Succulent bran creeping, Lvs altern renniformly cord slightly ser, Ped axil solit. 1-flwd, Spur short incurved
18741 Leaves ovate serrate wrinkled, Spur straight, Peduncles 3-6-flowered, Flower small
18742 Lvs roundish cordate entire, Spur longer than the pedicel, Scapes radical bearing a raceme of long-stalked flws

18743 Pilose, Leaves radical numerous cordate-ovate, Stipules linear lanceolate fringed, Peduncles radical pilose, Spur short blunt, Petals bearded with clavate hairs inside

18744 Leaves tapering to the base obovate spatulate obtuse crenately serrate, Peduncles axillary, Lip hairy with two elevated glandular lines

18745 Pilose, Leaves obovate, Flowers glabrous axillary on the lateral branches, Tube of Calyx cylindrical
18746 Leaves linear remote smooth, Heads of Flowers terminal, Bracts silky toothed, Style pilose

18747 Hispid, Spines by threes straight, Leaves cordate 5-lobed deeply serrate downy beneath, Peduncles nutant 1—3-flowered, Sepals reflexed, Fruit hispid

18748 Erect, Branches unarmed, Leaves quite entire oval or oblong-linear fleshy convex beneath powdery, Spikes branched

18749 Strigose, Stem branched, Lvs lanceolate, Peduncles elongated, Heads globose smooth, Involucrum many-lvd, Segments of stamineous tube bicuspidate

[Sepals white
18750 Lvs lingulate oblong clothed with powdery down beneath, Rachis flexuous, Spathes 6-7 many-flowered lanceolate,

and Miscellaneous Particulars.

2935 *Schweiggèria* is a pretty shrubby violet with white flowers. It will grow well in a compost of sand, loam, and peat, and cuttings of young wood will strike root in sand The plant requires plenty of water while growing, and should be placed in an airy situation in the hothouse

2936 *Cryptandra* is a genus of neat little greenhouse shrubs, requiring about the same treatment as Cape heaths. They should be potted in a soil composed of sandy peat and a small portion of loam, with plenty of drainage They are increased by cuttings of the young shoots, like Cape heaths.

History, Use, Propagation, Culture,

18751 *Sarcostémma campanulàta* is a pretty little greenhouse climber, well adapted for training over ornamental wirework, like most of the Asclepiadeous plants. It requires a rich loamy soil, and plenty of moisture during the growing season When it has done flowering, water should be gradually withheld. The plants should then be cut back and repotted.

2937. *Schubértia gravèolens* When *Stephanòtis floribúnda* made its appearance it was generally considered, and justly, the finest twining plant in cultivation. The present plant is not inferior to it under good culture. The flowers are rather larger and quite as fragrant It is of easy culture.

2938. *Trichosachme* is a curious woolly climbing shrub, with small flowers having long purple tails, which are analogous to those in *Strophánthus*. Its culture is the same as that of other hothouse climbers.

2939. *Cyrtóceras* is very close to *Hoya* in habit. It is a beautiful hothouse climber. It requires the treatment of *Hoya*.

DIGYNIA.

18751 Downy, Lvs ovate-oblong acuminate cordate tomentose beneath, Peduncles many-flwd, Corollas campanulate

18752 Villous, Lvs cordate obovate downy shining above, Umbels 6-7-flowered pilose, Segments of limb ovate

[Lflt of corona ovate pointed

18753 Stem simple, Lvs oblong tomentose beneath, Peduncles short tomentose, Umbels many-flwd, Fl. tomentose,
18754 Stem branched, Lvs broad elliptic subcord. coriaceous glabr., Pedunc thick, Pedicels and Flws hairy, Umbels dense many-flwd, Cucull fleshy truncate

18755 Woolly all over, Lvs ovate, Flowers small dark purple, with long fleshy purple tails

[Corolla subrotate, Throat naked

18756 Lvs oblong-lanceolate acum. smooth above and hoary beneath, Peduncles twice as long as lvs,, Cymes crowded,
18757 Glabrous, Lvs broad elliptic spotted cordate, Umbels dense nearly sessile, Calyx and Corolla ciliated, Lflts of stam corona ovate confluent with the anthers

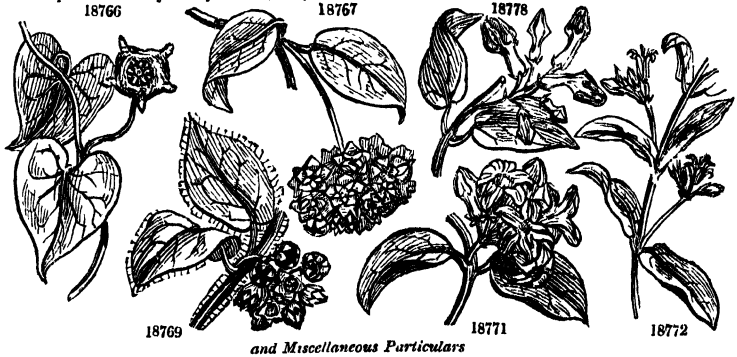
18758 Glabrous, Lvs fleshy narrow oval 3-nerved, Lvs of corona acute, Peduncles thick, Flowers umbellate
18759 Glab, Lvs coriaceous ovate 5-nerved, Umbels compact many-flwd on short peduncs, Lflt of corona ovate acute
18760 Glab radicant, Lvs fleshy ovate 5-nerved, Umbels round compact on short peduncs, Lflt of corona ovate acute
18761 Suffruticose diffuse, Lvs small ovate 1-nrvd pale beneath, Umbels lat on short ped, Lflt of corona concave ac.
18762 Downy, Lvs obovate-lanceolate coriaceous, Peduncles pendulous, Umbels many-flwd, Flws large, Lflt of co-
18763 Glabrous, Lvs oblong ovate acuminated, Umbel dense [rona white 2-lobed
18764 Glabrous, Lvs ovate-lanceolate acuminate fleshy veiny, Umbel hemispheric compact
18765 Glabr, Lvs obl. coriaceous, Umbels many-flwd on longish peduncles, Cor. broad campanulate 5-lobed, Lobes short obtuse

18766 Downy, Lvs opposite cordate acuminate, Petioles long red, Peduncles axillary 1-flowered large stellate

18767 Glab., Lvs coriaceous ellip. rounded at the base, Umbels on long peduncs many-flwd, Lflts of corona concave

18768 Glabrous, Lvs large cordate, Flws corymbose, Corona exserted

[inside at base



18769 Lvs cordate-ovate acute, Stem petioles and nerves of lvs hispid, Flws umbellate, Corolla coriaceous tubercled
18770 Hairy, Lvs oblong cordate, Umbels many-flowered on long peduncles, Lobes of corona fleshy and rounded

18771 Lvs elliptic retuse, Flws numerous umbellate, Corona shorter than the membranes of anthers, Sepals ovate shorter than the tube of corolla

18772 Stem simple downy, Lvs oblong cordate tomentose, Peduncles corymbosely panicled many-flowered, Lflts of corona bifid

[apex glabrous

18773 Glabrous, Root tuberous, Lvs ovate-lanceolate fleshy, Segments of limb downy, Lobes of corona united to
18774 Glabr, Root tuberous, Lvs lin fleshy, Seg of limb lin, Exterior lobes of corona emarginate, Pedun. umbel axil
18775 Downy, Lvs ovate, Peduncles 4—6-flowered, Segments of limb conniving hairy inside, Lobes of corona emarg.
18776 Glabrous, Lvs oblong-lanceolate, Peduncles 1—6-flwd, Segments of limb ligulate ciliated, Lobes of corona ligulate
18777 Lvs cord-ov rather hry cili gland at base, Ped 4-6-flwd, Seg of Cor. cili, Out lbs of corona emar, in ones ent.
18778 Glab, Lvs ov subcord, Pedun axil my-flwd, Cor clav segs coher, Out lvs of corona short bifd, in lig clav
18779 Brnchs prostrate fleshy nearly leafless, rough from tubercles, Lvs very minute ternate cord, Flws axil. sessile

and Miscellaneous Particulars

2940. *Dictyanthus* A woody climber of great beauty when in blossom The corolla is large, urceolate be ow, and green, its limb turned back and prolonged into five long horns with recurved margins. this part is whitish marked with numerous small lines or striæ of purple. The plant will grow in the open air in summer, and in a warm house in winter. It requires the same treatment as other woody tender climbing Asclepiadeous plants.

2941. *Raphistémma pulchéllum*, as a climber, is nearly equal to *Stephanótis floribúnda*.

2942. *Stephanótis floribúnda* is a graceful climbing shrub; and when trained upon a wire globe trellis, with the mass of dark foliage and the countless clusters of large white flowers, is most attractive. It is a plant of easy culture, and is easily propagated by cuttings in the usual way.

2943. *Oxypétalum* is a genus of pretty hothouse climbers with showy blue or purple flowers. *O. solanoides* may be treated in the same manner as recommended for *Stephanótis*.

History, Use, Propagation, Culture,

2944. *Wigándia.* The species are straggling plants, with blue flowers, beset with stinging hairs; they are of easy culture, and cuttings will root readily The genus comes near to *Hydrólea*

2945. *Xanthósia rotundifólia* is one of the prettiest greenhouse plants It grows best in rough peat, sand, and a little loam. It will grow from cuttings or best from seed.

2946 *Astrótriche.* Grows well with the same treatment as *Xanthósia.*

2947. *Nárthex asafœ'tida* Dr. Falconer says that he has compared his materials with Kæmpfer's description and figures, and with the original specimens of that author in the collection in the British Museum, and found them to agree, as far as comparison could be instituted, in every essential particular Jubbar Khan, the Dardoh rajah of the country in which Dr. Falconer gathered his specimens, at once recognised it as that which furnishes the *Heeng* or Asafœtida of commerce, and referred to the medicinal accounts given of it by the Persian and Arabian authors, but the Dardohs are a wild race, and do not collect the gum resin for exportation. Some young shoots were carefully removed and introduced to the Botanic Garden at Saharumpoor, but afterwards transferred to the subsidiary hill garden at Mussooree. Of these some have succeeded well, but had not flowered up to the time of Dr Falconer leaving India; and one of these furnished the leaves which are represented in the figure in the Linnean Transactions, together with a small quantity of asafœtida, differing in no respect from the ordinary condition of that substance as

18780 Stem cylindric simple areolate, Flowers nearly sessile small aggregate, Outer series of corona 5-cleft, Lobe-bifid with teeth between

18781 Hairy, Leaves elliptic cordate doubly crenate, Spikes secund revolute, Sepals lanceolate, Stamens ciliated
18782 Hispid, Leaves ovate cordate doubly serrate pilose, Spikes unilateral scorpioid, Sepals linear-lanceolate

18783 Leaves reniformly orbicular coarsely toothed, Umbels 3—4-rayed, Umbellules many-flowered, Involucra and Involucels 3-leaved

18784 Clothed with lanuginous down, Leaves ovate-lanceolate

18785 Clothed with short adpressed down, Leaves oblong-linear coriaceous

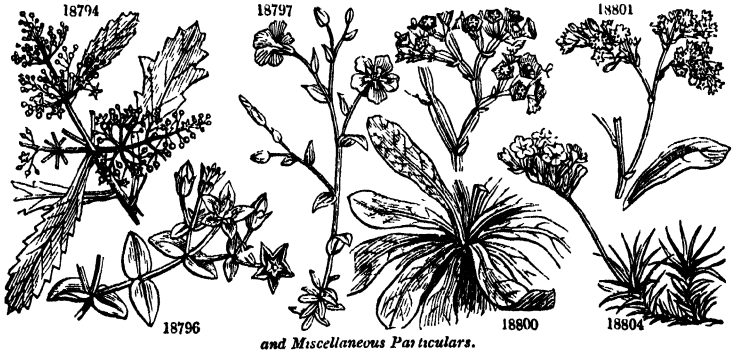
18786 Stems floating creeping at base, Lvs bipinnate, Segments simple or pinnatifid, Leaflets wedge-shaped, Umbels opposite the leaves

18787 Downy, Stem simple furnished with leafless dilated petioles, Radical Leaves glaucous with trisected petioles and bipinnate divisions, Segments linear-lanceolate unequal-sided entire

TRIGYNIA.

18788 Habit of *V dentàtum.* The flowers are white in round heads, size of those of the Guelder Rose or Snowball
18789 Habit of *V dentàtum* Leaves plicate with a few rough hairs on both sides, Flowers small white
18790 Covered with stellate scurfy down, Leaves ovate obtuse denticulated, Cymes compound somewhat pyramidal

PENTAGYNIA.



18791 Clothed with adpressed hairs, Branches slender, Leaves small lanceolate, Pedicels 1-flwd terminal and lateral, Corolla silky with crenulated edges [terminal, Pedicels umbelliferous
18792 Unarmed, Lvs petiolate 7-nerved 7-lobed, adult ones glabr, young ones woolly, Lobes ovate serrated, Panicles
18793 Leaves trifoliate
18794 Leaves thick smooth, in the young plant elongated reflexed simple toothed lanceolate, in the old tree ternate, Flowers racemosely umbellate
18795 Smooth, Leaves tripinnate, Leaflets petiolate cordate oblong serrated, sometimes 3-lobed, Umbels compound racemose

18796 Leaves oblong, Flowers disposed in cymose corymbs

[on the edges, Flower large crimson
18797 Glaucous branching upwards, Lower Leaves narrow obtuse closely packed, Cauline ones ovate acute fringed

18798 Lvs oblong-lanceolate faintly nerved, Scape branched, Branches panicled, Flowers unilateral distant, Bracts large
18799 Radical lvs obl. or obov, Scape leafless branched at top, Branches downy terete, Fascicles 4-flwd crwdd secund
18800 Stem shrubby leafy at top, Lvs sessile large obovate-spatulate, Panicles compound, Branches of Panicle winged
18801 Lvs glaucescent oblong 3-nerved at base, Scape stiff panicled, Branches angular, Bracts 4-flwd, Flwrs secund
18802 Erect branchd, Stem compressed, Lvs spatulate glaucous dotted, Pan lateral elon, Spikes many-flwd, Cal hispid
18803 Arborescent, Lvs ovate obtuse narrow at the base, Panicle compound terminal, Branches of Panicle 2-edged

18804 Branches naked at base beset with old deflexed lvs, Lvs acerose the lowest flat the rest subulate trigonal, Scapes downy Spike of 7—9 dense spikelets, Bracts crowded longer than the tube of calyx mucronate

and Miscellaneous Particulars.

it occurs in commerce. The species is found, as it would appear, in the greatest abundance in the Persian provinces of Khorassan and Laar, and thence extends on the one hand into the plains of Turkistan upon the Oxus, where it seems to have been met by Sir Alexander Burnes, and on the other stretches across from Beloochistan, through Candahar and other provinces of Affghanistan, to the eastern side of the valley of the Indus in Astore. Dr Falconer has not met with it in Cashmere. Besides the gum resin, the fruits of *Nárthex Asafœ'tida* are also imported into India for medicinal use, and along with them the fruits of another umbelliferous plant, which Dr. Falconer found to belong to a true *Férula*, and which are sold under the name of *Doogoo*, a word evidently connected with the Greek δαῦκος Dr. Falconer also mentions another umbelliferous fruit in the collection of Dr. Royle, labelled as the seed of the wild asafœtida plant, collected and brought to England by Sir John MacNeill from Persia, which differs widely from the fruit both of *Nárthex* and *Férula*, and belongs to another tribe of *Umbelliferæ*.

2948 *Grammánthes* is a pretty little annual plant. It requires to be grown in a pot placed in a greenhouse It will, perhaps, succeed on rockwork. A light sandy soil suits it best.

2949. *Acantholimon glumàceum* is a pretty little Alpine plant of easy culture It should be grown in a pot filled with a light loamy soil well drained. It is propagated by dividing the plant at the root, or by seed.

Page 236. CLASS VI.—HEXANDRIA. 6 STAMENS.

Order I. MONOGYNIA. 6 Stamens. 1 Style

2950. 712*d* *Elisèna* Tube of Perianth short, subcylindrical, decurved · Limb reflexedly spreading. Corona cylindrical, deflexed. Stamens declinate, recurved. Anthers short, incumbent, fixed by the middle Bulb covered by thick persistent fibres

2951 712*f* *Hymenocállis* All as in *Pancrátium*; but the tube is straight, angularly cylindrical Filaments flaccid, distant on the cup. Anthers long, pendulous Stigma roundish. Ovarium trigonal, 3-celled. Seeds fleshy, oblong, green.

2952 713*a*. *Callipsỳche* Flowers declinate. Sepals and Petals combined into a short tube, regular Sepals boat-formed. Stamens and Style very long, deflexed. Filaments furnished each with a tubercle at base Anthers versatile Ovarium 3-celled, many-ovulate Stigma capitate.

2953 715*a* *Calliphèa* Tube of Perianth narrow, funnel-shaped, nearly straight · Limb regular, stellate Stamens furnished with a bristle on each side. Anthers subsagittate, a little curved Style straight. Stigma subrecurved, 3-lobed, lower lobe a little longer. Cells of Ovarium 2—3-seeded. Seeds a little quadrate.

2954. 717*a*. *Sphærótele*. Perianth tubular. Throat naked. Limb 6-cleft, equal, erect Segments ovate, obtuse, flat. Stamens inserted in the throat. Filaments erect Stigma hemispheric. Ovarium trigonal, 3-celled, many-seeded

2955. 722*a*. *Phenakospérmum* This genus differs from *Ravenàla*, 722., in the seeds in the cells being disposed in many series, obovate, subglobose, on long stiff funicles, and covered with a comose stupose aril Stamens 6, all perfect.

2956 725*a* *Dasylirion* Flowers dicœcious. Male Perianth 6-parted to the base. Stamens free. Filaments a little thickened in the middle Anthers fixed by the back. Glands six, at the base of the stamens, similar to the rudiments of ovaria. Female flower unknown.

2957. 725*b* *Beschornèria*. Perianth 6-parted, the bottom nectariferous. Segments conniving into a tube, but spread a little at top Stamens inserted in the bottom of the perianth, subulate Ovarium subclavate, bluntly hexagonal, 3-celled, the top free, conical, 3-furrowed. Seeds few, 2-rows in each cell. Style trisulcate, triangular Stigma same thickness as the style, obtuse, papillose

2958 726*a*. *Acanthóstachys* Perianth 6-parted, inner 3 petaloid. Stamens 6, exterior 3 epigynous, and interior 3 epipetalous Ovarium 3-celled, flatly trigonal Cells biovulate. Style filiform. Stigma funnel-shaped, 3-lobed, minutely fringed. Berry triquetrous, 3-celled Cells 2-seeded.

2959 728*a*. *Pùya* Perianth 6-parted Segments convolute Stamens subulate Style filiform Stigmas 3, linear, spirally twisted. Capsule cartilaginous, trigonal, 3-celled, 3-valved. Seeds numerous, compressed, margined.

2960. 729*a* *Vrièsia* Perianth 6-parted outer 3 convolute, equal, inner 3 petaloid, revolute at apex. Scales 2 to each petal Stamens 6, 3 of which are free, the other 3 connate at the base. Ovarium half-inferior. Stigma 3-lobed: Lobes convolute and situated, villous.

2961 729*b* *Æchmèa*. Bractea cup-shaped Perianth 6-parted, spirally convolute · outer 3 like a calyx; inner 3 petaloid Stamens filiform, adnate to the petals. Berry ovate, globose, 3-celled, many-seeded. Style filiform Stigmas 2—3, linear, petaloid.

2962. 731*a* *Phædranássa* Perianth tubular, pendulous: Tube 6-furrowed Segments spatulate, convolute Stamens exserted. Filaments flattened, upper 3 the shortest Anthers versatile. Style straight. Stigma clavate, simple. Ovarium trigonal, oblong, constricted at top, 3-celled, many-seeded

2963. 736*a* *Gastronèma* Filaments inserted in the tube, 3 of which are declinate and twisted, and the 3 lower ones straight, conniving at top. Tube of Corolla curved, cylindrical below, and ventricose above Ovarium oval

2964. 739*a*. *Phycélla*. Spathe 2-valved Corolla tubular, 6-parted, convolutely closed, campanulately subringent Filaments inserted in the base of the segments, declinate exterior ones stretched out into two subulate processes Anthers ovate, versatile Ovarium trigonal, 3-celled, biseriately many-seeded. Style filiform, declinate Stigma simple. Seeds membranous.

2965 739*b* *Callithaùma* Perianth 6-parted Tube slender, cylindrical, nearly horizontal Corona 12-lobed funnel-shaped. limb spreading a little. Filaments short, conniving, inserted into the side of the corona. Stigma obtuse

2966. 739*c*. *Sprekèlia* Perianth declinate, annular at base, with a very short or scarcely with any tube. Stamens fascicled, declinate, clasped by lower lip

2967 739*d* *Ixiolirion* Perianth 6-parted, narrowly funnel-shaped · Segments reflexedly spreading Stamens straight. Anthers fixed by the base, erect. Style straight. Capsule oblong, chartaceous, scarcely operculate. Seeds black.

2968 739*e*. *Lycòris*. All as in *Amaryllis*, but having the tube declinate, widened towards the throat, and the filaments combined into a tube with the segments of the perianth, 3 of which are declinate and twisted, and the 3 lower ones straight, conniving at top.

History, Use, Propagation, Culture,

2560. *Cobúrghia*. The species will grow in a rich alluvial soil with a little rotten manure, and they appear to dislike sunshine and fine weather. They stand out of doors all the summer and autumn, and on the approach of

2969 739*f* *Collàmia.* Perianth subcylindrical, 6-parted. Sepals and Petals unlike, forming themselves into a tube Stamens and Style straight Ovarium turbinate, operculate, glandular at top. Pericarp opercular, pulpy. Pulps edible.

2970 748*a.* *Bomàrea.* Perianth 6-parted Sepals and Petals of a different form. Petaline filaments earliest. Capsule obtusely trigonal dehiscing at top

2971 758*a.* *Atáccia* Perigone 6-parted inner segments large, reflexed. Stamens inserted in base of segments. Filaments broad, concave above. Anthers 2-celled. Cells free. Stigma capitate, 3-lobed. Berry 3-celled, many-seeded. Seeds lunate.

2972 765*a.* *Cyanótis* Flowers nearly regular Sepals 6, exterior ones nearly equal, navicular, connate at base, persistent, interior 3 longer, petaloid, connate by the claws, caducous Stamens nearly equal, adhering to the tube, very long Capsule trigonal, 3-celled, membranous, 3-valved. Valves septiferous in the middle. Ovula twin in the cells

2973 765*b* *Thercèsia* *Perianth bell-shaped, 6-parted* Sepals oblong, coloured, furnished with a nectariferous cavity inside Stamens hypogynous, enclosed Style slender Stigma hardly distinguishable. Ovarium 5-celled, many-seeded, 5-angled, columnar

2974. 774*b* *Cordylìne* Perianth 6-cleft, equal, deciduous Filaments glabrous, inserted in the throat of perianth. Stigma small, 3-lobed. Berry globose, 3-celled. Seeds many, strophiolate

2975 771*c* *Spironema* Perianth 6 cleft, the 3 petaloid segments enclosed Stamens hypogynous. Filaments spiral Anthers cordate, petaloid, bearing a cell at the base of each lobe. Stigma papillose Ovarium 3-celled, few-seeded Ovula horizontal

2976 788*a* *Luzuriàga* Corolla 6-petaled Petals distinct, equal 3 outer ones narrow. Stamens inserted in the receptacle Anthers erect, sagittate. Style triquetrous Stigma triangular Berry triangular, with a membranous dissepiment Seeds 2 in each cell from abortion.

2977 788*b* *Callixene* Corolla deeply 6-parted, equal, alternate segments glandular at base Stamens dilated at base Anthers versatile Stigma trigonal Berry small, 3-celled Cells pulpy inside, usually 3-seeded.

2978 788*c* *Philesia* Perianth campanulate, 6-parted, regular 3 outer segments acuminate, 3 inner ones twice as long, obtuse Stamens connate at the base. Anthers long, versatile Stigma 3-lobed Berry subtrigonal, 3-celled, many-seeded

2979 789*a* *Lapagèria.* Perianth 6-leaved, campanulately connivng outer leaves carinated, inner ones broader, subunguiculate. Stamens subulate. Anthers fixed by their base Ovarium 1-celled, with 3 parietal placentas Ovula numerous, mucous. Stigma clavate, oval-oblong Berry 1-celled, many-seeded Seeds obovate, truncate, nestling in pulp

2980 789*b* *Ripógonum* Perianth 6-parted, equal, spreading, bibracteate, deciduous Stamens subulate, glabrous Anthers longer, emarginate, inserted by their base. Ovarium 3-celled. cells 1-seeded Style short. Stigma 3-lobed, obtuse Berry 1—2-seeded Seeds subglabrous

2981 808*a* *Bidwillia.* This genus differs from *Asphódelus* in the filaments being clavate above

2982 809*a* *Simethis* Perianth of 6 spreading 5—7-nerved segments. Filaments woolly at apex. Capsule globose, 3-lobed, 3-celled, 6-seeded

2983 809*b* *Echcándia* Perianth 6-parted Sepals all more or less twisted and rolled back Filaments enlarging outwards Style filiform Capsule triangular, roundish, oblong, 3-celled Cells many-seeded

2984 813*a* *Chrysobáctron* Flowers racemose, sometimes dioecious Perianth 6-leaved Anthers versatile Ovarium 3-furrowed. Female flowers as in the male, but the anthers are incomplete Capsule ovate, 3-celled, 3-valved Cells usually 2-seeded. Style strong Stigma capitate, 3—6-lobed. Anthers closely connected together.

2985 817*a* *Dimmiópsis* Perianth green, campanulate, nearly equal. Stamens equal, epipetalous. Ovarium tapering into the style Ovula twin, collateral

2986 821*a* *Bellevallia* Perianth campanulate, 6-parted. Stamens exserted or enclosed. Capsule membranous, triangular, 3-celled, 3-valved Cells 2-seeded Stigma obtuse entire.

2987 2590*a* *Isómeris.* Sepals united at base Petals 4, oblong, sessile, nearly regular. Torus fleshy, dilated above. Stamens equal, much exserted. Capsule large, obovate-elliptic, inflated, coriaceous, indehiscent, stipitate Seeds numerous, large

2988 836*a* *Anópteris* Calyx 6-lobed. Petals 6. Stigma bifid. Capsule 1-celled, 2-valved Seeds compressed, furnished with a wing at top.

2989 836*b* *Eleutherìne* Stamens free. Style trifid at apex. Capsule 3-celled, dehiscent at top, chartaceous. Seeds wrinkled, roundish Perianth fugacious, regular.

2990 836*c* *Prepùsa* Calyx large, 6-winged, 6-cleft, coloured Corolla campanulate, 6-cleft, with a swollen tube and a naked throat. Stamens as if they were emerging from the duplicatures of the corolla. Stigma bilamellate Capsule 1-celled, 2-valved, many-seeded. Margins of valves inflexed, placentiferous. Seeds nearly globose, many-seeded.

2991. 836*d* *Trimèzia.* Perianth very unequal: Claws of sepaline segments broad, the lamina spreading, of the petaline segments narrower, incurved, the lamina recurved Stamens filiform, spiral, inserted in the papillæ of the disk Anthers and Lobes of Style cohering firmly. Style linear, 3-lobed at apex Lobes lamina-formed cucullate Stigma soft, 2-lobed. Lobes bifarious. Seeds glabrous, bay-coloured, roundish, with a hard testa.

MONOGYNIA.

18805 Leaves green erectish acute sheathing at base, Scape 2-edged, Tube of perianth about equal to the segments, Sepals and petals ovate [hardly joined into a corona

18806 Leaves green, Scape compressed, Tube of Perianth clavate 3 times longer than limb, Filaments membranous

18807 Bulb ov., Lvs glauc obt., thick, Spathe green exceeding short pedun., Tube a little curved, Tth of Cor. 2 lobd

18808 Lvs stiff ac glauc, Umbs 3—5-flwd, Flws sess., Tube clav archd, Tth of Coron twin, Style defl, Stams straight

18809 Bulb bulbif about 4-flwd, Lvs glauc, Peduncs uneq, Flws pendulous, Lamb short, Anthers equal to the limb

18810 Bulb small stoloniferous, Leaves green a foot long channelled acute, Sepals so close as to form a narrow tube [limb

18811 Leaves glaucous bluntish, Scape compressed 2-edged, Teeth of Corona 2-lobed green, Stamens shorter than

18812 Scape twice the length of the leaves compressed, Spathe about 4-flowered, Segment ovate elliptic, Sinuses of Corona bidentate

and Miscellaneous Particulars

winter the leaves perish, and the pots in which they grow may then be put in a dry part of a greenhouse till next spring.

History, Use, Propagation, Culture,

2950 *Elisèna longipétala* will grow best in white sand with a small admixture of loam. It would probably succeed in a bed of white sand out of doors, if it can be kept from shooting too early in spring.
2951. *Hymenocállis*. The flowers of *H Borkiàna* smell like Vanilla.
2952. *Callipsỳche*. This bulb should be potted in sandy loam and leaf mould. In summer, while growing, it requires to be kept in a temperature of 75° or 80° by day and shaded in sunny weather. In autumn, when the leaves die, it should be kept in a warm greenhouse quite dry for a few weeks. As soon as the bulb begins to shoot it should again be watered and placed in more heat. It is a beautiful plant when in blossom.
2953. *Caliphùrea*. This genus is very nearly allied to *Eùrycles* and requires the same treatment.
2954. *Sphærótele* The species are rather hardy. They require the same treatment as the greenhouse kinds of *Amarýllis*, that is, to be kept dry when in a dormant state, and plenty of water given to them while growing.

18813 Scape 2-edged about 6-flowered, Limb of Perianth revolute, Teeth of Corona irregularly trifid

18814 Leaves dull green 2½ feet long, Flowers 7 in an umbel, white with a very thin entire transparent corona
18815 Leaves petiolate costate 1 foot, Scape 5 inches, Spathe 6-flowered, Corona narrow toothed, Tube slender
18816 Scape 2-edgd, Spathe 8-flwd, Lvs green, Corona long cylind. which gives it a hose in hose appearance
18817 Scape compressed glaucous, Corona with small teeth, Leaves 3 subpetiolate an inch broad linear
18818 Scape 2-edged 10—12-flowered longer than leaves, Leaves linear-oblong streaked, Segments of Perianth linear-lanceolate, Corona spreading closely toothed
18819 Leaves erect acuminated lorate, Scape 2-edged, Umbel many-flowered, Flowers sessile, Tube 6 inches long, Corona obconical free bluntly toothed between the stamens

18820 Leaves few green 4 inches wide, Scape 10-flowered glaucous, Stamens very long incurved

18821 Leaves stiff ensiform shorter than scape, Tube of Perianth equal to limb, Corona truncate toothless emarginate, Umbels dense, Pedicels articulated, outer ones the longest

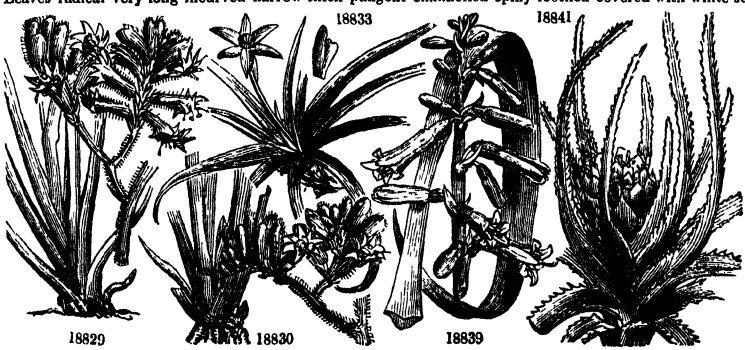
18822 Bulb ovate, Leaves petiolate depressed ovate subplicate green, Scape nearly terete glaucous, Umbels 7-flowered

18823 Scape glaucescent 5-flowered, Peduncles short umbellate, Style and Stamens exserted
18824 Lvs obov.-obl. 3-nerved, Umbel 6-flwd, Seg of Per. obl erect, Stam exserted, Teeth of Corona obt. undivided
18825 Lvs ligul. with revol edges, Umbel 2-flwd, Flws pendul . Seg. of Per. ovate, Stams enclosed, Corona toothless,
18826 Leaves with rolled-back edges, Flowers pendulous, Corona toothless [Fils 2—3-toothed, Style exserted

18827 Corona acutely cut, Filaments wiry setose, Anthers exceeding the limb

18828 Leaves oblong, Umbel few-flowered, Lateral teeth of Filaments divided

[bristles, Anthers mutic
18829 Leaves equitant linear falcate covered with stellate tomentum, Panicles much branched clothed with rufous
18830 Stem tall ter. pan clthd with hoary tom. below, Lvs lin stiff strght glabr , Pan. clthd with purp tom., Anth. mut.
18831 Stem angul , Lvs equit lin. subfalc glabr , Spks sec , Pan clthd with plum. brwnsh hairs, Per. tom., Anths apic.
18832 Rhizoma scaly cormoid, Leaves falcate smoothish much shorter than simple woolly scape, Racemes secund elongated, Limb of Perianth erect, Anthers mutic



18833 Caudex short divided covered by the vestiges of the old leaves, Leaves narrow keeled glaucous spiny serrated, Scape shorter than leaves, Perianth glabrous, Filaments broad truncate
18834 Caudex short, Leaves linear acuminated imbricate with broad stem-clasping bases finely spiny-serrated on margin and keel recurved, Scape and Ovaria tubercled, Filaments broad bifid

18835 Leaves large resembling those of *Ur̀ana* or *Mùsa*, Stems tall, Spathes or Bracts many-flowered

18836 Leaves linear-oblong acuminate unarmed glaucescent with the margins callously ciliated scabrous beneath

18837 Leaves long narrow spiny-serrate green
18838 Leaves narrow glaucous spiny-serrated ending in a tuft of hairs or fibres

18839 Leaves radical linear channelled recurved spinosely denticulate, Scapes erect long simple, Flowers nutant fascicled bracteate, Fascicles remote secund
18840 Leaves radical thick broad-lanceolate smooth but scabrous to the touch beneath cartilaginously annulated, Scapes tall racemosely subpanicled, Bracts large red, Flowers nutant fascicled pedunculate
18841 Leaves long scurfy curved spiny-toothed with a long bristle-shaped point, Spike globose nearly sessile, Bracts oblong serrulate mucronate mealy, Sepals narrow [Scape simple long scurfy, Bracts coloured
18842 Leaves radical very long incurved narrow thick pungent channelled spiny-toothed covered with white scurf,

and Miscellaneous Particulars.

2955 *Phenakospèrmum.* This is a noble plant growing in moist shady places in Guiana, and north of Brazil, as in Maranham and Para It is of as easy culture as *Mùsa* or *Helicònia*. It is propagated by division. It will require plenty of moisture and heat.

2956. *Dasylirion.* The species of *Dasylirion* require the same treatment as the more tender species of *Yùcca*.

2957. *Beschornèria.* The cultivation of the species of this genus is the same as that for *Fourcræ'a* or *Agàve* They are tall handsome plants, with green drooping flowers and coloured bracts.

2958. *Acanthòstachys* requires the same treatment as *Agàve* or *Littæ'a*. The plant is from the southern part of Brazil, and is covered with a white scurf The bracts are large and bright red. The flowers are sulphur colour. It requires a heat of from 58° to 60°. A soil composed of equal parts of sand and decayed leaves seems most agreeable to it. The leaves are all radical and keeled

History, Use, Propagation, Culture,

2959. *Pùya* is a genus of pretty plants They have much of the habit of the pineapple. They are half-epiphytal, and will grow in the poorest situations, as on stones or wood. They succeed well with the same kind of treatment as epiphytal orchideous plants.

2960 *Vriésia*. This genus is nearly allied to *Tillándsia*. The species will grow suspended by a piece of wire from a beam in an orchidaceous house, or they may be suspended in a wire basket. The bracts of all are of a beautiful red colour. In fact they require the same kind of culture as the tropical epiphytal *Orchideæ* When p...

18843 Lvs entire smooth reddish underneath, Rac. 6 inches long one-sided, Fl. 2 inches long of a deep vermilion
18844 Lvs spiny at base mealy beneath, Rac. dense, Bracts large smth, Pets 2 round. conc with cren. scale at base
18845 Lvs lanc. smth spiny-tthd at base, Scape cvd with fine wool as well as bracts, Spike 3 in. long, Flws 2 in. long
18846 Stm lfy finely tom., Lvs long lanc quite ent. glab naked shing, Shths tom , Rac term. pyr , Pets naked at base
18847 Lvs lin long entire dil. at base spiny cil glab , Scape bracteate simple vill., Bracts villous, Pets naked
18848 Lvs all rad. long acum. ent, with inflated sheaths cll above, Spike rad. capit bract , Brcts hairy, Pets with scale
18849 Lvs ensif keel. scurfy ben. spiny-ser. above, Scape simple, Ped and Cal mealy, Sep. obt , Pet. lin with ser, scale
18850 Lvs lanc ent. cusp glab ab powd. ben , Scape simp. scaly powd., Scales lanc ent., Rac elong. simp , Pet. nak.
18851 Lvs ensiform acuminated downy outside at base, Raceme slender panicled, Flowers minute, Petals lanceolate naked at base acute

18852 Lvs ensiform membranous unarmed glabrous undulated distich, Peduncle short sheathed by bracts, Bracts convolute purple, Spike simple
β Stem 5—6 feet, Leaves 3 times longer than the spike
18853 Lvs broad thin ribbed rather glauc , Spike long cone-shaped, Bracts crimson tipped with green, Cor 2 in long
18854 Ps -bulb., First Lvs dil at base nar. upw. spiny ser , secondary lanc. unarmed prum , Sp sess. imb , Br wool.
18855 Pseudo-bulb. stemless, Lvs of two forms like those of *P. heterophýlla*, longer than the spks, Sep lin. lanc. keeled
18856 Stem simp tall scaly powd , Lvs quite ent dentic. at top powd ben., Sp. term., Br imbr. rose-cld, Fl. ses. rec
18857 Lvs linear taper-pointed spiny-toothed smoothish, Scape panicled, Bracts oblong concave, Petals obtuse blue

18858 Lvs acum. distantly spinose glab., Scales of tomen. scape acum. ent , Spike elong dense-flowered, Bracts acute

[distich usually coloured
18859 Leaves few broad at base and sheathing around the bulb terete convolute, Spikes branched bracteate, Bracts
18860 Scape shorter than the leaves, Spike simple leafy at base, Bracts greenish purple lepidated
18861 Scape higher than the leaves, Spike leafless branched, Bracts naked scarlet distich keeled uncinate at top
18862 Scape shorter than the leaves, Spike branched, Bracts foliaceous scarlet naked, lower ones longer than spike

18863 Scape sessile among the lvs, Spike nearly simple leafless, Bracts green coriaceous ventricose loosely lepidated
18864 Leaves oblong-lanceolate quite entire, Spike many-flwd a little branched pendulous, Flws sessile, Bracts small
18865 Lepidoted, Leaves ovate-lanceolate channelled, outer ones recurved sheathing the scape, Bracts lanceolate acuminated at base and green at top

18866 Leaves strap-shaped obtuse mucronate spinosely dentate tipped with blood-red, Bracts broad-oval imbricate obtuse concave, Spike capitate subsessile
18867 Closely allied to *B nudicaúlis*, but the Petals are obt , the Spines green not black and the Lvs narrower green
18868 Lvs ligul dp grn acum spiny-tthd, Pan many-flwd, Flor Brcts ov -mucr rose-cld, as well as calyx, Cor exsert.
18869 Leaves channelled spiny-toothed recurved ventricose at base, Spike conical many-ranked mealy, Bracts roundish acuminate imbricate [red scales, Bracts coloured, Racs secund, Flws fascicled, Petals revolute
18870 Leaves ligulate channelled banded with white with a few spiny teeth near base, Stem smooth with large loose
18871 Lvs erect brd lig obt. conc. spiny serr , Spathe ov -lanc , Spkethyrs almst without brcts, Flws dense, Pets obt.
18872 Leaves lanceolate acuminate spiny-toothed, Scape branched naked below the flowers, Bracts lanceolate quite entire red

[gated scarlet, Bracts coloured
18873 Leaves broad-oblong mucronate channelled entire glabrous crossed by black bands, Scape scaly, Spike elon-
18874 Leaves long subul. glauc. or mealy, Scape brnchd at top with distich branches and bracts forming spikes, lower
18875 Leaves oblong acute dilated at the base, Sepals a little shorter than corolla, Stamens exserted [bracts cld

[coloured, Partial Bracts and Calyxes ending in a spine
18876 Leaves ligulate spiny ciliated convolute at base, Racemes spicate, Flowers sessile glomerate, Bracts leafy
18877 Lvs clasping each other at base swrd-shpd spiny-serrul , Spks short stout a little brnchd with rich scarlet stlk,
18878 Lvs ligulate convolute at base spiny-serrate, Racemes spicate, Flowers pale pink [Flws scarlet, blue at top

18879 Leaves ligulate striated obscurely banded serrulated of a different colour beneath, Bracts lanceolate, Flowers sessile in the panicle

[filiform, Segments of Perianth linear, Stamens exserted
18880 Lvs broad undul. sheath red at base obscurely spotted, Umbel many-flowered, Spathe of 3—6 acute valves, Bracts
18881 Lvs broad undul. glabr., Scape compr. dot. at base as well as peti , Umb many-flwd hemisph., Segs of Per. lin

and Miscellaneous Particulars.

it should be in leaf mould, and the pots should be well drained with potsherds. Water should be given plentifully in the summer months, but sparingly in winter.

2961. *Æchmèa.* A genus composed of epiphytal pineapple-like plants with long racemes or spikes of scarlet or red flowers, and large scarlet or red bracts which last give splendour to the plants They succeed well with the same treatment as tropical epiphytal *Orchideæ*. They will grow on blocks of wood, in baskets, or in pots well drained with potsherds, in leaf mould. They require plenty of heat and moisture when in a growing state.

History, Use, Propagation, Culture,

2962. *Phædranássa.* This is a splendid bulb with cylindrical, fleshy, rather fistular scapes, and broad green petiolate leaves. The flowers are about 6 in an umbel, and are pendulous, long and tubular, green at base and apex, the stamens protrude, and the stigma is clavate. *P chlorâcea* grows on rocks at the village of Saragura near Loxa in Peru, at the height of 9000 feet above the level of the sea; and *P. obtûsa* in the valley of San Antonia in the province of Quito They are both greenhouse bulbs They require to be potted in light, rich, sandy loam, kept quite dry during the season of rest, and fully supplied with moisture when in a growing state. The flowers rise before the leaves.

2963. *Gastronêma* requires the same culture and treatment as *Amarýllis.*

2964. *Phycélla.* Pretty bulbs and require the same treatment as *Amarýllis*, to be kept dry when in a dormant state and given plenty of water while growing

2965. *Callithaúma.* These are bulbs with green flowers which are stated to grow in their native country as tall

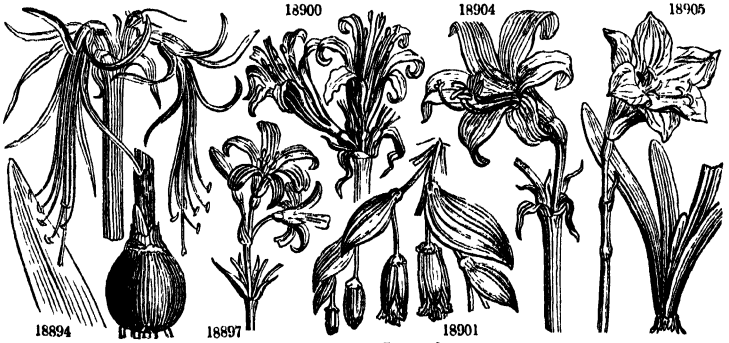
18882 Umbel about 6-flowered, Flowers drooping tubular, Leaves green acutish petiolate rising with the flower, Stamens longer than style
18883 Umbel 6-flowered, Flowers drooping, Leaves oblong petiolate, Scape terete glaucous subspiral, Stamens shorter than style

18884 Leaves flat subglaucous one fourth to three fifths of an inch broad, Spathe exceeding the peduncle, Flowers small, Sepals concave, Petals short deeply cut green with two spots reflexed at top

18885 Leaves solitary linear spatulate obtuse green longer than the 1-flowered stem, Spathe 2-leaved, Flower sessile erect, Tube terete widened at throat, Segments oblong equal

β Leaves pale green thick, Flowers nearly sessile red marked with white afterwards deep red, Corolla campanulately funnel-shaped revolute at top

18886 Leaves obtuse, Perianth funnel-shaped, Scape 3—4-flowered
β Lvs an inch broad blntsh, Scape glauc usually 2-flwd, Per compressed laterally brick-col. with deeper veins
18887 Lvs strap-shaped green, Scape glaucous, Flowers in pairs erect bell-shaped the divisions separate to the base, Corona short green



18888 Lvs erect obtuse glaucescent shorter than the many-flowered scape, Umbel divaricate, Peduncles slender
[tube which is destitute of appendages in the throat
18889 Lvs lorate-lanceolate, Scape glaucous 2-flowered, Segments of perianth combined into a curved funnel-shaped
[lorate sheathed, Corolla ringent campanulate drooping
18890 Spathe 2-flowered, Upper segments of Perianth broader and recurved, lower ones narrow, Tube very short, Lvs
18891 Spathe 3-flowered, Segms of Perianth arched, Stamens unappendiculate at the base inserted between the fringed ring of the throat, Lvs linear recurved
[than corolla, Stigma obtuse
18892 Bulb cylindrical, Lvs flat green, Scape green 2-edged, Limb of Perianth green equal to corona, Style shorter

18893 Lvs narrower, Limb of Perianth exceeding the corona, Style exceeding the Perianth, Stigma dilated somewhat 3-lobed
[lower lip clasping the stamens, Stigma 3-lobed
18894 Scape 4-flowered, Peduncles 1 inch, Spathe reddish 2 inches, Segments of Perianth striated narrow at base, the
18895 Lvs linear glaucous, Flws solitary drooping, Segms of Perianth marked with white in the middle, Petals
18896 Tube fringed, Corolla nodding with a very ringent limb, Stamens enclosed
[lanceol recurved

18897 Lvs glaucous channelled stem furnished with leaf-formed bracts, Flowers racemosely paniculed, Peduncles 1 3-flwd, Corolla tubularly closed in the lower part
18898 Distinguished from *Ix. montànum* by the expanded rotate flowers

18899 Ovary subspherical, Perianth with a short tube, and linear-oblong undulated segments shorter than the stamens
18900 Flowers stalked erect funnel-shaped clavate, Segments linear-lanceolate, Stamens straight

[lucrate at base, Perianth subcylindrical, Sepals oblong, Petals spatulate
18901 Glaucous, Stem glabrous leafy, Leaves lanceolate downy beneath, Racemes umbellate terminal pendulous involucrate
18902 Glaucous, Stem erect filiform flexuous, Lvs oblong obtuse, Flowers 1-4 pendulous cylindrical
[narrow whitish in the lower part, Stamens short declinate
18903 Lvs narrow flaccid mottled with pale blotches upon a dark green ground, Flws small pale ultramarine, Segms
[at base, appendages of throat linear acuminate, Stigma nearly simple
18904 Lvs linear green convex on back, Umbel 2-3-flwd, Perianth campanulate revolute at apex, filaments glandular
[lar erect, Sepals apiculate, Petals oblong acum., Stigma 3-parted
18905 Lvs erect glaucescent, Scape 1-flowered, Spathe tubular coloured shorter than peduncle, Perianth nearly regular
18906 Lvs bluntish green, Scape a little compressed Spathe 2-valved, Umbels 6 fld, App of throat minutely bearded

and Miscellaneous Particulars.

as a man, but they are actually hardly 3 feet high In this country they scarcely attain 1 foot. This genus is closely akin to *Cobúrghia*, of which, according to Herbert, it may perhaps ultimately be found to form only a section.

2966 *Sprekélia.* Comprehends the *Jacobea Lilies* well known for their splendid ringent declinate large showy blossoms, with the stamens closely embraced by the lower lip. The species grow very well out of doors, planted close against a south wall.

2967 *Ixiolírion* The plants are perfectly hardy and flower freely. Whether it will be better to take up the bulbs to be dried in summer and reset in the autumn is not yet ascertained, but it will probably not be necessary.

2968. *Lycóris.* Cultivated like other hardy bulbs. They require to be grown in a sheltered place

2969. *Collània.* These splendid plants should be reared in a hot-bed and then removed to a cool greenhouse. The open border would in all probability suit them. The genus is nearly allied to *Alstrœmèria.* The roots are edible.

History, Use, Propagation, Culture,

2970. *Bomária.* All the species will do very well out of doors in a warm sheltered situation in summer, but require protection during winter. A light dry soil suits them best. They may be propagated either by dividing the plant at the root or by seed. Being climbers they require to have something to support the stems.
2971 *Atáccia.* A moist warm part of a stove suits these plants. A mixture of loam and peat with plenty of water is the best soil for them. They are readily increased by offsets They are very remarkable plants.

[cuspidate, Petals lanceolate
18907 Lvs oblong obtuse narrow at base, upper ones verticillate, Peduncles of Corymbs 3-flowered, Sepals obovate
18908 A beautiful hybrid. The flws are white spotted with red or purple [ated undulated, Pet. narrow acute
18909 Glab , Lvs of involucre and bracts of peduncs similar to the lvs, Peduncs 2—3-flwd, Sep. broad rounded crenated cili-
18910 Sep obov. apic pale purp , Lower Pet. same col lat pets narrower suff. with deep purp fulv. mid. purp. br. top
18911 Peduncs 2-3-flwd, Lvs resup. 2-3-nerved dot. with white, Seps spat , Pets narrower pale rose yel. middle
18912 Stem flaccid erect, Lvs linear-lanc. denticulated half stem-clasping, Outer Segms of Perianth obovate, inner ones longer lanceolate
[red, Petals greenish-yellow dotted
18913 Lvs acutely subcord toment. beneath, Peduncs about 5-flwd bracteate, Lvs of Invol small, Ovaries downy Seps
18914 Stem terete glabr , Lvs ovate-oblong obtuse glabr., Petioles twisted, Umbels many-flwd composed of 2-flwd peduncs, Bracts obov. spatulate coloured, Petals of 2 forms with a black mark in centre of each inner petal
18915 Flowers in branched umbels, Perianth cylindrical

18916 Lvs oblong-lanceolate many-nerved twisted at base, Nerves pilose above, Umbel many-flwd, Peduncles hispid

β Umbels many-flowered, Flowers golden yellow
γ Umbel 10- (or more) flowered, Peduncles 1—2-flwd bracteate downy, Sepals ovate apiculate green, Petals spatulate dotted inside

18917 Lflts of involucrum 4 in two series, Threads or sterile peduncles many long, Lvs oblong, Scapes and petioles erect elongated smooth
18918 Lflts of involucrum 4 in two series, Threads or sterile peduncles many long, Leaves ovate entire, Scapes and petioles rough

[broadest sharply bifid and toothed, Floriferous branches simple, Fruit obovate
18919 Frond digitately fan-shaped peltate, Petioles prickly on margins, Lflts long cuneated many-nerved, middle one

18920 Procumbent branched pilose, Lvs oblong discoloured greenish grey vittate fringed on the top of the sheaths, Flowers aggregate within a double spathe

[axillary and terminal
18921 Downy, Root fascicled fleshy, Stem branched, Lvs sessile ovate-lanc. cord stem-clasping, Umbels many-flwd
18922 Stemless, Roots fleshy, Lvs oblong acute conc glab. ciliated pilose beneath, Umb loose term sess., Pet. obov.
18923 Internodes of stem tumid, Lvs hardly sheathing obl revol. convex pilose ben , Umb sess axil , Pet concave
18924 Stem ascending, Branches glabrous, Lvs oblong-lanceolate entire glabrous, Nerves and sheaths ciliated, Umb. terminal, Filaments vill , Calyx hairy

18925 Lvs ovate-lanceolate smooth entire acute shining purple beneath stem-clasping, Racemes terminal erect, Sepals and petals obtuse

β Flowers pure white or with a tinge of blue
γ Leaves broader than in the species and the flowers much larger

18926 Leaves stiff erectish with scabrous margins, Flowers conical in long racemes pendulous, Bracts narrow foliaceous equal to or longer than pedicels [pendulous funnel-shaped
18927 Leaves channelled acutely keeled scabrous on the margins, Bracts leaf-formed, Racemes 20-flowered, Flowers
18928 Leaves linear bluntly keeled, Racemes short 6-flowered, Bracts ovate-lanceolate stiff, Perianth inversely conical with 6 gibbosities

18929 Root like that of Crown-imperial

18930 Stem slender leafy few-flowered at top sometimes 1-flowered, Leaves scattered numerous linear acuminated sessile approximate, Corolla salver-shaped nutant with a long tube

β Flowers white
18931 Leaves alternate linear acuminate soft, Flowers racemose horizontal campanulate, Sepals and petals obovate-lanceolate with a darker mark at base, Stamens declinate, Stigma 3-lobed, Capsule turbinate
18932 Lvs scat. lanc , Flws nodding, Lvs of Perianth smooth or a little papillose inside much longer than the stamens
18933 Glabrous, Leaves dense subverticillate ovate-lanc. acute, Flower erect solitary, Sepals and Petals unguiculate
18934 Stem 2—3-flwd, Lvs scatt obl.-lin. scarcely downy up ones subverticil , Peduncs 1-lvd, Segs of Per revol sess.
18935 Lvs crowded scattered sprig puberulous beneath, Racs erect few-flwd, Flws drooping on short peds, Per revol
18936 Stem villous above, Leaves ovate-lanceolate, lower ones alternate, upper ones verticillate, Flowers terminal erect, Segments of Perianth spreading glabrous inside

and Miscellaneous Particulars.

2972. *Cyanòtis.* *Cyanòtis vittàta* is a pretty blotched and banded-leaved procumbent plant. It requires plenty of moisture and heat. A compost of sand, loam, and peat answers it well, and it is readily increased by division or cuttings.

2973. *Therèsia.* This plant requires the same culture and treatment as ***Fritillària.***

History, Use, Propagation, Culture,

2974. *Cordyline* comes very near to *Dracæ'na*, and requires nearly the same treatment: they are fine plants.
2975. *Spironèma* will be despised by the searcher after show plants, but by the lover of fragrant plants it will be cherished, for its smell is delicious To be treated as any common greenhouse plant, increased by division
2976. *Luzuriàga* is a splendid plant when in blossom It grows best in leaf mould and sand, and requires plenty of water while growing Being a creeping radicant plant it is readily increased by cuttings.
2977 *Callixene*, *Lapagèria*, and *Luzuriàga* are all climbing plants from the south of Chili, *Lapagèria* from Chiloe. All three are much alike, and are probably only species of the same genus. Their culture is the same.
2978. *Lapagèria rósea* is a twining plant, with a fascicled fleshy root, 6 ft or more in height The flowers are large, rose-coloured, and spotted with white. Requires leaf mould and sand, and should be trained to a support.

[and ciliated at base, Leaves oblong linear green

18937 Bulb solitary, Stem 1-flowered 2-leaved, Petals acute, inner ones broader, Filaments bearded above the base
18938 Stem 3—4-leaved, Leaves boat-shaped glaucous lying on the ground, Scape 1½ inch purplish smooth, Petals pale purple pale yellow at base green outside

18939 Flowers between those of *F lutea* and *F Meleagris*, Leaves lanceolate green, upper ones glaucous
18940 Stem 1-flowered, 4—6-leaved green glaucous, Flowers pendulous greenish purple tesselated inside

18941 Leaf solitary linear-lanceolate acuminated glaucescent beneath, Scape 3 flowered, Peduncles longer than the linear acuminated bracts, Sepals acute naked, Petals bearded recurved at top

18942 Stem arborescent, Leaves ensiform acute quite entire 2 feet long stem-clasping terminal, Racemes lateral compound

943 Leaves linear channelled acuminated marginate reflexed, Fruit usually 3-seeded but from abortion 1—2-seeded, Panicle simple terminal erect
944 Stem slender branched, Leaves oblong deflexed 4—6 inches long dark green, Flowers terminal and axillary panicled
β Leaves deep green prettily marked with yellowish green blotches

[of 3—5 toothed bracts

945 Habit of *Sanseviera*, glabrous stemless, Lvs oblong-lanceolate, Panicle branched, Flws agglomerate in the axils

946 Lvs linear obtuse, Corona 3-leaved, Leaflets of corona linear-oblong obtuse emarginate or sinuately 2-lobed, 3 or 4 times shorter than limb of calyx, Segments of calyx linear-oblong obtuse

947 Root thick knobby, Stem bearing long narrow dull green ribbed leaves, shining above and glaucous beneath, Panicle compound, Flowers small

948 Stem radicant, Branches tetragonal, Leaves lanceolate oblique, Peduncles 2—4 flowered, Flowers variegated drooping

949 Branches nodose, Leaves numerous small scale-formed entire, Flowers terminal solitary

950 Stem round twining radicant, Leaves alternate ovate-lanceolate cuspidate nerved, Peduncles axillary solitary 1-flowered, Corolla large rose-coloured spotted with white internally

951 Branches flexuous, Leaves alternate petiolate ovate-elliptic entire acute, Flowers solitary axillary and terminal, Peduncles imbricated by scales, Corollas large

952 Stem prickly, Branches unarmed, Leaves alternate opposite or terminal, Racemes undivided, Perianth a little longer than anthers

953 Rhizoma radicant scandent, Lvs recurved quite glabrous ensiform longer than the interrupted spicate racemes, Bracts ovate with membranous edges longer than the flowers

954 Lvs triquetrous about equal in length to the scape, Pedicels twice as long as flowers, Sepals and Petals ovate, Cells of Anthers elongated

[oblong obtuse, Ovarium 6-winged

955 Lvs linear-lanceolate nerved beneath, Spathe 1-valved, Umbel bulbiferous few-flwd, Segments of Perianth ovate-
956 Leaves lorate-linear acute twisted a little, Spathe 3—4-lobed, Umbel bulbiferous fastigiate, Segments of Perianth crenulated
957 Leaves linear shorter than the scape, Umbel many-flowered, Segments of Perianth bluntish, Ovarium elliptic, Cells 6—8-ovulate
958 Scape leafy at base, Leaves linear channelled scabrous on margins, Umbels many-flowered, Sepals narrow oblong obtuse

[ments of Perianth erect acuminate recurved at top

959 Stem leafy at base, Lvs subulate equal to the scapes, Umbels lax, Pedicels much longer than the spathe, Seg-
960 Leaves lorate-linear keeled, Spathe 3—4-lobed, Umbel many flwd compact, Segments of Perianth elliptic obt
961 Leaves narrow semi-terete channelled above, Spathe 1-valved, Umbels about 12-flowered, Stamens enclosed

962 Leaves narrow flat one-half shorter than the scape, Umbels few-flowered contracted, Stamens exserted

963 Leaves semi-cylindrical sulcate beneath with the margins and ribs ciliated, Umbel effuse, Flowers pendulous, Segments of Perianth oblong truncate concave

and Miscellaneous Particulars.

2979 *Phlèsia buxifolia* is enumerated by Dr Joseph Hooker as amongst the handsomest of the antarctic American flora, occurring along the coast of Magellan to Valdivia. According to Mr. Lobb, who first sent it to this country in a living state, it is a plant of slow growth. In its native country it forms large masses on trunks of trees and on rocks, throwing out long slender stems which creep under the decayed bark, and over rocks that are partially covered with soil. The flowers are produced near the extremities of the branches, have a campanulate form of a deep rose-colour, and are sometimes not less in size than a common tulip. Mr. Lobb says he traced the plant from the level of the sea to the snow line of the mountains, and it flourishes more freely at this great elevation.
2980 *Ripógonum.* Only requires the common culture and treatment of ordinary greenhouse climbing shrubs.

History, Use, Propagation, Culture,

2981 *Bidwillia* This plant was introduced by Mr Bidwill of Sydney. It is a native of an elevated tract of table land, called New England, on the south mountains of the Australian continent. It is quite hardy and of easy culture
2982. *Simethis.* Heath mould is the best soil for this plant, and it is increased by division.
2983. *Echeándia* is a tall plant. The flowers are greenish yellow, in clusters of 3—6, and issuing singly from small bracts. They open for 8 or 10 hours and then close and fade. The culture is easy.
2984. *Chrysobáctron.* This pretty little plant grows in boggy places The pot in which it is grown should be placed in water to about the middle.

18964 Umbels bulbif., Lvs broad lin. keeled with carinate sheath rough edg and keel, Seg. of Per. rough, Stam. exsert.
18965 Leaves linear triquetrous, Scape terete, Umbels globose much longer than the spathe, Segments of Perianth acute equal in length to the stamens

18966 Leaves linear subglaucous smooth longer than the scape channelled, Umbels 2—3-flowered [about 2-flwd
18967 Stems terete glabrous sulcate, Branches divaricate ultimate ones forked, Lvs scale-formed, Pedun stiff 2-edged
18968 Leaves rushy erect glabrous length of humble branched scape, Umbels terminal about 4-flowered, Bracts mucronate, Stigma papillose [obtuse longer than stamens
18969 Leaves acuminate channelled length of corymbose raceme, Filaments lanceolate, Sepals and Petals oblong-
18970 Lvs glauc very long chnld, Pan. divaric, Seg of Per lin undul coherg at length spreading, Cells of Ov 2-sd
18971 Lvs ascend broadish channelled with white margins longer than corymbose scape, Sepals and Petals obl obt.
18972 Leaves linear channelled glabrous longer than corymb, Corymbs on short peduncles spreading, Pedicels retracted after florescence, Bracts oval, Ovarium 3-lobed

18973 Raceme loose many-flowered, Flowers twin, Leaves ensiform acute

18974 Very close to *S. peruviana* but much smaller in all its parts, Flowers of the same greyish hue and corymbose arrangement, Bracts curved inwards at top
β Sepals and Petals yellowish brown, Ovarium and Filaments blue [linear almost sterile
18975 Close to *S. stellata*, Racemes loose 3—5-flowered, Bracts as long as pedicels at first but become shorter, Filaments
18976 Lvs numerous ensif longer than scape, Race elong, Bracts small scarious, Seg of Per lin longer than stamens
18977 Lvs strap-shaped flat recurved, Scape terete few-flwd, Peds longer than bracts, Seg of Perianth ovate at length
18978 Bulb 1-leaved very like a small Lily of the valley, Racemes 3—5-flowered, Anthers yellow [reflexed

18979 Leaves linear narrow glaucous, Stem simple 2—3-forked, Peduncles bracteate
18980 Leaves linear elongated keeled, Sheathing glaucous beneath, Flowers racemose, Pedicels 3 together, Stamens thickened

18981 Leaves flat, Racemes loose panicled

18982 Leaves sheathing erect glaucous linear-lanceolate acute, Stem terete branched with a long lanceolate sheathing pale green bract, Flowers issuing singly from small bracts

18983 Leaves linear ligulate acuminated, Racemes loose-flowered, Ovarium obovate, Capsule on a short stipe

18984 Branches very long climbing with straight prickles, Leaves linear-falcate lucid, Peduncles 1-flowered

18985 Leaves succulent, Scape racemose destitute of a coma

18986 Leaves glaucous a foot long channelled rather scabrous on the margins, Peduncles spreading racemose
18987 Corolla campanulate, Flowers racemose, Pedicels longer than the flowers, Filaments membranous, Anthers blue, Capsule roundish at top

[or in pairs
18988 Trailing, Spines tripartite, Leaves linear pungent bright green fascicled, Peduncles axillary 1-flowered solitary
18989 Spines large palmate, Leaves small dark green spiny in fascicles, Peduncles 1-flowered clustered
18990 Straggling, Leaves small ovate or oblong dark green above rather glaucous beneath toothless spiny-pointed, Spines large tripart, Flws single or in clusters [old plants, Spines small slightly tripart, Flws in clusters
18991 Branches downy, Leaves small oblong having 3 or more spiny teeth while young, narrow and mucronate in the
18992 Leaves in clusters 3—4 inches long serrulated ending in a straight point on each side with a spiny point bright green above pale beneath, Spines tripart slender, Flws in fasc [on each side near middle, Racs erect
18993 Brans ferrug, Lvs small close together deep green with three large spiny teeth at apex and one or two more
18994 Lvs narrow obov 3—5-lobed spinose glauces. above green beneath. Racemes few-flowered, Flowers small
18995 Lvs obov obt bright green with a spiny point and several teeth on each sid, Spines small palm, Racs pan erect
18996 Rigid, Spines 3-5-parted, Lvs fascicled cortic wavy opaque mucr sometimes obl-lanc, Rac erect nearly sessile
18997 Brn bearing lvs of two forms, low cord ang, up obov-ellip cori wavy with a few marg spiny tth, Racs droop

and Miscellaneous Particulars.

2955 *Drimmiópsis* A greenhouse bulb requiring the same treatment as *Drimmia* and *Lachenàlia*
2956 *Bellevàlia.* Hardy bulbs of easy culture.
849 *Bérberis* The fruit of *B buxifolia* were used by the officers of Sir James Ross's expedition for tarts and found excellent. *B tinctòria* furnishes a yellow dye *B. Lýcium* has been discovered by Dr Royle to be the real *Lycium indicum* of the Greek physicians, and to this day its extract is used against Ophthalmia with as great success as in the days of Dioscorides. It is an erect subevergreen. In winter the leaves are nearly green on both sides, and at length become dull purple. The berries of *B trifoliàta* are eaten by children in Mexico

History, Use, Propagation, Culture,

2987. *Isòmeris* A curious shrub, the blossoms at first sight resemble those of small-flowered species of *Edwardsia* The whole plant has the odour of *Polanisia.* For culture see *Cápparis*, p. 458

2988. *Anópteris.* This is a fine-looking greenhouse tree or large shrub. The leaves are large and handsome It is of easy culture A compost of sand loam and peat suits it best, and cuttings are easily rooted.

2989. *Eleutherine.* To be kept moist when growing A peat soil is best for it; readily increased by division

2990. *Prepùsa.* All the species are beautiful when in blossom. They grow freely in a mixture of peat-earth and sand with the addition of a little turfy loam They require moisture when in a growing state, but should be kept rather dry in winter as they are apt to damp off at that season They may be propagated by cuttings or division.

19998 Lvs deep green in fascicles 3 inches long oblong with a spiny point and usually with a few spiny teeth on each side pale beneath, Racemes panicled erect

19999 Lvs coriaceous broad obov. distantly spinose and entire reticulated white beneath, Rac. shorter than the lvs

19000 Brnchs angular, Spines tripartite slender, Lvs narrow bluish green glaucous beneath entire or with 1-2-teeth on each side, Racemes drooping slender, Berries purple [erect loose, Berries purple

19001 Spines slender tripart., Lvs dull green glauc beneath oblong obtuse with a spiny point hardly spiny-toothed, Rac

19002 Brn angul., Spin tripart., Lvs glauc ben obl-lanc spiny-pntd usually with several lat teeth, Rac. erect pan.

19003 Lflts 3 sessile at the ends of the petioles deeply scolloped bluish green variegated glaucous beneath, Racemes small axillary sessile 3-5-flowered

19004 Lvs pinnate, Leaflets broad trifurcate, Racemes compound erect [longer than lvs, Petals small

19005 Lvs pinnate, Leaflets 7-15 nearly sessile ovate obtuse mucronate entire, Racemes compound loose drooping

19006 Lvs pinnate slightly prickly, Rac panicled, Berries round dark purple particularly acid

19007 Lvs pinnate a foot long with 5-6 pair of sessile ovate-oblong spiny-toothed leaflets the largest 3 inches long and 1 broad, Racemes simple erect, Berries oblong dark purple

19008 Lvs 18 inches long with 11-12 pairs of closely set leaflets [long and deeply cordate with 5 coarse spiny teeth on each side

19009 Lvs 15 inches long, Lflts 5 slightly cordate, sessile with 3-4 spiny teeth on each side the terminal one 5 inches [lous many-flowered, Berries red oblong

19010 Spines strong tripartite, Lvs lanceolate or obovate entire or awnedly serrated green on both sides, Rac. pendu-

19011 Glabrous dark green, Lvs of 7-9 linear lanceolate spiny serrated very acute leaflets, Rac panicled the lateral branches spreading dense-flowered

19012 A dwarf shrub with fusiform roots, approximate trifoliate leaves, and large yellow flowers disposed in terminal racemes

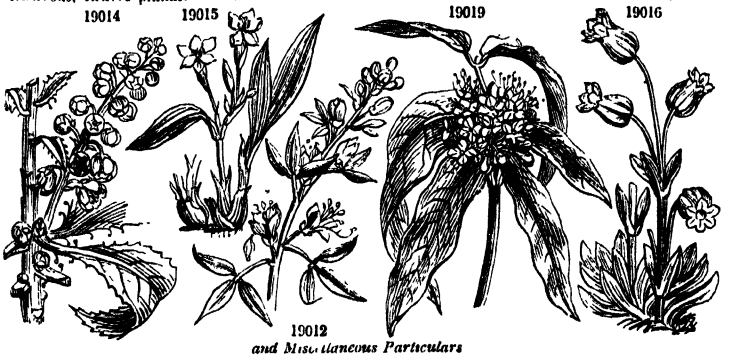
19013 Lvs narrow grass-like, Spike bifid

19014 Glabrous, Lvs alternate plicate ovate-oblong tapering to both ends nearly sessile coriaceous callously toothed, Rac simple terminal, Flwrs sometimes 7-cleft white tinged with purple

19015 Lvs oblong narrowed at base upper ones petiolate longer than the lax pedunculate flowers

19016 Herbaceous tufted, Radical lvs linear-spatulate rather fleshy 1-nerved, cauline lvs subconnate, Calyx campanu- [late large inflated 6-angled coloured

19017 Perianth yellow with a brown transverse mark and spotted at base downy



---

Lamina obovate, spreading Stamens 9, combined with the lamina, torus, and stipe of ovarium. Filaments filiform, exserted, ascending Ovarium stipitate, 3-celled Ovula twin in the cells Styles very short. Stigma simple.

MONOGYNIA.

19018 Leaves alternate imparipinnate, Leaflets 3 pair, Racemes lateral corymbose [fascicled, Flowers hexandrous

19019 Arboreous, Leaves pinnate 3—5 pair of lanceolate smooth undulated acuminated leaflets, Corymbs terminal

and Miscellaneous Particulars

2991 *Trimèzia.* This genus is nearly allied to *Eleutherine*, and requires the same kind of treatment.

862 *Ungnàdia speciòsa* is a fine hardy tree, lately introduced, nearly allied to the *Æsculus* It may prove to be a handsome tree. It requires the common treatment of the horsechestnuts, and may be propagated by grafting on a common horsechestnut

19020 *Jonèsia Asòca.* The flowers of this tree are orange, scarlet, pale yellow, and bright orange. The Brahmins, who adore beautiful objects, have consecrated the lovely *Asòca*, which they plant near their temples, and frequently mention a grove of it in which Ravan confined the unfortunate Sita The eighth day from the new moon of Chaitra is called Asocastami.

Page 300. CLASS VIII.—OCTANDRIA. 8 STAMENS.

Order 1. MONOGYNIA. 8 Stamens. 1 Style.

2993 878*a*. *Acronýchia.* Calyx short, 4-parted. Petals 4. Stamens inserted under the disk. Style short. Stigma capitate, 4-lobed. Fruit berry-formed, nearly globose, 4-celled. Cells 1-seeded by abortion.

2994. 899*a* *Oxýspora* Calyx oblong, 4-lobed. Petals 4. Stamens equal. Anthers elongated, drawn out into 2 blunt spurs at base, with their connectives hardly perspicuous. Capsule 4-valved, 4-celled. Seeds awned at both ends.

2995. 899*b*. *Marcètia.* Calyx cylindrical, 4-lobed Petals 4, acute Stamens equal. Anthers with 2 tubercles at base, and opening by a pore at apex. Ovarium free, glabrous. Style filiform. Stigma dot-formed. Capsule 4-celled, 4-valved Seeds cochleate.

2996 899*c*. *Centradènia.* Calyx with a subtetragonal tube and a 4-parted limb. Petals 4. Anthers uniporose, the larger 2 having the connectives drawn out into an elongated clavate spur, and those of the smaller ones into a gland-formed appendage. Ovarium 4-celled, many-ovulate, with a single whorl of hairs at top Style short. Stigma capitate. Seeds echinated

2997 903*a*. *Zauschnèria* Calyx with a tetragonal tube and a 4-parted limb Petals 4, inserted in the throat of the calyx, regular Stamens exserted Ovarium 4-celled, many-seeded Style filiform Stigma 4-lobed.

2998 909*a* *Lagétta* Flowers hermaphrodite or dioecious Perianth coloured, tubular Limb 4-cleft Throat hispid. Stamens inserted in two series in the upper part of the tube, enclosed. Stigma capitate, emarginately 2-lobed Drupe covered by the baccate villous perigone, 1—3-seeded. Putamen crustaceous

History, Use, Propagation, Culture,

2993. *Acronýchia Cunninghàmii* is a tall handsome evergreen shrub, a native of Moreton Bay. The flowers at first sight have a good deal the appearance of those of the orange, as well as in the odour; but it is combined with the aromatic warmth of ginger. The foliage emits a turpentine smell when bruised from the numerous pellucid glands

2999 910*a*. *Edgwórthia*. Perianth 4-parted Hypogynous scale 1 emarginate. Stamens inserted in 2 series. Ovule solitary Stigma elongated, subulate. Nut fibrous

3000 916*c*. *Bugmvillæ'a*. Involucrum 3-leaved, with a flower springing from near the base of the midrib of each leaf Perianth tubular, 5-toothed. Stamens enclosed Stigma undivided. Achenia angular, hard. Fruit 1-celled.

Order 2. DIGYNIA. 8 Stamens. 2 Styles.

3001 919*a* *Geissois*. Calyx 4-parted, deciduous Petals wanting Style 1. Stigmas 2. Capsule compressed, 2-celled, 2-valved. Cells many-seeded Seeds compressed, winged

Order 3 TRIGYNIA 8 Stamens. 3 Styles.

3002 921*a* *Sarcogònum*. Flowers polygamous Styles 3, or Style 3-parted Stamens 8. Perianth baccate Berry white, juicy Nuts angular.

3003 921*b* *Fagopỳrum* Perianth 5-cleft, equal, shorter than the achenia when mature. Hypogynous glands 8, hemispherical, alternating with the stamens Anthers versatile Styles 3, long. Stigmas capitate Achenia large, triquetrous Seed free.

Order 4 TETRAGYNIA. 8 Stamens. 4 Styles

3004 932*a* *Loudònia*. Calyx 4-toothed, superior. Tube tetragonous, verrucose Petals cucullate, imbricate in æstivation Stamens 8 Anthers linear. Disk none Ovarium 1-celled, biovulate Ovules pendulous Styles 4 Stigmas roundish, discoloured.

MONOGYNIA.

9020 Root tuberous, Lvs of 5—6 glaucous linear-lanceolate leaflets Petioles long twisted, Peduncles 1-flwd, Upper 2 Petals obcordate, lower 3 smaller spatulate emarginate Spur large

19021 Lvs peltate 5-lobed, Segments acute, Stipules jagged, Peduncles long twisted, Petals cuneate, 2 upper smaller sessile, 3 lower unguiculate, all jagged and ciliated, Spur subulate straight

19022 Lvs peltate 5—7-lbd, Lbs rndish quite ent ,Pet denticulately ciliated length of cal , Sep appendiculate at base

19023 Pd , Lvs orb. obsc lbd pelt glauc. ben , Lbs muc , Pet. obov 2up ent 3 low smllr tthd fringd at base on lng clws

19024 Lvs pelt. glab ben. slght 5-lbd, mid. lobe muc., Fl axil sol pend Pet spat serr , 3low. on lng clws 2up ses

19025 Pd , Lvs subpelt , Lflts 6 obl. obov. obt on short pet Ped long, Pet obcord 2-lobed, upper smaller, Spur long

19026 Root tuberous, Lvs deeply cut peltate roundish, Leaflets 5—6 obovate, Petals obcordate twice as long as calyx

19027 Leaves peltate suborbiculate 7—9-lobed, Lobes callous at tips, Petals nearly equal, 2 lower ones cuneate fringed at top, 3 upper ones spatulate fringed at base, Spur long [subbuccinate, upper two lined with red

19028 Leaves peltate suborbiculate 5-lobed, Lobes obtuse or retuse mucronate, Petals obovate nearly equal truncate

19029 Rad. downy, Lvs pelt. triang ovate sin., Petı hairy, Peduncle axil twisted, Spur straight Pet. wedge-shpd tthd

19030 Glab , Lvs pelt. obl. triang deep green, Ped axil at top of branchs, Spur long orange tip by green, Pet cun tthd

19031 Root tuber , Lvs subpel cord 5-lbd, Flws umbel , Cal cylin d , Pet spat ac , 2 up scale frnd, Spur curv obt

19032 Root tuber., Stems ascending not climbing, Lvs numerous, 5—10-lbd, Lbs obl or obov glauc , Pet obt entire

19033 Root tuberous, Leaves peltate deeply 5-parted, Lobes linear-lanceolate obtuse, Petals cuneated nearly equal spreading 2-lobed, Spur short conical

19034 Branches angular glabrous, Leaves pinnate, Leaflets 5 oblong-lanceolate obtuse, Peduncles umbellate hoary, Petals hoary, Anthers mucronate

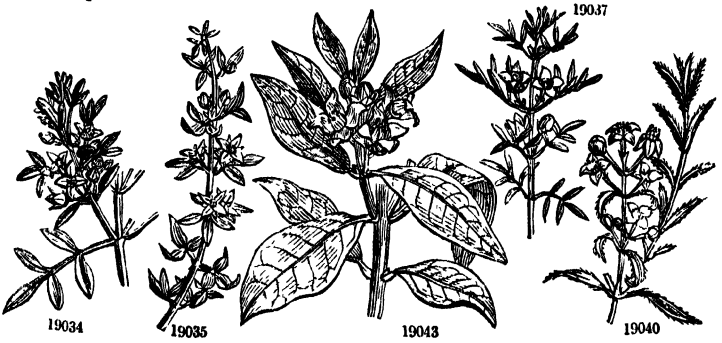
19035 Leaves ternate with revolute edges hoary-tomentose from stellate hairs beneath

β Leaflets oval

19036 Leaves ternate, Leaflets linear revolute downy beneath, Peduncles axillary 1-flowered

19037 Lvs pinnate 4—5 pairs, Leaflets linear obtuse smooth, Branches pilose Ped short 1-flowered, Flws tetrandrous

19038 Lvs obovate mucronate crenulated, Pedicels axillary and terminal 1-flowered, Filaments blunt glandular at tips



19039 Brnchs dichot slend flex., Lvs. lin obt. flat nar. at base, longer than internds, Fls axil on short peds, Fil vill

19040 Leaves linear retuse denticulated mucronate, Peduncles corymbose, Filaments blunt and glandular at tips

19041 Brnchs comp. rough when young, Lvs short rndish obo , but nar. and spat on later brnchs, Fls small term cym

19042 Glabrous, Lvs simple terete obtuse dilated at base sulcate, Cymes many flowered on long peduncles, Filaments hispid [at base

19043 Leaves oblong smooth acute at both ends, Cymes axillary, Filaments fringed all nearly combined into a tube

and Miscellaneous Particulars

with which they abound. The genus is nearly allied to *Cymnósma*. It grows freely in any common soil, and is readily increased by cuttings in the ordinary way.

History, Use, Propagation, Culture,

879. *Tetrathèca* is a genus of delicate greenhouse shrubs, gay with pretty blossoms. They will grow freely in a compost of peat, loam, and sand in equal proportions, and if a few potsherds are mixed with it so much the better. In summer plenty of air should be given, and shade in sunny weather. In winter they should be placed in some airy part of the greenhouse where they will be secure from damp. Fire heat should not be applied except to keep off frost. They are propagated by cuttings in the usual way.

19052. *Amyris toxifera* is a large tree with pinnate leaves. The fruit hangs in bunches; they are pear-shaped, and of a purple colour. The juice distilled from the trunk of the tree is as black as ink, and the inhabitants of Carolina believe it to be poisonous. It is called Janca tree and White Candlewood; and the wood is said to be valuable as timber, it bears a fine polish and has a pleasant smell. The fruit has much the taste of balsam of Copaiba.

19044 Branches tomentose sometimes setose, Leaves oblong scattered or opposite tomentose beneath hispid above, Peduncles setose or scabrous, Flowers pentamerous

19045 Branches slender downy, Leaves linear in whorls acute hairy, Peduncles axillary hairy, Petals cordate-ovate [axillary corymbose, Anthers scabrous beaked, Flowers pentamerous

19046 Branches hispid from red bristles, Leaves oblong linear revolute scabrous above tomentose beneath, Peduncles
19047 Glab or a little pil at base, Lvs ov.-obl or roundish verticil or scat shorter than internodes, Flwrs pentamerous
19048 Glabrous, Branches rush-like, Leaves linear deciduous many deficient, Peduncles scattered length of corolla, Petals obovate, Flowers pentamerous [Cal. truncate

19049 Clothed with stellate down, Lvs cordate-ovate obtuse undulated at length glabrous, Flwrs solitary pendulous,
19050 Leaves spreading elliptic or oblong glabrous above clothed with rusty tomentum beneath as are the branches, Flowers 1—3 terminal cylindrical, Stamens much exserted

19051 Leaves glabrous obovate spatulate obtuse coriaceous entire with revolute edges glaucous beneath, Peduncles axillary by threes or fours, Calyx 8-parted, Corolla biseriate, outer series 10- inner 8-parted all entire

19052 Leaves pinnate, Leaflets 5—7 stalked ovate subcordate acuminate, Racemes simple about the length of the petioles

19053 Glabrous, Leaves imbricate in 4 ranks obovate acute dotted immarginate on short petioles, Stamens 10, Flowers solitary or twin in the axils of the upper leaves on short pedicels

19054 Leaves in fascicles fleshy glabrous channelled above, Flowers dioecious glomerate, female ones solitary much shorter than leaves, Fruit 3-winged [Flowers erect, Petals obovate, Stamens 10 fertile

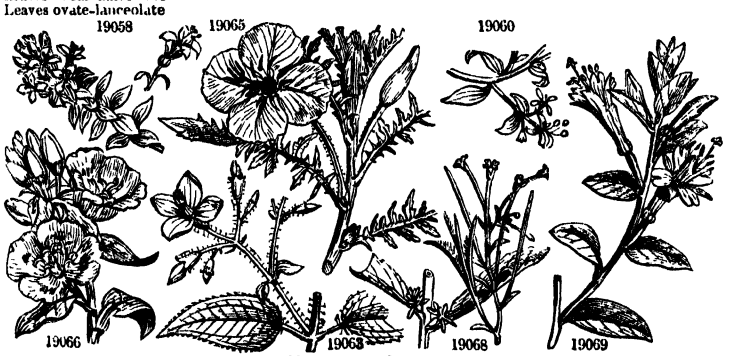
19055 Erect, Lvs cordate-ovate obtuse tubercled hoary beneath, Panicles terminal and axillary, Bracts ovate caducous,
19056 Erect hispid, Lvs ovate-lanceolate 3-nerved, Flwr terminal pedunculate, Segs of Calyx ovate-lanceolate ciliated,
β Flowers white [Hairs of Tube branched, Petals obtuse ciliated, Stamens 8

19057 Subscandent, Branches pendent, Leaves subcordate-ovate acuminate crenulated ciliated tomentose beneath as well as branches and petioles, Panicle elongated nutant [pedicellate disposed in a leafy raceme

19058 Suffruticose much branched, Lvs nearly sessile oblong obtuse mucronate downy 3-nerved, Flowers axillary
19059 Suffruticose branched, Leaves sessile ovate rather cordate entire 3-nerved downy as are the branches and calyxes, Flowers axillary pedicellate, Lobes of Calyx lanceolate subulate

19060 Leaves ovate-lanceolate unequal-sided, Racemes subcorymbose terminal [bristles at edges downy on veins beneath, Cymes trichotomous, Petals obovate

19061 Stem and branches tetragonal covered with bristly hairs, Leaves triple-nerved petiolate ovate acute with stiff
19062 Branches straggling hoary, Leaves unequal-sided petiolate acuminate bristly at edges pale beneath and downy on the veins, Flowers few terminal, Petals obovate



19063 Branches tetragonal beset with glandular hairs, Lvs ovate-cordate acute 5-nerved serrated, Cymes loose terminal few-flwd, Calyx glandular, Spurs of Anthers bifid [or bracts cordate, Capsule cylind sulcate hairy

19064 Erectish branched a little hairy, Lvs semi-amplexicaul toothed a little, lower ones ovate-acuminate, upper ones
19065 Branched downy, Lower Leaves elliptic entire or few-toothed, upper ones sharply toothed and divided at base, uppermost ones pinnatifid, Tube of Flwr long, Petals large crenul. [yellowish, Fruit lin 4-fur. terete downy

19066 Erect, Lvs lanc. a little toothed green smoothish, Tube of Calyx obconical shorter than segs, Lobes of Stigma
19067 Branches short crowded, Leaves glaucous lanceolate entire glabrous, Flowers sessile, Petals obcordate, Fruit oblong 8-furrowed terete villous

19068 Lvs lanc stalked irregularly toothed, Stem obsoletely angular, Stigma slightly lobed, Barren shoots none [part, Flowers axillary solitary drooping, Petals obcordate

19069 Glaucous, Lvs linear sessile slightly toothed opposite on the lower part of the stem and alternate in the upper
β Leaves linear-lanceolate
γ Leaves ovate-lanceolate

and Miscellaneous Particulars

2994 *Oxyspora* The species of this genus are small shrubs of considerable beauty when in blossom. A compost of loam, peat, and sand will suit them, and they may be propagated by cuttings in the usual way. They require a moist atmosphere.

2995 *Marcetia* is nearly allied to *Oxyspora*, and may be treated in the same manner with regard to both cultivation and propagation.

2996 *Centradenia*. Pretty soft-wooded plants, which thrive best in sandy peat with a little loam, and cuttings strike freely

2997 *Zauschneria* These are pretty glaucous plants with bright scarlet flowers. They may be grown in pots as ornamental plants for the greenhouse or conservatory. They also answer well for flower-beds or borders: the root creeps like French willow in a light dry soil.

History, Use, Propagation, Culture,

2998. *Lagétta lintearia* is the famous Jamaica lace-bark tree Many persons have seen this beautiful substance but few have seen the living tree, for it was not until 1844 that it was introduced permanently to our hothouses, and then only through Mr Wilson, curator of the Botanic Garden at Bath in Jamaica, to Kew Gardens, where it flowered and fruited in the autumn of 1849 It is well known that the liber or inner bark of this tree consists of layers of reticulated fibre, exactly resembling well prepared lace, and its nature is best exhibited by taking a truncheon from a branch and tearing down the bark and separating it by hand into as many layers as that portion of the tree is years old. The ladies of Jamaica, Lunan observes, "are extremely dexterous in making caps, ruffles, and complete suits of lace with it" In order to bleach it after being drawn out as much as it will bear, they expose it stretched to the sun shine and sprinkle it frequently with water It bears washing well with common soap, and acquires a degree of whiteness equal to the best artificial lace The wild negroes have made apparel from it of a very durable nature, but the common use to which it is applied is rope-making The Spaniards are said to have worked it into cables It was also made into negro whips in the days of slavery The tree grows in marly limestone hills where there is not a particle of earth to be seen. In this country, according to Mr John Smith of Kew Gardens, it is best grown in good yellow loam mixed with a little leaf mould and sand It is difficult to propagate, and is most likely to succeed according to the same authority by layering. The tree is deciduous in its native country, but in our hothouses it becomes evergreen.

19070 Stem prostr. radicant, Lvs opp. ternate a little toothed purplish beneath, Stip. fleshy, Ped. solitary axil. 1-flwd, Seg. of Cal. acum. twice the length of petals, Pet obcord. [lanc.-acum. twice as long as cuneate pets
19071 Subscand. pubes., Lvs opp. obl or ov.-lanc scarcely toothed, Stip memb , Ped. axill. sol. 1-flwd, Seg. of Cal
19072 Downy, Lvs opposite or ternate on long petioles ovate-cordate denticulated acuminate, Peduncles filiform axillary solitary 1-flwd, Segm. of Calyx triangular longer than petals [obov petals

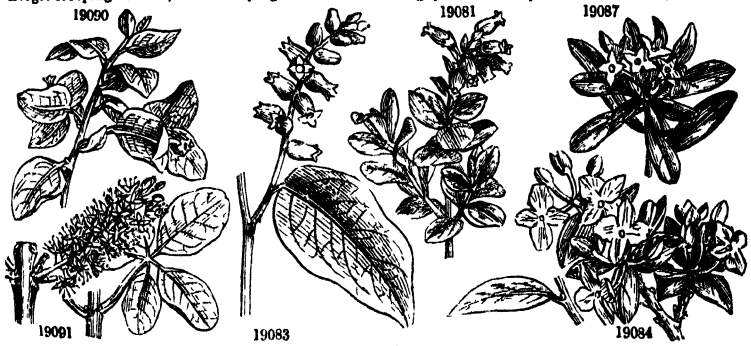
19086 Flws rising with the leaves, Lvs lanceolate acuminate purple glabrous, Flws growing in little branched cymes

19087 Hairy green, Lvs obovate obtuse shining above glabrous, Flws terminal sessile silky tomentose

19088 Leaves oblong-lanceolate pilose on the ribs beneath, Flowers capitate, Tube of Perianth clavate clothed with silky villi

19089 Glabrous, Leaves large coriaceous oblong acuminate, Spikes short dense-flowered, Flowers small decandrous, Calyx downy, Petals obovate obtuse, Stamens twice the length of calyx



19090 Spiny, Leaves ovate obtuse hairy, Pedicels united to midrib of bracts, Bracts oval purple, Perianth yellow

DIGYNIA.

19091 Leaves opposite petiolate quinate, Leaflets elliptic obtuse quite entire downy beneath, Stipules undivided ribbed caducous, Racemes axillary many-flwd

TRIGYNIA.

[Flowers octandrous digynous
19092 Leaves triangular tapering acute, Ochrea cylindrical truncate glabrous, Racemes axillary shorter than leaves,
19093 Glabr , Stem shrubby flex. slndr, Lvs small rndsh petiol. subcord ent., Racs short axill term , Fl polyg dicc
19094 Evergreen creeping glabr., Lvs oblong-lanc. narrowed at base serrulated, Spikes terminal solitary interrupted
19095 Evrgr. creeping ascend , Lvs ov taperg to both ends shining quite entire, Spikes elong slender, Lwr Fl remote

and Miscellaneous Particulars.

2969 *Edgworthia* is a half-hardy shrub, and grows freely in a compost of sandy loam and one of turfy peat with sufficient drainage, for although it requires an ample supply of water while growing during summer it is liable to damp off in winter, and for a few weeks at this time it requires little water The flowers being sweet-scented and the plant of free growth, it may be expected to prove a useful addition to our greenhouses.

9000 *Bugmvilla'a* is a fine stove climber, suited for training upon trellis-work or pillars The purple bracts are the principal feature of the plant A compost of sand, loam, and turfy peat answers it well, and cuttings strike root freely in the ordinary way.

000 *Geissois* This plant being so recently introduced, very little is known of the manner in which it should be cultivated The flowers are a bright crimson and grow in long dense racemes

19096 *Polygonum cuspidatum* is said by De Vriese to be the handsomest of all the species *P. Brunonis* and *P. vaccinifolium* are well fitted for ornamenting rockwork *P. complexum* is a small round-leaved climbing species, well fitted for covering pillars in a conservatory or greenhouse and is probably a species of *Sarcogonum*. From *P. chinense*, but more particularly *P. tinctorium*, indigo is prepared in China Which last is cultivated extensively in Belgium as a substitute for the true indigo, and is said to produce the dye in great abundance and of the finest quality

History, Use, Propagation, Culture,

3002. *Sarcogònum.* A climbing plant of the most easy culture. It will grow in any light soil, and is readily increased by cuttings or berries.
3003. *Fagopýrum cymosum* is a pretty plant of the most easy culture. It will grow in any common garden soil, and may be increased by dividing the roots or by seeds.
3004. *Loudònia.* This is a pretty shrub, with corymbs of golden yellow flowers. A compost of sand, loam, and peat will probably suit it well, and cuttings will strike root in the ordinary way.

19096 Lvs broad-ov. hardly cord., Stem rnd hollow spotted with purple, Stipules obliq trun. purple, Pan. axill. divar.
19097 Half-shrubby forming a bush, Lvs lanceolate pale green acuminated hairy, Panicles d nse terminal
19098 Erect, Lvs radical on long petioles cordate-ovate acuminate crenulate and entire, upper leaves stem-clasping, Spikes elongated many-flowered, Bracts ovate-acuminate imbricate, Stamens exserted
19099 Lvs ovate-lanceolate stalked bearded along the midrib, Heads of Flowers small, Flowers small fle hy succeeded by black succulent berries
19100 Stems numerous, Stipules membr., Lvs ovate entire glabr. thick fleshy, Spikes long branched, Style semibifid

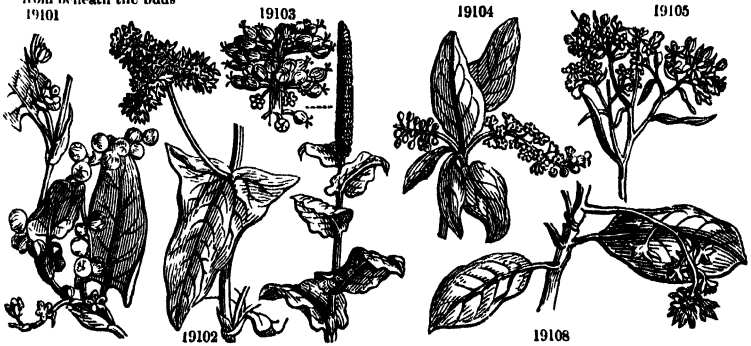
19101 Glabrous, Stems twining or prostrate terete, Lvs cord.-acuminate crenulated with scabrous edges, Racemes axillary or terminal, Bracts and achenia naked

19102 Root stoloniferous, Lower Lvs triangular cordate or hastate with bluntish lobes, upper lvs oblong or lanceolate-sagittate, Panicles on long peduncles nearly leafless dichotomous or trifid

19103 Glabr , Stem simple, Lvs cordate-ovate acute sessile stem-clasping bullate veined, Ochrea large inflated, Racemes dense spicate elongate simple terminal, Flws copious, Perianth 4—6-lobed, Stamens 8—12
19104 Lvs ovate-lanceolate obtuse tapering into the petioles, Racemes nutant, Flowers decandrous

TETRAGYNIA.

[Panicles terminal corymbose, Upper bracts petaloid obovate
19105 Glab , Stem erect terete simple leafy at base sometimes leafless at top, Lvs alternate coriaceous quite entire,



4 series the 9 outer ones fertile, 3 inner ones sterile , these last are furnished with twin sessile subglobose glands at both sides Anthers ovate, membranous at tips Style thick. Stigma capitate Ovarium 1-celled, 1-seeded
.006 9 4*a* *Oreodáphne* Hermaphrodite dicecious or polygamous Perianth 6-parted Stamens 9. Anthers oblong narrowed into the filaments, 4-celled , cells placed by pairs one above another three of the inner anthers reversed Berry more or less immersed in the tube of the perianth, which becomes a thick cup.

MONOGYNIA.

19106 Lvs alternate crowded, Buds stipitate 2-valved, Panicles terminal contracted

19107 A large tree growing about Santa Cruz

19108 Lvs elliptic or oblong-elliptic reticulated blistered above, Racemes few-flowered axillary and terminal rising from beneath the buds

and Miscellaneous Particulars.

3 05 *Agathophýllum.* This is a tree not much known. It will require to be grown like other stove plants. It will propagate by cuttings. It is called Madagascar Nutmeg
1906 *Oreoddphne* This tree will only require the treatment usually given to greenhouse plants. *Oreodáphne bullàta* is called *stink hout* or stink-wood ; and the greatest part of the timber used in building, and indeed for every other purpose, in South Africa, consists of the *giel hout* (yellow wood, a species of *Podocárpus*) and the *stink hout*. Our plant is said to produce a handsome wood resembling mahogany both in colour and quality.

Page 338. CLASS X.—DECANDRIA. 10 STAMENS.

Order 1. MONOGYNIA. 10 Stamens 1 Style.

3007 948*a* *Ammodēndron* Calyx 5-cleft, subbilabiate, at length reflexed Wings and dipetalous keel equal and connate Legume flat, membranous, 1 seeded by abortion, samaroid, margmate by a wing. Seed reniform, compressed.

3008 949*a* *Dichovēma* Calyx campanulate, bilabiate. upper lip bifid, lower lip tripartite. Corolla with a broad bilobed standard, much exceeding the small wings keel straight, obtuse, a little shorter than wings Stamens uniform Ovarium sessile, many-ovulate, somewhat 2-celled from the suture being inflexed Style uncinate, bearded on the under side. Stigma capitate

3009 953*a* *Jansònia* Calyx bilabiate · upper lip bifid nearly to the base, lower lip much longer, tripartite Corolla with an ovate-lanceolate reflexed standard, which is shorter than the elliptic wings keel compressed longer than wings Stamens unequal Ovarium villous, substipitate, 4—5-ovulate, the stipe surrounded by a little sheath Style elongated, incurved at top Stigma small.

3010 978*a* *Coultèria.* Calyx turbinate, 5-cleft, the lower lobe the largest, and pectinately toothed with glands Petals 5, upper one the largest Stamens bearded at base, and with a nectariferous gland on the upper side of the ovarium Style short Stigma glandularly ciliated Legume flat, spongy, hardly dehiscent, but usually divided transversely into cells, 4—6-seeded

3011 987*a* *Cupània* Calyx 5-cleft, or 5-parted. Petals 5, each furnished with a small scale above the base inside Disk regular, occupying the bottom of the calyx, entire or crenulate Stamens sometimes 9—5, inserted between the edge of the disk and ovarium Style bifid or undivided Capsule pear-shaped, 2—3-seeded, 2—3-valved, 2—3-celled Seeds erect, arillate

3012. 989*a*. *Turræ'a.* Calyx 5-cleft. Petals 5, long, strap-shaped Stamens combined into a very long tube, which is 10-cleft at apex, with an anther seated at the base of each lobe or between them Stigma thickish Capsule 5-celled Cells 2-seeded: Valves with a dissepiment in the middle of each

3013. 989*b* *Munrònia.* Calyx 5-cleft Segments linear Petals 5, bound together by the claws. Stamens combined into a tube, ending in 10 subulate segments, and bearing an equal number of anthers inside. Ovarium downy, 6-celled. Cells 1—2-seeded. Stigma obscurely 5-lobed

3014 999*c* *Acradenia* Calyx 5-parted. Petals 5, velvety. Stamens glabrous, about equal to corolla. Anthers glabrous, mappendiculate Carpels 5, cohering, seated on a fleshy lobed gynobase, villous, each bearing a smooth sessile fleshy gland at its upper angle. Ovula 2 in each cell, collateral, pendulous Style long, length of stamens Stigma slightly capitate.

3015 999*d* *Diplolæ'na* Involucrum double, outer one 5 parted, inner one 10—15-parted many-flowered Flowers sessile, furnished with a 5-leaved chaffy calyx and a 5-petalled corolla Stamens exserted Filaments fringed. Style 5-furrowed Stigma 5-lobed Fruit of 5 distinct, 2 valved, 1-seeded carpels. Seeds oblong

3016 999*e* *Bieberstæ'nia* Calyx 5-parted, irregular Petals 5, twisted in the bud Stamens subulate, the 5 shortest opposite the petals, the alternat 5 furnished each with a scale on the outside at the base Anthers axillary Ovaria 5, distinct at the apex, but connected at base Styles 5 Carpels 1-seeded, arillate inside

3017 1012*a* *Ammyrsìne.* Calyx deeply 5-parted Petals 5. Stamens exserted Anthers opening by two terminal pores Capsule 5-celled, 5-valved, dehiscing at apex

3018. 1014*a* *Bryánthus* Calyx 5 leaved Corolla 5-parted. Filaments flattened, glabrous Cells of Anthers short, mutic, or awned behind, each dehiscing by a terminal pore. Stigma obtuse Capsule 5-celled, with a septicidal dehiscence

3019 1016*b* *Thibaúdia* Calyx urceolate, 5-lobed Corolla tubular, coarctate at apex, 5-lobed. Stamens inclosed Filaments short, dilated Anthers 2-celled, shortly spurred at base, and drawn out into 2 tubes at apex cells or tubes parallel, dehiscing lengthwise by a linear fissure Style pentagonal Stigma large, peltate. Berry 5-celled Cells many-seeded Seeds minute, angular, dotted

3020 1016*c* *Leucóthoë* Calyx 5-leaved Corolla tubular, 5-toothed Stamens inclosed Filaments flattened, downy. Cells of Anthers short, truncate, mutic Stigma capitate. Capsule with a loculicidal dehiscence

3021 1016*d* *Lydònia* Calyx 5-parted Corolla ovate or tubular, with a 5-toothed contracted mouth Stamens inclosed. Filaments dilated, short, downy Cells of Anthers membranous, dehiscing lengthwise, mutic Style strong, pentagonal, fusiform Stigma simple truncate. Capsule pentagonal, 5 celled, with a loculicidal dehiscence Margins of valves closed by other external valves. Seeds acicular, imbricate.

3022 1016*e*. *Agarista* Calyx fleshy, 5-lobed Corolla ovate, with a contracted 5-toothed mouth Stamens inclosed. Filaments dilated, and villous at base. Anthers bipartite, with short membranous cells, which are mutic at base, and diverging at apex, each opening by a terminal pore Style strong. Stigma capitate. Capsule globose, pentagonal, 5-celled, with a loculicidal dehiscence. Placentas thick, oblong Seeds angular, curved.

3023. 1016*f*. *Gaylussàcia.* Calyx 5-cleft Corolla tubular, ventricose, 5-lobed Stamens inserted in the limb of the corolla, inclosed Anthers mutic, drawn out at top into two little tubes Stigma capitate. Drupe nearly globose, 10-celled, covered by the calyx Cells 1-seeded Seeds smooth, lenticular.

3024 1016*g* *Macleània* Calyx truncate, obsoletely 5-toothed, 5-winged Corolla cylindrical: Limb 5-cleft Stamens combined, their whole length into an urceolus. Anthers mutic behind, and tapering into a single tube at apex, which opens inwardly by a single chink Ovarium 5-celled, many-ovulate. Fruit a berry

3025 1019*b* *Arctostáphylos* Calyx 5-parted. Corolla globularly campanulate Limb 5-cleft, reflexed Stamens inclosed Filaments dilated, pilose Anthers compressed, dehiscing by two pores at apex, and furnished with 2

History, Use, Propagation, Culture,

19111. *Sophòra velutina* The flowers of this species are pale purple or red, disposed in long racemose spikes; and being very showy it would perhaps become more hardy by grafting it on *Sophòra japónica*, which would make it a

reflexed awns. Ovarium seated on a hypogynous disk, or half-immersed in it, usually 5-celled, rarely 6—9-celled. Cells 1-seeded. Stigma obtuse Drupe nearly globose

3026. 1019c. *Conarostáphylos* Calyx 5-parted. Corolla globularly campanulate Limb 5-cleft, reflexed. Anthers 2-awned at base, and biporose at apex Ovarium surrounded by a hypogynous disk. Stigma obtuse. Drupe papillose, globose, containing a 5-celled or 6—9 celled putamen. Cells 1-seeded.

3027 1029a. *Charianthus.* Calyx with an ovate tube, and a rather urceolate 4—5-lobed limb. Petals 4—5. Stamens 8—10. Anthers 2-celled, bursting by 2 longitudinal chinks. Berry fleshy, 4—8-celled, globose, umbilicate.

3028 1029b. *Meriania.* Calyx campanulate, 5—6-lobed Lobes broad at base and subulate at apex. Petals 5—6 Stamens 10—12. Anthers blunt at apex, bursting by 2 pores, and furnished with 2 short processes at base. Capsule free, 5—6-celled, with lunate placentas. Seeds small, cuneate, angular

3029 1029c *Medinilla* Calyx with an obovate tube, and a cylindrical truncate limb. Petals 4—5. Stamens 8—10 Anthers elongated, bluntly biauriculate at base Capsule baccate, 4—5-celled

3030 1029d *Heterótrichum.* Calyx ovate, globose, 4—5-cleft Lobes broad at base and subulate at apex Petals 4—8, oval. Stamens 10—12—16, equal, glabrous Anthers oblong, hardly gibbous at base, and opening by a single pore at apex Capsule baccate 5—6 celled, crowned by the calyx

3031 1029e *Lasiándra.* Calyx 5 cleft Petals 5, spreading Stamens nearly equal, the connectives of anthers biauriculate Anthers uniporose Filaments usually pilose Ovarium crowned by bristles Capsule covered by the calyx but free from it, 5-celled, many-seeded

3032 1029f *Pleróma* Calyx ovate, often involved by two deciduous bracts Petals 5, obovate Stamens glabrous Anthers nearly equal, elongated, arched at base, each furnished with a stipe-formed connective, which is biauriculate at base Ovarium bristly Capsule baccate, 5-celled, adnate to the calyx. Seeds cochleate

3033 1029g. *Bertoldnia.* Calyx campanulate, 5 lobed Petals 5, obovate Stamens rather unequal. Anthers ovate, obtuse, opening by a single pore, scarcely auriculate at the base Capsule trigonal, 3-valved, cut transversely, and therefore exhibiting the appearance of a lid. Seeds cuneate, triquetrous, scabrous

3034 1029h. *Tetraxýgia* Calyx with a globose tube and a 4 toothed limb. Petals 4, obovate Stamens 4—8—10 equal Anthers linear, obtuse at base, opening by a single pore at apex Capsule baccate, 4 celled Seeds cuneate, angular, with a linear hilum.

3035 1029i. *Olinia* Calyx bibracteate, adhering to the ovarium at base 5- rarely 4-toothed Petals 5 rarely 4, spatulate, obtuse. Stamens 5—10, inserted in the throat of the calyx under scales Anthers globose, didymous, dehiscing lengthwise Ovarium truncate, 4—5-celled Cells 3-ovulate Style subulate Stigma elongated, thickened. Berry drupaceous, containing a 3—4-celled putamen Cells 1-seeded.

3036 1029k *Eriocnêma* Calyx 5-parted, with campanulate tube and narrow simple or duplicate segments Petals 5, oblong-obovate, glabrous Stamens equal, or nearly so, uniform Anthers linear, subulate, opening by a single pore at apex, the connective not drawn out Ovarium free or adhering to calyx at base, roundish or ovate, crowned by bristles. Stigma small Valves of Capsule septiferous in the middle Flowers umbellate.

3037 1034b *Verticórdia.* Flowers girded by two free or concrete bracts before expansion. Calyx 5-lobed: Lobes palmately parted into 4—9 divisions. Stamens 20, of which ten are sterile and ligulate, and the other 10 fertile and equal. Style filiform, exserted. Stigma bearded. Fruit 1-seeded, but the ovarium contains 5—6 ovules. Seed globose

Order 2 DIGYNIA 10 Stamens. 2 Styles.

3038 1038a *Acrophyllum* Calyx 5-parted. Petals 5 Hypogynous disk small Styles setaceous. Berry globose, 2-celled Cells many-seeded Seeds minute, smooth

3039 1038b *Codia* Calyx 4—5 parted Petals 4—5 Stamens 8—10 Ovarium 2-celled, adhering to the calyx. Styles downy Capsule closed at apex, usually 1-seeded by abortion Seeds roundish, smooth, with a bony testa.

3040 1038c *Rhodolæa* Calyx minute, truncate, adnate to the ovarium at base, increasing and persistent Corolla none Ovarium with many glands at base Styles long Stigma obtuse Capsule 2-celled, many-seeded. Seeds compressed, obliquely subtriangular

3041 1043a *Hoteia* Calyx 5-parted Petals 5, spatulate. Stigma obtuse Ovarium 2-celled, many-ovulate. Carpels 2, adnate to the calyx Seeds scrobiculate, 1—2 in each cell

3042 1044a *Tunica.* Calyx turbinate Corolla salver-shaped or funnel-shaped Petals unguiculate. Flowers solitary or in fascicles Fascicles girded by a 4 leaved scarious involucrum, the central fascicle pedunculate; the lateral fascicles sessile, and girded by 2 scarious bracts at base

Order 3. TRIGYNIA. 10 Stamens. 3 Styles.

3043 1050a *Vivianía* Calyx campanulate, 5 toothed Petals 5, unguiculate, twisted in æstivation. Stamens inserted on the top of the torus. Style short, crowned by 3 linear stigmas, with reflexed edges Capsule 3-celled, 3-valved Valves separating from the axis, even to the placentas, as in *Linum*

3044 1055a *Heteropteris* All as in *Banisteria*, except the styles, which are less dilated at apex, and the wings of the carpels are thickened on the lower side, as in *Acer*, not on the upper side.

Order 4. PENTAGYNIA. 10 Stamens 5 Styles

3045 *Quillaja* Calyx 5-cleft Segments ovate, tomentose, with truncate margins Disk combined with the calyx 5-lobed, stellate, fleshy, smooth, nectariferous Lobes emarginate. Petals 5, spatulate Stamens disposed in two series Carpels 5, combined Styles free Stigmas unilateral.

MONOGYNIA.

[at base shorter than wings, Petals of keel separate longer than wings

15109 Leaflets 20 pairs elliptic-obovate smooth above and rather villous beneath, Vexillum large roundish subcordate

15110 Leaves with 13—19 pairs of elliptic-oblong obtuse coriaceous leaflets silky beneath, Racemes short axillary

15111 Leaves with 23 alternate elliptic velvety leaflets, Racemes cylindrical terminal, Petals imbricate, Vexillum bifid

3112 Leaves stalked, Leaflets rhomb-ovate cuneate rather silky pubescent beneath, Stipules obliquely ovate, Lower flowers of raceme twin

and Miscellaneous Particulars.

very desirable addition to our hardy shrubs. There was, in Kensington Gardens, some years ago, a large *Sophora*, probably the *S chinensis* Hort, very nearly related to *S. japonica*, and was possibly introduced at the same time.

History, Use, Propagation, Culture,

3007 *Ammodéndron* A native of the salt steppes in Siberia, comes near to *Halimodéndron*, of which the habital and culture are the same. Sand, loam, and peat would be a good soil for it, watering occasionally with salted water

3008 *Dichosèma* is a genus nearly related to the narrow-leaved *Chorozèmas*. The species are very pretty and require the same treatment as *Chorozema*.

3009. *Jansònia formòsa*. The nearest affinity of *Jansònia* is with *Brachysèma*, with which genus Mr. Kippist states that it agrees in its unguiculate petals, in the form and unusual length of the keel, in the extreme shortness of the standard, in its elongated filiform style, and in its shortly stalked villous germs, surrounded at the base by a minute fleshy ring, but it is abundantly distinguished by its capitate inflorescence, by the remarkable inequality of the calycine

19113 Smooth, Leaflets setaceous acute, Segments of Calyx obtuse, Bracts roundish keeled

19114 Silky, Petioles hardening into spines, Leaves bifoliate, Leaflets lanceolate silky white, Flowers purple disposed in racemes

[1-flowered, Corollas large

19115 Branches irregular slightly drooping, Leaves few sessile spatulate retuse, Peduncles very long axillary solitary
19116 Leaves nearly sessile roundish cordate undulated spiny-toothed and entire downy, Racemes erect many-flowered a little longer than leaves

β Flowers larger, orange and scarlet instead of yellow and red

19117 Leaves sessile ovate-lanc mucronulate, Flowers axillary solitary or in pairs on long peduncles, Vexillum large
19118 Lvs scattered elliptic-lanc obov. or cune. entire mucro , Rac many-flwd axil and term , Upper lip of Cal. bifid obtuse, Stigma truncate [conspicuous veins, Racemes few-flwd, Pedic. bibracteate above middle

19119 Branches downy, Lvs broadly cordate with a stiff mucrone glab undul with entire thickened marg and rather
19120 Leaves a little crenate oblong-lanceolate mealy above beset with adpressed hairs beneath, Flowers terminal disposed in verticillate heads

19121 Leaves lanceolate-linear entire with revolute edges, Racemes axillary and terminal many-flowered, Calyx attenuated a long way at base, Teeth hardly shorter than tube

19122 Branches hairy, Stipules roundish, Leaves linear bluntish with a thickened midrib and revolute edges, Flowers axillary pedunculate, Ovarium 6-seeded, Corolla red with a zone of crimson at base of standard

19123 This is probably only a variety of *P. trilobàtum*. It has much darker smaller and more prickly leaves, Flowers axillary orange-yellow, Keel dull red [capitate, Pedun bracteate, Bracts decid.

19124 Lvs 3—4 in a whorl or alternate bluntish with revolute edges, smooth except the middle nerve, Flws pedicellate
19125 Leaves opposite roundish-oblong coriaceous pilose beneath mucronate subcrenulate, Racemes umbellate terminal, Bracts subulate at base of pedicel, Segments of calyx reflexed, Legume villous pedicellate

19126 Leaves oblong retuse coriaceous reticulated glabrous, Corymbs axillary stalked crowded shorter than the leaves

19127 Leaves obovate cuneated mucronulate coriaceous, Racemes axillary short dense many-flowered, Calyx silky villous ferruginous, Ovarium 4-ovulate

19128 Lower leaves obovate, upper ones oblong or linear with a recurved mucrone, Racemes dense capitate few-flwd shorter than the leaves, Pods twice as long as calyx [silky, Ovarium 4-ovulate

19129 Leaves obl.-linear or cuncate retuse or emarg mutic, Racemes axillary and terminal elongate loose, Cal rather
19130 Lvs obl. linear obtuse smooth above clothed with silky tomentum beneath revolute, Corymb loose verticillately racemose, Pedicel bracteate, Calyx silky downy, Wings of Corolla reflexed. [lanc. covered with brown hairs

19131 Downy, Stipules small, Leaves lanc mucronate 6 inches long smooth above, Spikes term , Calyx seg ovate-
19132 Leaves linear elongated mucronate reticulated with revolute edges, Racemes loose terminal

19133 Leaves obovate retuse, Flowers racemose

19134 Leaves opp. rarely alternate ovate or ovate-lanc. muc entire silky white beneath, Stips minute subulate, Racs sub-compound, axillary shorter than leaves, Calyx silky, Wings and vexillum one-half shorter than the keel

19135 Erect or ascend , Lvs opp obl.-ov emarg. mucr retic. with subundulated minutely dentic margs, Stips lanc subul , Flws sessile crwdd into 4-flwd drpng heads propped by 4 decus. ov.-coriac. brown bracts silky outside

19136 Branches angular, Leaves trifoliate, Leaflets broad linear acute, Keel bearded on the edges, Vexillum ample

19137 Leaves trifoliate, Leaflets linear glabrous with revolute edges, Racemes few-flowered, Calyx segments oblong-linear cuspidate [axillary at tops of branches, Keel bearded

19138 Branches and leaves villous, Lvs pinnate, Lflts linear subulate with revolute edges, Peds solitary terminal and
19139 Hairy upright, Lvs pin. glauc , Lflts 6-8 pairs lin obt with rev edges, Flws corymb., Keel brdd, Leg smooth
19140 Stem warted, Leaves trifoliate, Leaflets linear wedge-shaped mucronate, Calyx downy inside, Keel smooth
19141 Glabrous, Stems filiform smooth, Leaflets 3 linear-muc. with revolute edges, Flowers solit. pedunculate, Vexil emarginate twice the length of beardless keel [smooth above, Calyx hairy, Keel ciliated

19142 Pilose, Flowers capitate, Leaves impari-pinnate 3—4 pairs sometimes subpalmate, Leaflets linear subulate muc.

and Miscellaneous Particulars

segments, by the much greater length of the claws of the petals, and by the paucity of its ovules, which do not appear to exceed six in number. Mr. Kippist also compares it with *Leptosèma* Benth , which is clearly distinguished by its bibracteate calyx, composed of two nearly equal lips, the uppermost of which is slightly bifid, its scarcely unguiculate vexillum ; its wings about equal in length to the keel ; the distinct inflexion of the carinal suture, as well as by its inflorescence : that of *Leptosèma* being a densely crowded raceme, while in *Jansònia* the flowers are perfectly sessile, and arranged in a verticillate manner round a common axis, which is slightly prolonged beyond the point from whence the flowers spring in the form of a short mucrone The culture recommended for *Brachysèma* (p 342) will answer for *Jansònia* also.

History, Use, Propagation, Culture,

19177. *Daviesia physodes.* In Bot mag it is said that Mr. A. Cunningham has not mentioned the fruit in the character given. The truth is, that Mr. A Cunningham had nothing to do with the description given of the species

19143 Lvs sess. or on short petioles linear-subul. stiff mucron with revol. edges, Flws in the axils of upper lvs, Calyxes
19144 Lvs oblong-linear muc. retic. tapering a long way at base flat, Racs loose term. [long-awned, Keel ciliated
19145 Leaflts 3 linear-lanceol. veiny mucronate with revolute edges, Stipules longer than petioles, Peduncles subterminal solitary bibracteolate, Corolla longer than calyx
[lose inside
19146 Branches puberulous, Leaflets glabrous linear mucronate, Peduncles axillary bibracteate, Margins of calyx pi-
19147 Villous, Leaflets linear-subulate bluntish mutic scabrous from dots, Pedunc axillary bibracteate, Flowers large
[teral loosely racemose, Legume stipitate ventricose
19148 Branches loosely divaricate alternately branched, Branches angular spinescent at top smoothish, Flowers la-
19149 Phyllodineous branches oblong cuneated at base sinuately toothed quite glabrous veiny, Flowers racemose, Calyx silky longer than Corolla, Legume stipitate
19150 Branches terete, Tube of Calyx much shorter than lips, Keel oblong longer than vexillum subulately mucronate at apex, Style strght at base incurv. at apex
[1—3 together pil like calyx, Upper lip of cal. trunc. emarg
19151 Brnchs slend. nearly glab., Lvs scat. or nearly op. lin obt or mucron. convex abve with revol edges, Peds ax.
19152 Leaves narrow deep green pointed, Racemes dense-flowered, Flowers yellow with a few streaks of crimson
19153 Leaves ternately verticillate cordate-lanceolate mucronate with revolute wavy edges, Flowers verticillate
19154 Branches pilose stiff spreading, Lvs scattered or somewhat whorled stalked linear acute slightly scabrous little hairy, Veins prominent, Peds in twos or threes axil, Calyx pilose, Teeth of lower lip reflexed
19155 Lvs numerous sessile linear mucronate, Flws in clusters near ends of branches, Vexillum broad rather reniform
19156 Lvs linear twisted acute scabrous numerous, Branches scabrous, Corymbs terminal sessile
19157 Leaves terete obtuse hispid scab from the tubercles after the hairs have fallen, Corymbs terminal pedunculate few- or dense- flowered, Calyx downy
19158 Leaves scattered or verticillate acicular pungent with revolute edges, Peds few-flwd axillary crowded, Branches canescent, Ovarium villous
19159 Loosely branched, Leaves opposite or tern coriaceous mucronate veiny, Flowers axillary tern, Bracts minute
[illary few-flowered, Calyx villous, Ovarium sessile villous
19160 Branches villous, Leaves tern ovate acute mucronately pungent entire adult ones glabrous, Racemes short ax-
19161 Leaves nearly sessile opposite smooth heart-shaped, with equidistant spiny teeth, Flowers in clusters at end of shoots
[gins, Racs elongated terminal villous as are the calyx and ovary
19162 Velvety, Leaves tern nearly sessile cuneate-oblong or subbilobed mucronate with revolute subcrenulate mar-
19163 Branches glab, Leavs opposite or tern lanc. or oblong muc entire glauc., Racemes axillary and terminal loose few-flwd, Calyx large, Upper lip broad bifid, Ovary stipitate villous
[minal scaly, Ovary stip. vil
19164 Villous while young, Lvs opposite elliptic mucronate at length glab above, Stips large triangular, Racs ter-
19165 Lvs 4 in a whrl, rthr silky ben. cun subemrg muc., Racs term lfless, Flws whrld, Two upper tth of cal coher
19166 Villous, Lvs opp ov.-lanc. cord obt. mucr. undul., Bracts brown lanc, Ovarium stipit vil, Racs term axil
19167 Tomentose while young, Leaves 3 in a whorl oval or roundish mucronate glabrous above, Racemes axillary capitate, Bracts dark brown, Ovaries nearly sessile villous
19168 Leaves cuneate-oblong retuse rather silky beneath reticulated with a deciduous mucrone, Heads few-flowered
19169 Lvs op or scat. obov cun. acute muc. entire, younger ones and branches silky, adult ones glabrous, Racs axil-
lary dense few-flowered, Calyx silky, Upper lip bifid
[ther loose, Calyx downy
19170 Branches slender, Stips setaceous, Leaves tern lanceolate mucronate retic glaucous, Racs axil. and term. ra-
[many-flwd, Floral stips imbric connate by pairs into trifid bracts ciliated, Calyx bilab ciliated
19171 Brnchs downy, Stips persistent erect, Lvs scattered subterete with involedges mut glab., Heads term dense
19172 Peduncs axil twin elongated, Stips set, Leaves lin lanceol flat clothed with adpressed hairs as are branches, Heads at first terminal and then lateral, Bracts 2 longer than calyx
[ers crowded in heads
19173 Branches tomentose, Lvs scattered linear involute minutely tubercled ben hairy mucr, Stips subulate, Flow-
19174 Brnchs beset with loose silky hairs, Stips persist, Lvs on short petioles obl.-lin with rev pilose edges, Heads term leafy, Floral stips con by pairs forming brown membr trifid. brcts, Cal. bilab, Keel shorter than wings
19175 Flowers axillary and racemose, Leaves cuneated linear obtuse glauc glab, Stipules and bracts small, Calyx like that of *Euchilus*
[in the adult state reflexed, Stips lin, Branches villous
19176 Flowers sessile solitary axillary, Leaves ovate-acute pungent villous beneath when young, but only on the edges
[mucronate, Keel subrostrate shorter than wings
19177 Glaucous erect, Leaves linear terete upper ones verticillate dilated towards the points hatchet-shaped 2-nerved
[ered shorter than leaves bracteate at base, Branches incurved twiggy
19178 Leaves spatulate lin nerved apic. by a soft mucrone with a thickened edge, Racs axillary solitary about 4-flow-
19179 Glab. Branches erectish, Lvs terete striated linear-subulate stiff spinescent at top, Brnchs 4—5 times shorter than leaves, Keel obtuse
[flowered equal to the leaves
19180 Glabrous, Branches angular, Leaves linear oblong subfalcate spinescent short thick substriated, Racemes many-
19181 Glab, Branches terete striated or angular leafless, Florif. brnchs mutic min. bracteate, Sterile ones bi-trichot. spinescent at top, Racs term, Calyx bilabiate, Upper lip broad truncate, Lower one acutely tripartite
19182 Glab glauc, Brnchs terete, Lvs obl. 4-sided flat vertical fixed by the lower angle, inner angle rounded, outer angle spinescent, Spine of upper one tending upwds of lower one downwds, Racs many-flwd longer than lvs

and Miscellaneous Particulars.

The species are all pretty when in blossom. Like all leguminous shrubs, they make better plants when raised from seed than by cuttings.

History, Use, Propagation, Culture,

3010. *Coultèria.* The species are very showy when in flower. Their culture is the same as recommended for *Cæsalpínia*, p. 350. No 979 The wood of *Coultèria tinctòria* is used in dyeing.
3011. *Turræ'a* A mixture of loam, peat, and sand will suit the species, and ripened cuttings will grow in the usual way Their culture is the same as for any ordinary hothouse plant.
3012 *Munrònia japónica* is a small bush with pinnate leaves. It thrives with the culture and treatment of any ordinary stove shrub All of the plants belonging to the same natural order are trees of considerable size
3013. *Cupánia Cunninghámi* is a large timber tree, with ample pinnate leaves. A light loamy soil suits it best, and ripened cuttings will strike root, planted in the usual way
3014. *Acradènia* is a genus nearly allied to *Zièria*, both in habit and character. It is a pretty shrub, with snowy white conspicuous flowers and trifoliate leaves. A compost of sand, loam, and peat will suit it, and cuttings will strike root if treated in the ordinary way. In fact, the culture of *Zièria* will answer for *Acradènia*
3015. *Diplolæ'na.* A pretty, as well as singular, greenhouse plant, with drooping heads of flowers. A compost of loam, peat, and sand suits it well, and it is propagated by cuttings.

19183 Lvs linear-lanc. strongly nerved obtuse and mucronate coriaceous smooth, Peduncles few-flowered axillary
19184 Leaves cordate stem-clasping reticulated, Peduncles axillary aggregate corymbose many-flowered

[verticillate
19185 Branches villous, Leaves linear mucronate with revolute edges, Flowers numerous and appearing as if they were
19186 Leaves small fan-shaped narrowed on the short petioles deeply multifid at top, the segments spiny

19187 Leaves opposite spatulate oblong obtuse subcrenate mucronate sessile silky beneath, Racemes capitate 4—5-flwd terminal, Calyx reflexed

19188 Leaves calyxes and fruit downy, Leaflets oblong retuse, Petioles unarmed, Legume stipitate obtuse

19189 Leaflets glabrous oval emarginate, Petioles armed a little puberulous, Calyxes smoothish, Legume glabrous curved obtuse

19190 Leaves alternate with 2—3 pairs of large oblong retuse rather coriaceous opposite leaflets and an odd one, Young leaves and branches covered with rusty down, Panicles terminal

[with ligulate segments, Claws of petals connate
19191 Leaves impari-pinnate with 2—3 pairs of stalked cordate-lanceolate acute entire downy leaflets, Calyx downy
19192 Leaves cuneate at base triangularly 3-lobed at top somewhat 5-lobed, Pedicels solitary axillary 1-flowered

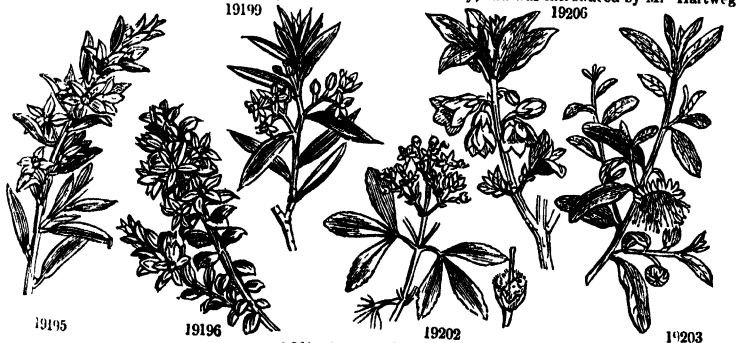
19193 Leaves elliptic acuminated stiff shining with revolute edges, Calyxes and petals smoothish

19194 Leaves impari-pinnate with two pairs of nearly opposite leaflets, lowest pair nearly cordate, upper pair oblong ovate, term. one much larger on a long petiole and occasionally lobed, Racs axil. few-flwd, Pedicels bibracteate

19195 Branches trigonal, Leaves ovate-lanceolate entire full of pellucid dots, Peduncles axillary 1-flowered

[Peduncles bibracteate, Filaments hispid, Petals oblong
19196 Leaves spreading ovate obtuse mucronate sessile, Branches round pilose, Flowers axillary on short peduncles,
19197 Leaves linear acute many-veined dotted, Peduncles 1—2-flowered, Petals oblong
19198 Branches downy, Leaves oblong obov glauc. mucron dotted beneath, Pedunes solitary 1-flwd, Filaments ciliated
19199 Leaves linear-lanceolate entire smooth dotted with glands mucronate, Branches round, Peduncles axillary bifid 3-flowered, Filaments a little fringed on the margin
19200 Leaves lanceolate marginate mucronate dotted, Peduncles axillary 3-flowered, Filaments bearded

19201 Leaves lanceolate entire covered with yellow rufous or silvery scales beneath, Branches angular, Peduncles axillary trifid 3-flowered, Stamens exserted



19202 Much-branched, Leaves opposite trifoliate smooth, Leaflets lanceolate serrated slightly warted paler beneath, Peduncles terminal trichotomous many-flowered, Bracts subulate

19203 Leaves oblong-ovate obtuse a little scabrous covered with stellate tomentum beneath, younger ones rather rusty

19204 Leaves pinnate, Leaflets roundish deeply toothed, Petals entire

19205 Prostrate, Leaves ovate-oblong flat smooth

19206 Lvs lanc.-acute clothed with rusty toment beneath, Limb of Cal short callous 5-lobed, Ovar toment 5-celled
19207 Not yet described that we know of, it grows in woods at Monterey, and was introduced by Mr Hartweg

and Miscellaneous Particulars.

3016 *Bucherstcinia.* This singular plant is beset with glandular hairs. It requires to be grown in pots among other alpines. It can only be increased by seed

3017 *Ammyrsine.* The species grow best in a peat border, and they may be propagated by layers or cuttings from young wood.

1014 *Rhododéndron* This genus is the most prominent in the Sikkim Himalayas and Nepal Seedlings have been reared in quantities from seed sent home by Dr. Hooker, but the plants will all probably require protection in severe weather in winter. Many of the species resemble each other in the foliage, particularly in the young state, but, nevertheless, they are distinct in the flowers and fruit, according to Dr. Hooker. They grow at elevations varying from 8000 to 16,000 feet; but it is especially between 10,000 and 14,000 feet the genus prevails, several species, comprising three quarters of the bulk of the vegetation The wood supplies the natives with fuel, and from its tough nature and property is easily worked into many domestic utensils, as spoons, bowls, &c. The bark is used like that of the birch in the arctic regions; and the leaves serve as plates and wrappers for butter, cream, cheese, &c At the elevation of 13,000 feet, the snowy mountains glow with the blood-red blossoms of the *R. fulgens*, whilst the beauty of

History, Use, Propagation, Culture,

the *R. campanulàtum*, and the great elegance and delicacy of the *R campylocárpum*, excite the more admiration from their being found in the region of fog and rain It has been insisted that many of the so-called species are of hybrid origin, but this is by no means clear, nor can it be ascertained. Some species are parasitical on trees, but these have been found growing even in clayey soil. They will readily grow in vegetable mould.

Rhododéndron ciliàtum has passed the winter in the open air, surrounded by a bank of earth 1½ foot high, but it flowered in the cool part of a greenhouse

R. javánicum is one of the most beautiful plants yet introduced; but it requires the protection of a greenhouse

19206 Leaves small ovate or obovate-elliptic pointed crenate dark green above and clothed with short shaggy woo beneath, Racemes about 5-flwd terminal, Peduncles shaggy

19209 Leaves lanceolate acute rusty beneath, Calyx woolly, Segments of Corolla 2-lobed with curled margins

β A hardy evergreen hybrid, Flowers white, two upper petals spotted

19210 Glabrous, Leaves oblong-obovate coriaceous acute lepidoted beneath, Flowers umbellate, Calyx obsolete, Corolla funnel-shaped, Segments of Limb obovate

β Flowers yellow, but in the species they are reddish orange colour

19211 Lvs like those of *Azálea* ovate-lanceolate mucronate ciliated dotted like the petioles whitish beneath and beset with scaly dots above, Flowers large white tinted with pink [Limb spreading, Bracts clammy

19212 Glandular hispid, Leaves lanceolate acuminate reticulate pilose beneath and glabrous above, Corolla reticulated,

19213 Hispid, Leaves elliptic-oblong coriac acute beset with rusty hairs ciliated lepidoted beneath, Peduncles ter-

β Flowers larger white tinged with rose colour [minal umbel. 3—6, Cor camp , Tube narrow, Limb large

19214 Leaves oblong-lanceolate acute yellowish beneath, Segments of Calyx dilated membranous, Ovarium 1-celled glandular hispid, Petioles midribs of leaves and branches bristly, Filaments glabrous, Bracts and buds viscid

19215 Lvs obl wavy rugged convex revolute covered with pale brown wool ben , Flws in heads, Peduncs woolly, Cal. obsolete, Cor cam [Cal 5-cleft, I bs unequal, Cor ample, Lbs entire, Stam 18—20 glab , Cap. 10-cld

19216 Twiggy Branches ped and under sides of lvs covered with rusty scales, Lvs ellip.-lanc acum., Peds 2—3 term ,

19217 Lvs ample obl -oval acute cordate at base pale ben , Flws large 3—5 term , Cal obscurely lbd, Cor with a campanulate tube, Limb spreading, Lbs bifid, Stam 12—18, Ov 12-cld gland , Stig disk-formed Caps cylind.

19218 Lvs amp obov -obl. ac glab silv ben , Bracts decid silky, Peds downy Cal short obsc lbd, Cor. large camp , Seg 2-lbd, Sta glab , Stig dilated [Fllms woolly at base, Cap scaly archd cylind gland 6-vlvd, Sta glab.

19219 Covd with rusty scale-like dots, Lvs spat -lanc rusty ben , Seg Cal rnd , Cor short camp lepido , Seg rndsh,

19220 Slend twig gland pil , Lvs ovate or oblong cord obt glab glaucescent ben , Heads term loose 6—8-fld, Calyx 5-lbd gland , Cor camp [Lb of Cal lobac obt , Cor camp 5-pitted at bot , Fllms pil at base

19221 Parasit slender, Bnchs remote verti , Lvs obov -ellip obt covd with rufous dots ben , Fls lge umbel 7 together,

19222 Bnchd, Lvs rndsh-ov blunt cord at base glab glauces ben, with recurv edges Corymb many-fld, Cal lge cup-shpd uneq -lbd, Cor camp , Limb spreding, Lobes emarg upper spotted, Ovar 6—10-celled cylind

19223 Lvs ampl obov -ellip obt rather cord at base glab above clthd with white tomen. ben , Heads lge 15—20-fld, Cal. obs , Cor camp , Limb short, Lbs emarg , Sta about 18 glab , Ovar downy vise 10-cld, Cap cyl tomen

19224 Epiph covered with rusty villous tomentum, Lvs on longish petioles elliptic ovate with revolute edges, Peds 2—3 terminal and lateral, Flws large, Lobes of Cal obovate unequal ciliated, Ovar. 5 celled, Cap oblong

19225 Lvs ample obov ellip cord at base glab above rusty ben , Hds glob dense, Peduncls downy and clammy, Cal. minute slightly lobed, Lobes of Cor deeply 2-lobed, tam 16, Ovar 18-celled hairy clammy Stig dilated

19226 Clthd with white or fulvous wool, Bnchs twisted, Lvs ellip obov or obl obt mucro glab above, Cory term. cap many-fld, Cal minute 5-lbd, Cor camp , Lbs of Limb entire, Stam woolly Cap cylind

19227 I vs large elliptic-lanceolate glabrous above but with rufous wool beneath, Heads many flwd, Bracts viscid, Cor campanulate straw-coloured large dotted with red, Limb reflexed, Stamens glabrous, Capsule cylindrical

19228 Bnchs slend twisted, Lvs ov -lanc acute with revo edges, and ruf scaly dots ben , I bs small capt., Lbs of Cal lin uneq beset with gland scale-like dots, Cor funnel-shpd I bs rndsh ac , Sta pil at base, Ovar 5-cld scurfy

19229 Leaves oblong-lanceolate acute with revolute edges and rusty tomentum beneath, Racemes terminal capitate, Calyx small 5-lobed, Corolla campanulate, Segments undulated 2-lobed, Ovarium hairy 10-celled

19230 Cvd with scales, Lvs ellip -lanc mucro naked above glaucous ben , Corymbs terminal 6—8-flwd, Cal 5-parted, Cor glandularly dotted camp , Lbs emarg , Stam downy at base, Cap sub-globose 5-celled glaucous scaly

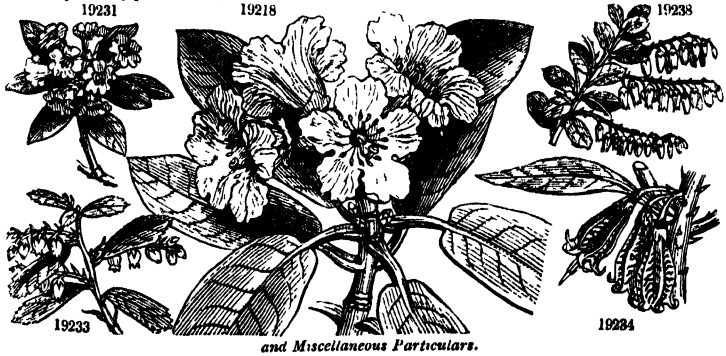
19231 Glabrous, Leaves oblong-obovate acute, Umbel many-flowered, Corolla salver-shaped, Tube long straight, Lobe of Limb obovate undulate

19232 Erect-branched, Lvs linear obtuse slightly serrated, Peduncles pilose, Flowers corymbose, Sepals acute glabrous, Corolla campanulate 5 lobed, with scarcely any tube, Style exserted

19233 Leaves oblong convex serrated near the top, Racemes pilose axillary nutant, Sepals ovate, Anthers bisetose on the back

[red yellow at base and apex, Tube bellied with a contracted mouth, Style and Sta exserted rather long

19234 Glab , Bnchs rather pend , Lvs lanc acum entire, Peds extra-axil twin or tern pend , Cor white lined with



19235 Downy, Bnchs ter rough, Bnchlets ang downy fuscous, Lvs obl acum sub-cord rough from dots above downy on the nerves beneath, Cor downy [lateral umbels, Cor cylind pentagonal

19236 Glab , Old Bnchs florif , young ones foliif , Lvs broad-lanc subserrated, Flws numerous in sessile pendent umbels

19237 Branches angular furfuraceous hairy as also calyx, Lvs on short petioles oval-obl. rather scabrous on both sides,

β Glab or furnished with a few brown hairs on the under side of the leaves [Rac. axillary, Cor glabrous

19238 Glabrous, Branches angular, Leaves elliptic cordate obtuse or retuse mucronate coriaceous marginate, Racemes axillary solitary pedunculate, Flowers secund, Corolla ovate, Teeth of Limb small erect

and Miscellaneous Particulars.

3018 *Bryánthus erèctus* is said to be a hybrid between *Phyllódoce taxifólia* and *Rhododéndron Chamæcístus* It grows best where the sun does not shine It thrives well in damp, cold, shady pits

3019 *Thibaúdia pulchérrima* will grow well in a conservatory border, or in a Camellia-house or greenhouse, trained against a wall The flowers appear on the year-old wood, developing at Christmas, and expanding in April, and are beautifully variegated, like those of *Fritillária Meleágris* The other species will thrive with the same treatment

3020 *Leucóthoë*. This is a splendid genus of hardy greenhouse shrubs, with racemes of scarlet flowers. They thrive best in light peat soil, well drained, and they prefer a cool shady place in summer. Propagated by layers

History, Use, Propagation, Culture,

3021. *Lydnia.* The hardy kinds of this genus are best grown in a peat border, along with other American plants They are increased by layers put down in spring. The tenderer kinds, as the *jamaicénsis*, require to be protected from frost in winter. They are all ornamental, and therefore desirable evergreen shrubs.

3022. *Agarista* is a splendid genus of tender shrubs. They grow best in a warm part of a greenhouse, in a mixture of loam, peat, and sand, and cuttings of ripened wood will strike root under a hand-glass in the same kind of mould

3023. *Gaylussàcia Pseùdo-Vaccínium* is a very handsome, hardy, greenhouse shrub, with racemes of scarlet flowers It should be grown in a compost of sand, loam, and leaf mould, and treated in the same way as Cape Heaths. It is propagated by layers as well as by ripened cuttings.

3024. *Macleània* The species require a warm greenhouse, and are splendid shrubs while in blossom. A mixture of sand, loam, and peat will suit them Owing to their producing large fleshy roots, a large pot or tub will be required

19239 Glabrous, Branches terete, Leaves cordate oblong mucronate pungent coriaceous, Racemes axillary and terminal erect, Flowers secund, Corolla urceolate 5-parted

19240 Covered with scale-like dots, Branches angular, Lvs oval-lanceolate slightly serrate coriaceous, Flowers axillary numerous fasciculately subracemose, Corolla ovate, Ovarium hairy, Anthers bifid at top

19241 Leaves cordate-ovate mucronate downy rusty beneath, Panicle terminal downy composed of racemes, Flowers secund

19242 Lvs lanceolate attenuated white beneath, Racemes simple glabrous, Flowers secund, Corolla pale green inclining to purple

19243 Glabrous or downy, Lvs elliptic lanceolate, Racemes secund erect bracteate, Corollas ovate cylindrical, Ovarium glabrous or nearly so

[late, Limb spreading

19244 Leaves sessile cordate obtuse dotted coriaceous, Peduncles glomerate axillary and terminal, Corolla urceo-
19245 Leaves ovate obtuse, Axils 3-flowered, Corolla urceolate pentagonal
19246 Leaves sessile oval-oblong obtuse reticulated obsoletely triple-nerved, Axils 3-flowered, Corolla cylindrical angular

19247 Prostrate hispid, Leaves cordate-ovate acute ciliately serrated rather hispid beneath, Racemes terminal and axillary beset with glandular hairs, Bracts ovate coloured, Cal coloured pilose, Cor. ovate, Limb spreading

[ate, Bracts coloured

19248 Clothed with rusty hairs and glandular pili, Leaves ovate acute mucronate serrated, Racemes terminal bracte-
19249 Procumbent filiform bristly, Leaves cordate mucronate nearly sessile naked above hispid beneath, Pedicels axillary short solitary, Flowers drooping

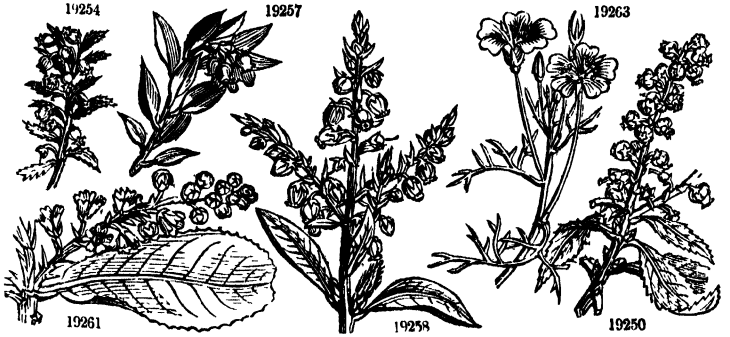
19250 Downy, Leaves oblong entire or slightly serrated with a hard firm reddish edge, Flws disposed in short pyramidal panicles, Peduncles glandular and woolly, Calyx smooth, Corolla ovate
19251 Leaves resembling the *Camélita* in form but *A'rbutus* in texture, Flowers small pure white
19252 Leaves oblong acuminate at both ends acutely serrated glabrous, Racemes axillary secund sessile solitary
19253 Arborescent, Leaves broad-oval quite entire glabrous on long petioles, Racemes axillary and terminal panicled dense-flowered

[1-nerved, Pedicels axillary solitary 1-flowered naked

19254 Erect-branched, Branches pubescent angular, Leaves linear-lanceolate acuminate remotely serrated glabrous
19255 Dark green, Branches setose, Leaves ovate-lanceolate acute denticulated and ciliated with bristles, Peduncles glandular, Berries red

19256 Erect, Bark deciduous, Lvs lanceolate acute sharply serrated glabrous glaucescent beneath, Racs paniculately branched pilose
19257 Erect downy while young, Leaves oval or oblong coriaceous mucronately pungent entire, Racemes short terminal, Bracts acuminated

[minate shorter than the pedicels



19258 Erect tomentose, Leaves linear-oblong entire mucronate green rusty beneath, Racemes panicled, Bracts acu.
19259 Erect tomentose, Leaves linear-lanceolate, Flowers racemose

19260 Leaves obovate obtuse 4 inches long clothed with white down beneath, Racemes panicled
19261 Leaves obovate-lanc acute denticulated wrinkled above tom. ben , as are the petioles, younger ones rusty, adult ones hoary, Racs loose so crowded as to appear panicled tomentose, Lobes of Corolla toothed ciliated
19262 Clothed with rusty hairs, Leaves oblong quite entire acuminated excavated at base, Racemes simple fascicled at tops of branches

19263 Leaves linear pinnate bipinnate or entire, Segment filiform undivided, Peduncles long, Petals bearded at base, Fruit corrugated

[Petals bearded at base

19264 Leaves elongated pinnate, Segments sessile ovate acute entire or 3-lobed, Peduncles very long, Calyx pilose,

and Miscellaneous Particulars.

it probably, they will succeed well planted out in a conservatory border. Water should be freely given in summer. To have the plant furnished well with young shoots, it will be necessary to cut it back early in autumn, in order to have the plant clothed with leaves before winter. They are difficult to multiply, but may be managed by cuttings under a hand-glass

19247 *Gaulthèria bracteàta* should be grown in a light peat soil, and placed in a cool airy pit or frame, and in summer it should not be exposed too much to the sun

3025 *Arctostáphylos* The hardy kinds are trailing evergreens, which grow best in peat soil, and are propagated by layering The rest may be cultivated and treated like the species of *Comarostáphylos*.

3026 *Comarostáphylos*, like the common kinds of *A'rbutus*, thrives best in a light sandy loam with a portion of leaf-mould The species may be budded on the common *A'rbutus* in July or August.

History, Use, Propagation, Culture,

3027 *Chariánthus coccíneus* is a splendid shrub when in blossom. It requires only the treatment of other hothouse Melastomaceous shrubs

3028. *Meriània* These two species are the white and red roses of the mountains of Jamaica. They are splendid when in blossom in their native mountains. In this country they will thrive in a compost of loam, sand, and peat and half-ripened cuttings will strike root in the common way in the same kind of soil

3029. *Medinílla magnífica* is a most splendid plant, with broad leaves, large coloured bracts, and panicles of pink flowers. It grows and flowers freely in a mixture of loam and peat. The pots should be well-drained, so as to allow water to be liberally given during the season of growth without the risk of the soil becoming soddened It should also be frequently syringed over head A climate that suits the pitcher-plant will answer this The species are all remarkable for the beauty of their foliage, and the delicacy of their blossoms. They all require the same kind of culture.

3030. *Heterótrichum mácrodon* requires the treatment of other hothouse Melastomaceous shrubs.

3031. *Lasiándra.* The species are worth cultivating for the sake of their large panicles of showy purplish-blue

19265 Leaves oblong on short petioles glabrous as are the petioles and branchlets, Branches deciduous

19266 Branches tetragonal bristly, Leaves ovate acute entire scarcely 3-nerved bristly, Cymes terminal pedunculate few-flowered, Calyx hispid

19267 Downy while young but becoming glabrous, Branches nearly terete, Leaves oval acuminated entire 5-nerved clothed with flocky down beneath or small dots

[solitary 1-flowered, Bracts 2 ovate-lanceolate entire, Lobes of calyx subulate at apex

19268 Glabrous, Branches subtetragonal, Leaves ovate-oblong acuminated 3-nerved denticulated, Peduncles axillary,
19269 Glabrous, Branches terete, Leaves ovate-lanceolate 3-nerved denticulated, Peduncles axillary solitary 1-flwd Bracts 4 lanceolate denticulate, Lobes of calyx subulate at apex

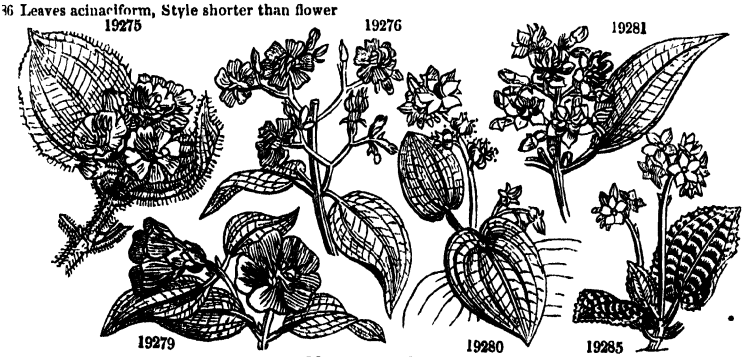
19270 Branches compressed tetrapt bristly at nodes, Lvs opp coriac glab. sess obovate-obl. cordately stem-clasping cusp at apex 3-nerved, Panics term elong with the brnchs vertic , Bracts large col ured decid , Flws decid.
19271 Branches tetrapterous, Lvs nearly sessile 3—4 in a whorl rarely opposite oval-oblong 7—9-nerved, Pedunes terminal axil nutant, Flws 6—10-androus [minate 5-nrvd green above, Panes thyrsoid term pedunc nutant
19272 Brnchs terete stuposely boarded at the nodes, Lvs opposite on short thick petioles elliptic-ovate coriaceous acu-
19273 Leaves opposite on short petioles oblong-lanceolate acuminate 3-nerved, Cymes axil or on the naked branches below the leaves, Flowers tetramerous, Anthers dark purple
19274 Branches acutely tetragonal smooth, Leaves sessile elliptic-ovate 5-nerved subcordate at base, Panicles terminal axillary erect, Bracts obsolete, Anthers dark purple

19275 Branches petioles and cymes covered with long fulvous hairs, Leaves opposite unequal cordate-ovate acuminate serrated 7-nerved, Cymes many-flowered, Stamens 16, Petals obovate-cuneated

19276 Branches compressed pilose, Leaves opposite oblong-lanceolate subcordate at base, Flowers panicled at top of branches, Calyx setose

19277 Branches tetragonal villous, Leaves oblong-lanceolate rounded at base 9-nerved silky beneath, Panicles terminal glandularly pilose as are the calyxes, Style villous
19278 Hispid, Leaves ovate-oblong glabrous wrinkled above pilose beneath 3-nerved ciliated, Flowers about 3 together terminal, Pedicels short hispid, Bracts lanceolate ciliate, Calyx bristly
19279 Villous, Branches tetragonal, Leaves petiolate ovate-elliptic acute 5-nerved entire setose above and clothed with silky villi beneath, Pedicels hispid axillary terminal, Calyx hispid, Bracts large coloured

19280 Stem creeping-branched hairy as are the petioles and peduncles, Leaves broad-ovate cordate 5-nerved spotted hairy nearly entire purple beneath, Peduncles axillary, Flowers in unilateral cymes, Calyx hispid



19281 Clothed with adpressed rufescent lepidoted powdery down, Leaves oblong 3-nerved glabrous above, Cymes panicled corymbose trichotomous, Calyx globose, Limb slightly 4-toothed

[dense cymes, Filaments red, Berries red

19282 Brnchs slender bluntly tetragonal, Leaves subcoriaceous oblong acuminate shining above, Flowers terminal in
19283 Branches bluntly tetragonal, Leaves obovate emarginately apiculated green above, Cymes axillary at ends of branches, Bracts rhomboid, Filaments white, Berries reddish

19284 Flower spikes scorpioid, Scape almost black, Leaves greenish almost black shining
19285 Stem short fleshy, Leaves hairy oval 5-ribbed oblong cordate green above and beautifully marbled with brown and white purple beneath, Scapes terminated by a spike, Flowers size of *Cyclamen*

19286 Leaves acinaciform, Style shorter than flower

and Miscellaneous Particulars.

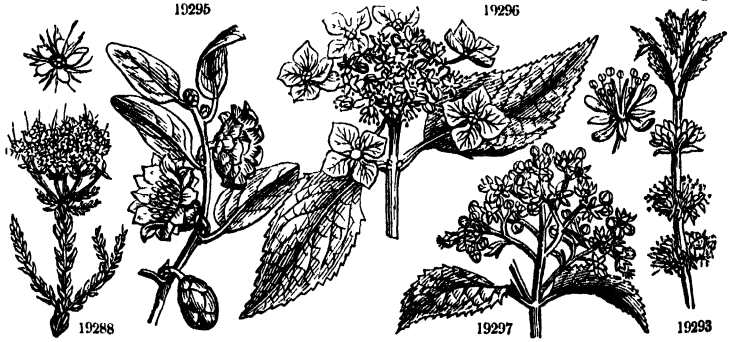
flowers A compost of loam, sand, and turfy peat will suit them, and they require plenty of water while growing The pots should be well drained by sherds.

3032 *Plerôma.* The plants of this genus are similar to the *Lasiándra*, and their culture is the same

3033 *Bastolônia maculàta* is a pretty little creeping plant. It grows best in light soil, and is readily increased by cuttings. Abundance of water should be given during summer, or while the plant is growing

3034 *Tetrazygia* The culture recommended for *Lasiándra* will suit this shrub equally well.

3035 *Olíma.* These are greenhouse shrubs. They grow best in light rich soil, and cuttings root planted in the ordinary way under a bell or hand glass.



3036 *Eriocnêma.* These pretty plants are probably only annual The leaves of *E. marmoràtum* are green above, and beautifully marked with brown stains and broken streaks of white, and on the under side rich purple The blossoms are of a rich rose colour. The leaves of *E. æneum* are greenish brown, almost black, and shining with quite a metallic lustre These two plants are very delicate They are grown in peat, but require to be kept continually shaded and damp. The treatment of the tropical *Orchidea*, such as *Anæctochilus*, would suit them

History, Use, Propagation, Culture,

3037. *Verticórdia* is a genus of pretty little plants rather difficult to cultivate. A mixture of sand, loam, and peat or vegetable earth, will suit them best. Cuttings will probably root if planted in silver sand with a bell glass over them.

3038 *Acrophýllum* only requires the treatment of an ordinary greenhouse shrub. A compost of sand, loam, and peat suits it best. It is a pretty plant when in blossom.

3039. *Codia* is a remarkable plant, lately introduced, in a living state, to this country. It requires the same culture as *Acrophýllum* or *Callicoma*.

19287 Calycine lobes linear ciliated, Bracts concrete on one side and separating lengthwise on the other, Leaves acicular

19288 Calycine lobes linear subulate bearded each ending in an awn, Bracts distinct, Leaves obtuse adpressed

19289 Calyc. lobes trif, Lobules multif, Segs wool-fmd beardl., Pets and sterile Fil. cil., Style beardl shorter than pets, Stigma subcap, Bracts distinct mutic, Lvs obov. triquet submucr. serrul on back, Peds elong. corym.

19290 Branches comp scab., Leaves acerose acum. glab, Upper or floral ones ovate, Corymbs dense, Bracts mutic decid, Seps multifid plumose, Pets many-parted glab, Sterile Filaments lanc pectinate, Anthers mutic

19291 Lobes of calyx multifid, Lobules linear pennately plumose, Petals deeply toothed, Style plumose, Leaves concave ovate imbricate mucronate hispidly ciliated, Pedicels short racemose subsecund

19292 Lvs lin. triq. obtuse, Corymbs capit many-flwd, Bracts deciduous cucullate under the apex, Tube of Calyx vill., Sepals unguiculate many-parted, Petals roundish downy fringed, Style bearded with forked hairs

DIGYNIA.

19293 Erect-branched, Leaves 3 in a whorl nearly sessile oblong cordate acute coarsely serrated glabrous coriaceous glaucous beneath, Stipules paleaceous persistent, Flws small numerous pedicll verticil, Capsule membranous

19294 Leaves elliptic obtuse entire glabrous coriaceous on jointless petioles, Stipules caducous, Flowers small white capitate, Heads of flowers globose pedunculate axillary

19295 Lvs alternate ellip -ov obtuse petiol, Flws capit 5 in each head coadunate at base, Involl double emulating a *Camellia* flwr, outer one of 5 silky brown lvs, inner one of numer rose-cld lvs, Fruit comp. of 5 radiat caps

19296 Leaves opposite on short petioles ovate-oblong glabrous sharply serrulated, Branches of flat dense cyme downy radiating, Flowers 4—6 on horizontal peduncles, Sepals usually 4 obovate serrated

β Flowers blue

19297 Leaves oblong-lanceolate acutely-toothed entire at base downy on ribs beneath, Panicle pyramidal, Branches cymose, Flowers heptamerous icosandrous

19298 Leaves oblong-lanceolate smoothish serrated from the middle upwards, Cymes nearly undivided on short peduncles, disposed in a crowded panicle

[Cymes panicled, Calyx ventricose 5-parted hairy, Segments foliaceous, Petals spatulate unguiculate

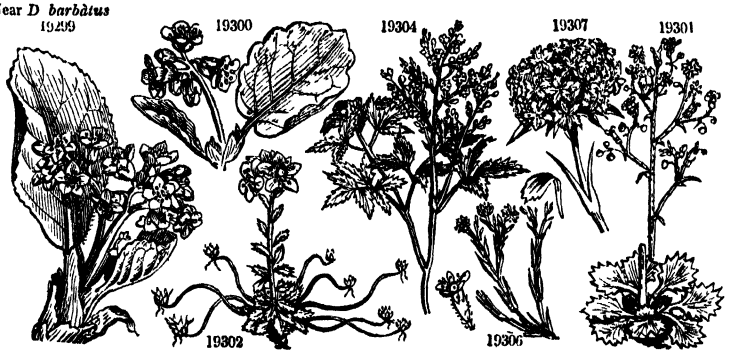
19299 Leaves obovate coriaceous ciliated subauricled at base, Petioles large sheathing, Peduncles stiff rather scabrous,

19300 Leaves obovate coarsely crenate toothed hairy fringed, Scape glabrous, Racemes crowded, Calyx smooth, Segments obtuse, Petals roundish

β Leaves oblong acutely and deeply serrated

19301 Lvs roundish smooth acutely serrate shining, Petioles broad flat above, Panicle racemose, Calyx reflexed, Filaments enlarged upwards

19302 Runners filiform proliferous at top, Stem erect simple 1—3-flowered beset with glandular hairs as are the calyxes, Leaves obovate glandularly ciliated, Petals persistent



19303 Shoots trailing, Leaves 3—5-parted fringed with jointed hairs, Lobes linear acute, Cauline leaves few, Flowers few 2—4, Calyx segments subulate acute, Petals oblong inflexed at sides 3-nerved

19304 Leaves tripinnately cut, Petioles pilose coloured at the nodes, Terminal Leaflet ovate tapering to both ends hispid on the nerves

19305 Leaves obtuse, Flowers capitate, Bracts crowded pointed membranous, Petals obtuse quite entire

19306 Downy tufted at base fastigiate at top, Leaves linear 3-nerved, Calyx bractless, Petals obovate entire

19307 Near *D barbàtus*

and Miscellaneous Particulars.

3040 *Rhodoleia* is a very pretty small tree or large shrub, resembling *Camèllia japónica* both in leaves and heads of flowers. The culture and propagation recommended for *Camèllia* will also suit this plant.

3041 *Hotcia* is nearly allied to *Astilbe*, differing principally in the presence of petals. It is an elegant plant, of easy culture.

3042 *Tùnica* is a genus of pretty little plants, well suited for decorating rockwork. They may be increased by division, but better by seed. The genus is separated from the old genus *Gypsóphila*.

History, Use, Propagation, Culture,

1048. ***Silène speciòsa*** and ***S. lacinìàta*** being rather tender, will require protection in winter. They are fine plants with scarlet flowers. Turfy peat is the best soil for them. ***S. Schâfta*** is a fine plant for ornamenting rockwork.
3043. ***Vivìania*** is composed of pretty dry sub-shrubs with opposite exstipulate downy leaves, and rosy flowers

TRIGYNIA.

[duncles 1-flowered, Calyx cylindrical, Petals cut
19308 Downy, Stem erect branched, Leaves large lanceolate-acute, Flowers large terminal rather drooping, Pe-
19309 Hairy, Leaves sessile lanceolate bluntish, Flowers axillary and terminal, Calyx hairy, Petals deeply cut
19310 Root woody many-stemmed, Stems ascending simple, Peduncles 1—2-flowered, Leaves obovate acute, Flowers erect, Calyx long clavate, Petals cuneate denticulate
19311 Downy and clammy procumbent, Leaves lanceolate, lower ones on long petioles ciliated at base, Flowers large panicled, Calyx clavate, Petals broad bifid

19312 Tufted, Leaves awl-shaped smooth 3-nerved, Peduncles 1-flowered elongated downy, Sepals acute 3-nerved, Petals elliptic, Capsule 3—4-valved longer than calyx

19313 Ascending-branched, Leaves subulate semi-terete obtuse glabrous, Branches naked, Peduncles 1—3-flowered, Lateral pedics bibracteate, Sepals ovate-lanc 3-nerved about as long as petals, Caps 3-valved equal to sepals
19314 Glabrous, Stems terete procumbent 1—2-flowered, Leaves spatulate, Flowers terminal rather globose, Sepals ovate-obtuse hardly nerved equal to petals, Capsule ovate globose
19315 Procumbent-branched, Leaves ovate-roundish rather imbricate, Peduncles lateral few-flowered, Sepals ovate-obtuse shorter than petals, Capsule 3-valved length of calyx

19316 Leaves grey and glandular beneath with prominent veins, Branches pubescent, Peduncles shorter than leaves

19317 Leaves distant white and glandless beneath, Branches pubescent, Peduncles elongated

19318 Leaves ovate shortly acuminate glabrous above downy reticulated and glandular beneath, Glands pedicellate, Flowers smelling like Lily of the valley

19319 Leaves palmately 5—6-lobed or parted acute serrately ciliated cordate glabrous, Petioles biglandular at apex, Petals fringed [late, Lobes of calyx nearly orbicular with small glands, Petals fringed
19320 Glaucous, Leaves cordate oblique at base smooth ciliated, Petioles furnished with 2 glands, Flowers umbel-
19321 Rather pilose, Leaves ovate-obtuse mucronate or subcordate 3-lobed, Lobes oblong obtuse, Petioles biglandular, Umbels axillary many-flowered, Styles leafy at top

19322 Glabrous, Leaves narrow lanceolate entire undulated, Petioles short glandless, Corymbs few-flowered terminal, Calyx glandular, Petals undulated, Styles simple, Carpels villous

19323 Young branches covered with stellate down older ones glabrous, Leaves ovate-lanceolate serrulated clothed with white tom ben., Cymes trichot., Cal tom, Pet obl obt, Fils glab broad trifid, Anthers pilose, Style glab
19324 Branches long flexile and drooping, Leaves small wedge-shaped lanceolate or ovate-lanceolate serrulated covered with starry hairs, Racemes terminal on the lateral branches, Flowers small
19325 Leaves ovate acuminated serrulated downy as are the branches, Panicles corymbose, Calyx segments triangular acuminate, Filaments tridentate, Anthers glabrous, Styles 4—5

PENTAGYNIA.

[secund pedunculate
19326 Tufted, Leaves rosulate ovate pointed concave glaucous when young, Flowers loosely and racemosely panicled
19327 Caulescent dwarf, Leaves tongue-shaped flat acute white, adult ones green, Stems decumbent, Racemes secund corymbose panicled, Flws pedunculate [subcorymb, Branches few-flwd, Petals keeled gib at base
19328 Leaves obovate spatulate, old ones retuse glauc crenul, cauline ones linear-oblong quite entire, Panicle dense
19329 Leaves spatulate excavated glaucous crowded at top of branches, Racemes axillary simple or forked, Bracts drawn out into an acute gibbosity at base [Bracts coloured triquetrous, Cal. rose-coloured, Cor. yellow
19330 Caulescent, Lvs oval-acute terminal sometimes rosulate sometms imbricated, Spike cylindrical dense, Lower
19331 Lvs rosulate crowded oblong concave glaucous discoloured, Racemes nodding at tops, Flowers pedunculate
19332 Caulesc, Lvs subrhomboid acute concave rosulate at tops of branches, Pan dense cylin with 3—4-flwd branches
19333 Caulescent, Leaves ovate-acute lengthened into the flat petioles, Racemes nutant
19334 Lvs spatulate excavated glaucous crowded at tops of branches, Racs axillary simple or forked, Bracts drawn out into an acute gibbosity at base, Flowers secund, Pedicels bibracteate
19335 Leaves rosulate crowded cuneate mucronate glaucous, Racemes secund recurved, Flowers on long peduncles

[sessile compound, Petals acute
19336 Leaves opposite obsoletely denticulated adnate, lower ones broad elliptic, upper ones sessile cordate, Corymbs
19337 Glab, Lvs obov. lanc ser. altern. or subop., Stms ascend. creep. at base, Cym term. crowd shorter than floral lvs
19338 Stems many erect glabrous-branched tripartite at top, Flowers sessile unilateral along the branches, Leaves linear adnate, Sepals foliaceous
[Stamens all longer than styles, Cells of Ovar 1-seeded
19339 Shrubby branched, Pet. dilated foliaceous lanc. lin. acute at both ends, Pedun axil short bifid, Pedic. fascicled,
19340 Glabrous, Leaves trifoliate purple beneath, Leaflets deltoid, Scapes long 6—9-flowered, Sepals acuminate tipped by 1 linear orange glands, Stamens glabrous, Styles downy

and Miscellaneous Particulars.

posed in corymbose terminal panicles, and they may be either increased by cuttings or by seed.
3014. *Heteropterys.* This genus is nearly related to *Banisteria*, and its culture and treatment are the same as f r
at genus It is well suited for training up rafters in a conservatory.

History, Use, Propagation, Culture,

3045. *Quillàja Saponària.* This tree is quite hardy enough to stand our milder winters, and ripened cuttings will probably root if planted in autumn. The bark of the tree is used in Chili for soap.

1076. *Befària.* The treatment given to Indian *Azaleas* will suit the strongest kinds, and that of *Rhododéndrum*

19341 Root tuberous, Leaflets 3 obcordate bilobed downy beneath, Scape many-flwd, Petals and Sepals pilose the latter bipinnulate at top, Style erect shorter than stamens [toothed, Styles short diverging
19342 Lvs all radiating, Lflts 7—8-oblong spatulate entire, Scape umbellate many-flwd, Stamens unequal longer ones
19343 Bulb simple, Leaves ternate, Leaflets fleshy obcordate violet beneath, Petioles downy, Scape 2—3-flwd, Sepals biglandular at apex, Styles short glabrous

19344 Lobes of Calyx constricted, Appendages of Petals short emarginate, Capsule ovate granular

19345 Leaves oval usually toothed

---

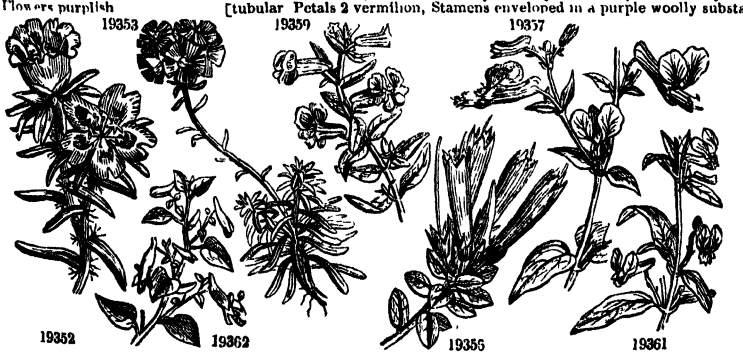
dehiscing by a terminal pore Stigma simple, obtuse. Berry 5-celled, many-seeded. Seeds small, angular.

Order 6. DODECAGYNIA. 12 Stamens 12 Styles.

3047 1110*a*. *Ædonum*. Calyx campanulate or turbinate, 6—12-cleft Petals as many. Stamens same number as petals. Ovaria equal in number to the petals, immersed in the receptacle at base Styles triquetrous. Stigmas acute, at length papillosely capitate Fruit follicular, dehiscing at base. Seeds obliquely subpyriform.

MONOGYNIA.

19346 Glabrous, Leaves oblong obtuse glaucous beneath, Racemes terminal and axillary, Pedicels somewhat fastigiate
19347 Branches villous, Lvs oval-acute densely imbricate with revolute margins glaucous beneath villous on midrib, Corymbs dense short, Peduncles covered with rusty tomentum, Calyx smoothish, Style exserted
19348 Brnchs downy hispid, Lvs slightly downy above, rusty tomentose beneath, Pans close term , Pedun woolly hispid
19349 Leaves oblong mucronate glaucous beset with glandular hairs along the middle nerve on both surfaces, Racemes terminal beset with clammy glandular hairs [Corymbs terminal simple beset with rusty glandular hairs
19350 Lvs elliptic nearly glabrous above, downy glaucous beneath, clothed with rusty toment while young, ciliated,
19351 Branches downy tomentose, Leaves oblong glabrous glaucous beneath, Corymbs large terminal, clothed with rusty tomentum



19352 Stem erect thready in the axils, Lvs subcylindrical obtuse, floral ones subverticillate, Flowers large terminal sessile, Petals 2-lobed

19353 Suffruticose procumbent, Leaves crowded linear acutish pilose, Peduncles elongated bearing a few distant small leaves, Corymbs terminal many-flowered, Bracts ciliated, Stamens 18—20
19354 Caulescent branched, Leaves obovate-oblong acuminated, Flowers panicled, Pedicels 5 times longer than bracts, Stamens 10—15

19355 Leaves nearly opposite or alternate lanceolate-acute smaller than those of *H. salicifolia*, Flowers nearly sessile, Capsules globose

19356 This plant is mentioned in the Gard. Chron as having been lately introduced

[spurred obliquely 6-toothed, Stamens 11, Two upper Petals large roundish, and 4 lower minute
19357 Downy suffruticose, Leaves oval opposite sessile entire, Racemes panicled bracteate, Calyx coloured bluntly
19358 Flowers crimson or deep purple. Distinguished from *Cuphea Llavea* by its panicled flowers
19359 Ascending clammy hispid from brown hairs, Leaves opposite oblong-lanceolate obtuse hairy, Flowers subspicate secund, Calyx tubular, Petals roundish stipitate, 2 larger than the rest
19360 Suffruticose, Branches compressed, Leaves petiolate oblong-acuminate rather scabrous, Pedicels winged, Calyx scarlet elongated 6-toothed, Spur dilated, Anthers black, Filaments smooth [obovate large, Stamens 11
19361 Stems numerous hispid, Brnchs ascending, Lvs nearly sess. ov-lanc strigose, Pedunc inter-foliac , Pets few
19362 Decumbent or erectish downy, Leaves ovate lanceolate, Ped uncles generally 2-flowered subracemose, Calyx clammy, Spur blunt, Petals 2, Stamens 11
19363 Leaves ovate-acuminate covered with white bristles, Flowers solitary axillary on short pedicels Calyx long 3 Flowers purplish [tubular Petals 2 vermilion, Stamens enveloped in a purple woolly substance

and Miscellaneous Particulars

cidsum the weaker. A damp atmosphere, and a free circulation of air, are necessary, but they are of difficult
ulture. They are splendid plants in blossom when well grown.
3046 *Ceratostema* Pretty shrubs, nearly allied to *Befaria*, and requires the same culture.

DODECAGYNIA.

Sempervivum Youngeànum Hort., and all the species natives of the Canary Islands and Madeira, belong to this genus.

P. 408. CLASS XII. — ICOSANDRIA. STAMENS many, perigynous, or inserted into the Calyx.

Order 1 MONOGYNIA. Many perigynous Stamens 1 Style

3048 1111*b*. *Echmópsis* Tube of Perianth much prolonged beyond the ovarium Sepals numerous, lower ones scale-formed, upper ones elongated, spirally imbricate, setigerous in the axils, petaloid, longer, more or less spreading, emulating a funnel-shaped or campanulate corolla Stamens in two series, one of the series inserted in the bottom of the tube, the other series connate with the tube Style filiform Stigma many-rayed. Rays linear Berry scaly, setose in the axils

3049. 1111*c*. *Leuchtenbérgia* Sepals numerous, adnate to the ovarium at the base, and combined into an elongated tube; outer ones calycine, inner ones petaline Stamens numerous, concrete with the tube Style thick, columnar Rays of Stigma about 10, recurved Ovarium 1-celled Ovula numerous, parietal

3050. 1112*a*. *Lepismium.* Sepals adnate to a pear-shaped ovarium, and combined into a short tube, outer ones 4—5, subimbricate; inner ones 5—7 petal-formed. Stamens filiform, in many series Anthers minute, reniform Style columnar. Stigma 4—5-rayed. Ovarium subglobose, smooth, crowned by the dry calyx.

3051. 1115*a* *Bellòtia* Tube of Calyx rather turbinate Limb 5-cleft Lobes valvate Petals 5 Stamens 10—30, free, shorter than petals Style filiform Stigma capitate Capsule 3-celled, many-seeded.

3052 1115*b*. *Babingtònia.* Calyx turbinate. Limb 5-cleft, persistent Petals 5, sessile, orbicular Stamens 15 3 opposite each petal. Anthers roundish, didymous, opening by a pore at apex. Ovarium 3-celled, many-seeded Capsule perforated at apex.

3053 1115*c*. *Lhótskya* Bracts twin, paleaceous, persistent, connate at base. Calyx with a 10-ribbed tube, and a 5-parted limb · Lobes short, scarious, obtuse. Petals 5, obovate Stamens numerous, unequal, exserted, inserted with the petals. Style filiform. Stigma dot-formed Capsule oblong, 10-ribbed, 1-celled, indehiscent, 1-seeded by abortion, the ovula being twin.

3054 1115*d* *Buckhoùsia* Calyx turbinate, villous, covered with imbricate caducous bracts outside Limb 5-parted, petaloid Petals 5, small, concave. Stamens numerous Fruit dry, coriaceous Ovarium adnate to the tube of the calyx at base, hairy, 2-celled

3055 1115*e* *Hypocalýmma* Limb of Calyx 5-parted. Petals 5, unguiculate, orbicular Stamens 20—30 Ovarium 2-celled, many-seeded Style filiform Stigma capitate.

History, Use, Propagation, Culture,

3047. *Æónium* Most of the shrubby species of *Sempervivum*, natives of Madeira and the Canaries, belong to this genus; as *Sempervivum tabulaeforme, Smithii, arbóreum,* &c. The species are both singular and ornamental.

DODECAGYNIA.

[lines beneath papillose on margins, Panicle cymose, Flowers 6—8-parted
19364 Branches covered with glandular down, Leaves cuneate-spatulate glabrous thick convex and marked with red
19365 Leaves thick dark green oboordate spatulate subtetragonal at the base obsoletely mucronate ciliated on the margin

3056 1117*a*. *Angóphora.* Tube of Calyx turbinate, marked with 5 prominent ribs: Limb of 5 persistent teeth Petals 5 Stamens indefinite. Style filiform Capsule covered by the corticate calyx, obovate, truncate, 3-celled, 3-valved. Seeds solitary or few.

3057 1117*b* *Callistémon.* Tube of Calyx half-spherical: Limb 5-parted Lobes obtuse Petals 5 Stamens numerous Style filiform. Stigma capitate. Capsule 3-celled, many-seeded, covered by and adnate to the thickened tube of the calyx, which is adnate to the branches

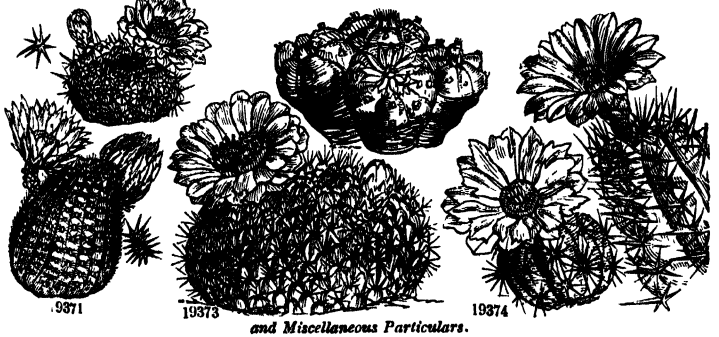
3058 1129*a*. *Cérasus.* Drupe globose or umbilicate at the base, fleshy, glabrous, containing a smooth, compressed stone Leaves conduplicate when young.

Order 2. DI-PENTAGYNIA. Many perigynous Stamens. 2 to 5 Styles.

3059 1136*a*. *Lindleya* Calyx with turbinate tube and a 5-parted limb. Petals 5 Stamens 15—20. Styles 5 Stigmas subclavate Capsule covered by the calyx, ovate, pentagonal, 5-furrowed, 5-celled, 5-valved, woody Cells 2- or only 1-seeded by abortion Seeds girded by a membranous edge.

3060 1136*b*. *Neillia* Calyx campanulate, free, 5-cleft Petals 5, roundish, sessile, inserted in the throat of calyx Stamens numerous, disposed in a double series, inserted with the petals Filaments smooth Anthers roundish, 2-celled Style smooth. Stigma obtuse Capsule follicular, 1-celled, opening on the inner side, many-seeded. Seeds spherical, shining, in two rows

3061 1136*c* *Adenóstoma.* Calyx funnel-shaped. Tube 5 angled Limb 5-parted Segments short Throat furnished with 5 fleshy, transverse, oblong glands inside Stamens 15, in the throat of the calyx Petals 5, ovate, roundish, shortly unguiculate. Ovarium solitary, sessile, ovate, compressed obliquely, truncate at apex, 1-celled, 1-ovulate Style sublateral Stigma obtuse



3062 1139*a* *Nagèlia* Petals small, spreading Stamens 10—15. Carpels 2 adnate to the back of the calyx one round, crowned by the calyx, fleshy, brittle Seeds 2 in each cell, compressed

3063 1141*a* *Schizonótus* All as in *Spiræ'a*, except the disk, which fills the bottom of the calyx. Ovula many, pendulous Carpels cohering into a 5-celled capsule, each splitting on the back to release the seeds Leaves pinnate

MONOGYNIA.

[Spines setaceous 8—10 one of which is longer and stronger
9366 Globose depressed glaucescent with about 10 ribs, Ribs obtuse sinuately crenated, Areolæ remotish woolly,
[Spines strong equal a little arched brownish, Flowers lateral scattered solitary, Calyx scales ciliated
9367 Globose umbilicate glaucous about 12-ribbed, Ribs elevated remotely crenated, Areolæ remote white woolly,
9368 Roundish-oblong 5—6-ribbed, Ribs prominent, Areolæ approximate woolly unarmed, Flowers rising from the umbilicate top of plant [tical series, Areolæ tomentose, Prickles 5 strong recurved nearly equal, Flws large
9369 Globose rather glaucous tuberculate hardly ribbed, Tubercles large mammæform disposed in an irregular ver-
9370 Glob depressed rather glauc, Tuber round large 6-sided mammæform confluent, Areolæ oval tomentose, Prickles about 10 slen. spreading, the cent. one long, Flws large [ones spreading subpect, in ones smaller, Pets ser.
19371 Rndsh-ov depressed about 20-ribbed, Ribs elev. obt, Areolæ approx white woolly, Prckls num of two forms, out.
19372 Tufted turb depressed glauc. 6—8-ribbed, Ribs broad convex tuberc unarmed, Pulv formed of dense fascicles of hairs, Flws small nearly solitary [tral one erect long, Flws solitary scattered, Tube of Calyx woolly
19373 Glob depressed green umbilicate, Tubercles conical, Areolæ small tomentose, Outer Prickles radiating, cen-
19374 Glom nearly glob. with about 10 deep furrows, Tubercles conical, Areolæ prom. woolly, Prickles 10—12 acicular radiant straight, central one stronger, Calyx scaly, Scales imbricate woolly at top, Stigmas radiant green
19375 Solitary tall conico-columnar deeply 8—10-furrowed, Ribs obt. tuberculate, Tubercles compressed round, Areolæ scarcely woolly, Prickles 9 strong straight purple, cent. one twice the size of the rest, Calyx scaly
β Plant elliptic

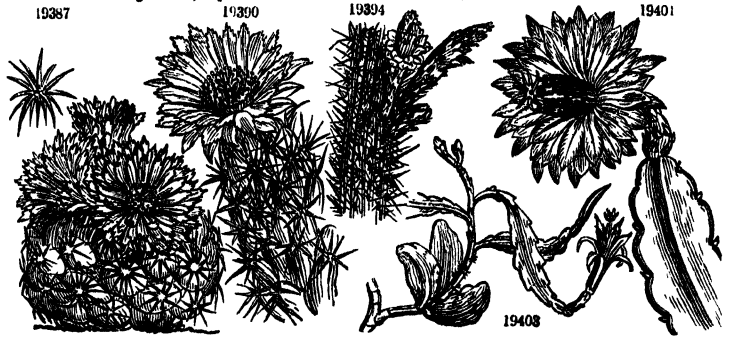
History, Use, Propagation, Culture,

19381. *Echinocáctus Visnàga.* This wonderful plant was found in Mexico, at San Louis Potosi, and is one of the largest and most remarkable of the *Cáctus* family In its native country it bears the name of *Visnàga*, which signifies a toothpick among the Mexican settlers, who use the spines for that purpose. The original plant, sent to the Royal Botanic Garden at Kew, was nine feet high, and nine and a half in circumference, and it weighed a ton After a year of apparent health it exhibited symptoms of internal decay, the inside became a putrid mass, and the crust, or shell fell in by its own weight. Other lesser ones are, however, in the collection at Kew. All the plants were procured with great trouble, by Fred Staines, Esq. The ovarium is elongated and densely woolly, and furnished with soft prickles or scales at top, and the petals are serrated

19376 Erect, columnar 12—14-furrowed spiral, Ribs and Furrows acute, Areolæ approximate naked, Prickles 8 fuscous straight, 7 radiating, central one 3 times larger and vertical, Flowers 3—4 terminal, Stigmas 9—12 linear
19377 Subglob. green 13 angld, Ribs strong acutish, Areolæ large obl. short-woolled, Out. 9 Prckls straight radiat., inner 4 strong, up 3 straight, cent one long flattened hooked [ment., Out. 10 Prickles slend., cent 4 stronger
19378 Subglobose tuberc. hardly umbilicate, Tuberc in 15 nearly vertical series confluent obl., Areolæ oval white to-
19379 Globose depressed 12—14-ribbed rather glaucous, Ribs obtuse, Areolæ white tomentose numerous, Prickles slender 12—18, of these 4—5 are twice the length of the rest, Flowers crowded, Petals serrulated
19380 Globose depressed obscure green 16-angled, Ribs arched crenate, Areolæ immersed, when young white and very villous, Outer Prickles 9 spreading reddish, central one erect brown all straight
19381 Lrge ellip many-ang. with nar. sinuses and deep sinuat. tuberc angles, top very woolly, Areolæ approx. rhomb immersed glab pale brown, Prickles 4 strong, cent. one 2 in long, the other 3 deflexed shorter, Flws copious
19382 Globose glaucous flat at top tuberculate Tubercles hexaedrous disposed in two series vertical and spiral, Areolæ immersed tomentose, Prickles 7 radiating unequal, central one longer stronger
19383 Oblong many-ribbed, fascicles of spines approximate woolly at base, Outer Spines 20—40 weak white, central 3—4 purple stiff, Petals in 2 series serrated at top
19384 This is nearly the size of *E. Visnàgo*, and was sent to Kew Gardens along with it, but has not been described

19385 Ovate glob. 14—16-ribbed, Ribs vert. obt., Areolæ large approx ellip woolly, Prickles acicular yellowish brown at top, outer ones 8—10 radiate 1 inch straight, central one very long 3 inches curved Cal rather scaly hairy
19386 Globose depressed green 17-ribbed, Ribs compressed, the Pulvinæ crestedly subrepand immersed rather crowded grayish tomentose, Prickles stiff, outer ones spreading, the central one longer, Flowers white
β Flowers purple

[strongest, Wool floccose in the axils of areolæ and about the flowers
19387 Roundish cylindrical, Mammæ broadish obscurely 2-lobed at top, Prickles 12 spreading recurved, inner series
19388 Glaucous roundish depressed contracted at base, Mammæ obtuse conical tetragonal umbilicate at apex, upper ones furnished with 3—4 erect acicular spines, the rest naked [olæ stiff, lower one longest
19389 Simple nearly globose, Axils woolly, Mammæ crowded slender angular, Prickles 4 from the nearly naked are-
19390 Simple clavately columnar glauc green, Axils tomen, Mammæ large elongated angular, Areolæ tomen term., Prickles straight elongated 8—10—12, central one longer and stronger, Flws 2—3 term large, Pets ser. at apex



19391 Shrub fleshy cylindrical, Mammillæ elongated leaf-formed triquetrous truncate, lower ones deciduous, Spines glumaceous, outer ones shorter about 10, central one very long triquetrous at base

19392 Erect with long joints glaucescent, Ribs deep 4 sometimes 3—5 compressed obtuse undulately repand, Arcolæ remote white tomentose, Prickles stiff straight 4—6—8 unequal, outer ones stellately spreading brown
19393 Erect conico-cylindrical acutely 12—14-ribbed, Areolæ approximate tomentose usually 12-spined, Spines and Prickles acic. short, cent one 1 in long, Flws brick-red Scales of Cal green at top bristly, Pets obov -acute
19394 Erect cylin. many-angled glauc, Ribs obtuse equal, Areolæ copious brown woolly, Spines numer unequal 4—5 are stronger white all deflxd, Flws numer orange clrd, Scales of Cal remote, low ones cil, Stamens unequal
19395 Jointed radic green triang, Angles repand obt, Areolæ remote nearly nak, Prickls very short straightish 2—3, Bristles short decid, Fls large with cylin scaly tubes, Scales large clrd gradually changing to sepals and petals
19396 Erect bluish 8 angled, Ribs blunt crenated, Areolæ approx., Prickles acicular of two colours rising from black tomentum, about 12 radiating, 3—4 central, the upper ones usually the strongest, Petals undulately toothed
19397 Subclavate green attenuated umbilic at top, Ribs 13 vertical acute, Spines acicular, cent. 4 black at top and bottom, out 9—10 shorter yellowish radiat irregularly [white radiat, cent ones 2—4 brown hardly larger
19398 Fresh-brnchd 8-ang. with broadsh sinuses and scarcely prom ribs, Areo approx, Out. Prckls 6—8 bristle-lmd
19399 Erect large 5-angled with deep furrows, Spines numerous usually an inch long brown

19400 Erectish, Joints obovate truncate at both ends very blunt one-toothed having a cluster of hairs in the teeth
β Corolla with equal spreading sepals, Ovaries 4—5 winged, Stamens monadelphous at base

19401 Branches straight compressed biconvex having the margin exactly crenated green, Flowers large white, Stigma 9-rayed
19402 Branches large flat foliaceous green obtuse having the margins repandly toothed and the teeth truncate

19403 Prostrate weak, Adult Branches terete younger flat articulated crenate, flowering ones lanceolate terete at base, sterile ones oblong sessile, Sepals 4 narrow, Petals 4 broader, Stigmas 5

and Miscellaneous Articulata

3018 *Echinópsis* comes very near to *Echinocáctus*, and the treatment and cultivation of the species are similar to that required by those plants

3019 *Leuchtenbérgia* is a singular Cactean plant. Few persons, viewing it destitute of flowers, would imagine it to belong to *Cáctaceæ*: the mammillæ have rather the appearance of leaves of some aloid plant, while the stem, appearing as if formed of the persistent bases of old leaves, resembles that of some *Cycadeous* plant. The blossoms differ in no particular from those of *Cèreus*. The propagation and cultivation are the same as those for *Cèreus*, but it requires more moisture, being a less succulent plant.

History, Use, Propagation, Culture,

3050. *Lepismium* is a genus composed of very singular plants in habit They require the same treatment as th species of *Cereus*.

3051. *Billòtia* The species are pretty shrubs when in blossom, and are well suited for conservatory plants compost of loam, peat, and sand is the best soil for them. Cuttings taken from young wood root readily if planted i sand with a bell glass over them

3052. *Babingtònia Camphorósmæ* is a greenhouse shrub, graceful in its habit, and not difficult to cultivate grows best in a rich brown peat and leaf-mould, and flowers freely during the summer months from the ends o pendent branches. Cuttings of young wood will strike root if treated in the usual way.

3053. *Lhótskya* is a genus of pretty heath-like plants They are rather difficult to cultivate A compost of ligh loam, sand, and peat suits them best; and young cuttings will strike root if planted in sand, placing a bell-glass ove them.

19404 Branches foliaceous stiff flat thick pinnatifid, Lobes almost rectangular triangles, Flowers brown outside and white inside, Sepals longer than petals, Stigmas 9—10

19405 Glaucescent articulated oblong compressed crenate, Scales in the crenatures larger than in the allied kinds, Rootlets numerous issuing from the joints, Flowers yellow outside but white inside

19406 Erect-branched pale green, Branches cylin , Areolæ crowded white tomen , older ones globose furnished below with 3—5 brownish prickles, Flowers glomerate Petals obovate-lanceolate sulphur-coloured tinted with red

19407 Decumbent obovate green, Areolæ crowded laniferous, Prickles of two forms, upper ones setaceous yellow, lower 1 or 2 strong white

[bearded, Flowers on the lower branches terminal solitary, Style exserted

19408 Erect much-branched, Branches scattered terete articulated dotted, Joints of branches short, ultimate ones

19409 Trailing, Stem flat, Joints leafy roundish-ov flat hanging down 3 in long 2 in broad with a thick prom woody midrib, Fls sol sess issuing from each crenat pale brownish yel their buds tinged with pnk, Pets ov. obl. obt

19410 Pendulous branches verticillate naked glabrous, Calyx 4-parted, Petals 4

19411 Plant diffusely suberect subarticulated, Joints elongated slender 3—4-sided, Margins acute crenulated purple, Crenæ remote furnished with white hairs and propped by foliaceous bracts

19412 Articulated erect subradicant pale green triangular, Ribs much compressed repandly crenated furnished with an ovate acute scale and numerous white hairs at the crenæ

19413 Leaves oval-elliptic acuminate denticulate downy beneath, Flowers racemose, Lobes of Calyx acuminated Style 4-cleft at apex [minate, Style deeply 5-cleft, exceeding the stamens

19414 Leaves ovate acuminate sharply serrate downy beneath, Flws solitary or by threes, Lobes of Calyx long acu-

19415 Branches pendulous, Branchlets downy, Leaves ovate acute coarsely toothed pilose beneath, Racemes compact term 5—9-flwd, Style 4-parted, Calyx spread [brous above Flws solit or by threes term , Petals roundish

19416 Branchs loose downy, Lvs ovate acuminate remotely denticulated or entire 3 nerved hairy beneath at length gla-

19417 Leaves ovate-lanceolate acuminate slightly serrated, upper ones long narrow rather hairy beneath, Flowers solitary or in pairs terminal, Calyx smooth, Styles divided almost to the base

19418 Leaves lanceolate mucronate tapering to both ends, Calyx villous with coloured teeth, Bracts glumaceous permanent

19419 Flowers capitate, Leaves obovate edged with white 3-nerved, lateral nerves obsolete at apex

19420 Flowers capitate, Leaves linear-lanceolate 3-nerved glabrous, Branches flexuous glabrous

19421 Branches crowded stiffish angular glabrous like the leaves, Heads axillary many-flowered silky villous, Leaves sub-distich ovate-elliptic or rndsh 1-nerved veiny inflexed undul complicate at apex mucr glabr on edges

19422 Leaves linear opposite nerved, Flowers in little cymes disposed in long terminal racemes

19423 Leaves linear triquetrous obtuse villous, Bracts obovate downy on the back with membranous margins equal to villous tube of calyx, Flowers capitate

19424 Leaves ovate acuminated with prominent nerves

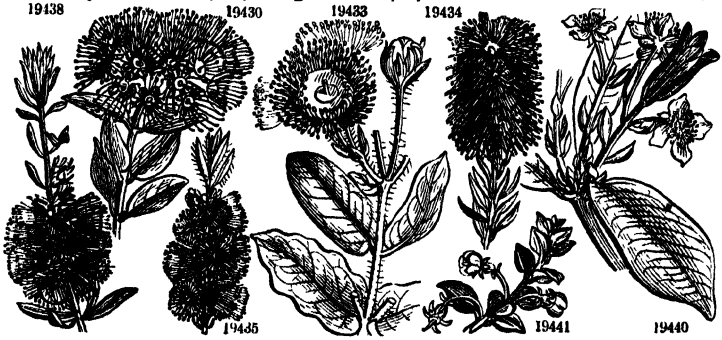
19425 Leaves linear-lanceolate mucronate, Flowers axillary on short pedicels Heads many-flowered

19426 Branches twiggy tetragonal, Leaves remote spreading decussate sessile linear-subulate channelled convex on the back mucronate, Flowers axillary twin sessile interruptedly spicate

19427 Leaves filiform plano-convex glandular mucronate, Flowers twin axillary sessile, Stamens exserted

19428 Scandent, Branches hoary, Lvs quadrifarious ovate-roundish obtuse coria shining with rev edges beset with white scattered hairs on both sides dotted beneath, Flws in upper axils terminal, Pedunes short 3-flowered

19429 Lvs oval flat emarg , Flws crims in clusts with long crims stams surrounded by a green cup-shaped wavy disk



and Miscellaneous Particulars.

3054 *Backhousia myrtifolia* is a large shrub of an elegant habit well fitted for a conservatory plant. Cuttings of young wood will strike root in sand by the ordinary method

3055 *Hypocalymma* is composed of pretty greenhouse shrubs The leaves smell of lemon when bruised. The plants should be potted in a compost of loam and heath-mould, with a small portion of silver sand. The pots must invariably be well drained, and water should be freely given during summer They may be propagated by young cuttings

1117 *Metrosideros robusta* is said by Mr Allan Cunningham to be the *Hatu* of the New Zealanders, and is a noble tree usually attaining the height of 80 or 100 feet The wood is hard, close-grained, and very durable , and hence admirably adapted for ship timbers, and in the construction of agricultural implements. The leaves have a rich aromatic odour The plant flowers in our greenhouses at the height of 3 or 4 feet. *Metrosideros tomentosa* grows best in a rich vegetable soil, but is not hardy enough to stand our winters in the open air. *Metrosideros buxifolia* climbs like ivy in its native country.

History, Use, Propagation, Culture,

3056. *Angóphora* is a genus of beautiful broad-leaved shrubs or trees with large terminal flowers. They answer well as conservatory plants. A mixture of sand, loam, and peat is the best soil for them. Cuttings of them are difficult to strike These should be taken from ripened wood, and planted in sand, placing a bell-glass over them

3057. *Callistémon.* All the species are worth cultivating in every collection of greenhouse plants, for the neatness of their foliage and the beauty of their blossoms. They are well adapted for conservatory plants Ripened cuttings strike root in the ordinary way, under a hand-glass They may also be raised from seed, which is frequently produced in this country. Plants reared from cuttings taken from flowering plants come into flower when of a small size, but those raised from seed do not flower till they become large plants.

19439. *Eugénia ternifòlia* is a fine stately species. It grows to a large tree. There are two varieties; one with white flowers, and the other with beautiful rose-coloured flowers. The fruit is edible. The leaves are very large, in fact, the largest of all the species.

19440. *Eugénia brasiliénsis*, the fruit of which is brought to the markets in Brazil under the name of *Grumichama*, has the young leaves above the flowers purplish-brown. *Eugènia U'gni* is the *Murtilla* of Feuillée, Obs. 3.

19430 Leaves oblong-ovate glabrous rather coriaceous, Corymb compound terminal, Calyx turbinate, Petals and Stamens scarlet, Fruit urceolate 5-ribbed
19431 Leaves elliptic coriaceous bluntish, glabrous above but clothed with cinereous tomentum beneath, as are the branches and cals, Corymb comp. term , Pedics 3-flwd, Cal turbinately cylind., Petals minute, Caps. smooth
19432 A charming crimson-flowered bush

19433 Leaves sessile ovate cordate at base glabrous like the branches, Peduncles and Branchlets covered with bristly hairs

19434 Leaves linear-lanceolate stiff pungent beset with scabrous dots rather villous when young as well as branches, Calyx glabrous
19435 Leaves lanceolate tapering to both ends mucronate glabrous in the adult state but villous while young, Flowers distinct spicate nearly terminal, Calyx pilose, Petals downy ciliated
19436 Leaves lanceolate acute mucronate tapering to both ends glabrous in adult state downy when young, Spikes
19437 Branches downy, Leaves linear pungent channelled, Calyx tom , Petals unequal [long slender, Calyx pilose
19438 Leaves linear-spatulate obtuse spreading with white ciliated edges, Calyx downy

19439 Leaves large 3 in a whorl 6—15 inches long and 3—6 broad, Flowers lateral

β Flowers rose-coloured
19440 Leaves oblong-obovate acuminate glabrous shining above full of dots, Peduncles from the axils of the upper scales opposite solitary 1-flowered, Calyx bractless, Lobes ciliated, Petals 4 obovate
19441 Leaves ovate acute coriaceous dotless green above and pale beneath, Young Branches upper Leaves and Petioles downy, Peduncles axillary solitary 1-flowered, Bracts and Calycine segments reflexed
19442 Leaves oval-oblong acuminated 3-nerved, glabrous above downy beneath, Lateral nerves almost marginal, Peduncles trifid or twice trifid 3—7-flowered rather hairy as are bracts and calyxes [fld, Cal. glab., Pets dwny
9443 Leaves linear mucronate with scarlet edges downy beneath 1 inch long and 1 line broad, Pedics axil solit. 1-
9444 Leaves nearly sessile elliptic-orbicular coriaceous stiff glabrous with subreflexed edges, Pedicels short 1-flowered axillary fascicled, Calyx bibracteate, Teeth of Calyx short, Petals orbicular concave
9445 Leaves 3—5-nerved very like those of a species of *Melástoma*

9446 A beautiful tree with pendent spikes of large white flowers

[axillary 4—5-flowered pedunculate, Operculum small hemispherical umbonate
9447 Leaves alternate ovate-lanceolate petiolate marginate acuminate or obtuse mucronate, Umbels terminal and
9448 Brnchs tetrag., Lvs vertical elliptic green, Peduncs axil. solit. 3-flwd compressed very broad, Cupula turb. on very short pedicel [culum hemispherical subglobose broader than the calycine cup, Fruit splachniform
19449 Leaves alternate obliquely ovate-lanc marginate feather-nerved coriaceous, Umbels terminal compound, Oper-
19450 Glaucous, Young Branches angular, Leaves alternate coriaceous dotted marginate uncinately acuminated, Corymbs terminal many-flowered, Pedicels compressed 2-edged, Operculum hemispherical umbonate
19451 Leaves alternate lanceolate almost falcate, Peduncles axillary short 1-flowered, Operculum conical length of cup which is tetragonal, but in the adult state it is depressed and mucronate in the centre
19452 Glaucous, Leaves opposite elliptic-cordate coriaceous acum. sess , Peduncs axil solit short 1-flwd, Calyx large thick, Operc. conico-hemispher acuminated, Capsule large depressed hemisph marginate woody 4—5-valved
19453 Leaves narrow-lanceolate tapering to both ends acuminate-mucronate, Peduncles axillary and lateral nearly terete, Umbels 6—8 flowered, Lid hemispherical almost mutic shorter than cup

δ Flowers dark crimson semidouble
ε Flowers single pure white
ζ Flowers pure white and full semidouble
η Two or three fruits are often produced by one flower

and Miscellaneous Particulars.

p 44 t 31 It has the habit of our common myrtle, and grows in the Bay of Valdivia. The natives call it *Ugni*, and the Spaniards *Murtilla* or *Myrtilla*. The petals are orbicular, very concave and forming, as it were, a globose corolla white tinged with red.

19444 *Myrtus orbiculàta* is called Medlar-wood in Madagascar. It requires considerable heat and a moist atmosphere. A compost of sand, peat, and loam suits it well. The pot in which it is grown should be well drained Cuttings from ripened wood strike root under a hand-glass in a moist heat.

19447 *Eucalýptus calophýlla* has the leaves 4—6 inches long, pale green with a rich red marginal line, within which runs a faint intra-marginal vein The veins are simple and pinnate ; and the whole appearance of the foliage is that of a *Calophýllum* The flowers are large and white.

19450. *Eucalýptus coccífera* has been cultivated in the gardens for many years, so that it is now more than 20 feet high , and might perhaps be hardy in sheltered situations. The leaves have the smell of myrtle when bruised

19451 *Eucalýptus glóbulus* grows in its native place from 100 to 200 feet, and has been seen as tall as 330 feet, which must be an enormous tree, and is called Blue Gum Tree.

History, Use, Propagation, Culture,

3058. *Cérasus ilicifòlia* is a small evergreen bush, first found by Nuttall, then by Coulter, and lastly by Hartweg, who reports the fruit to resemble a small cherry. The leaves are like those of the holly, and the flowers like those of the bird-cherry. The species of *Prùnus* from 7026 to 7043 belong to the genus *Cérasus*

19461. *Cratæ'gus Celsiàna.* This species is perfectly distinct from *C. tanacetifòlia* and *C. orientàlis* The tree is more robust; the leaves are larger and more deeply cut; the habit is also more fastigiate The fruit is larger, and the tree flowers much later in the season. It was first noticed by Dumont de Courset.

3059. *Lindlèya mespiloides* is a small tree with the habit of *Mespilus grandiflòra*, and with flowers as sweet-scented as the hawthorn, and it may be propagated by grafting on it. It requires protection in severe weather.

β Lobes of Calyx lanceolate length of tube, Style enclosed hardly tomentose at base
γ Lobes of Calyx length of tube, Petals narrower longer and white, Style scarcely tomentose at base, Leaves broader
δ Leaves narrower than in the other varieties

19454 Leaves ovate acuminate glabrous shining, Peduncles solitary, Lobes of Calyx shorter than the tube

β Flowers semidouble white
19455 Leaves obovate acuminate setaceously serrulated glabrous, Petioles glandular, Flowers in fascicles
[dular length of petioles, Petioles glandless
19456 Flowers usually solit- shorter than leaves, Leaves obov acuminate glandularly serrate glabrous, Stipules glan-
[Racemes leafy elongated many-flowered, Fruit ovate roundish
19457 Leaves oblong-elliptic cordate at base acuminated reticulately veined serrated glabrous, Petioles often glandular,
19458 Lvs lanc. acuminated bluntly serrated glab ous pilose in axils of veins beneath, Peduncles short rather villous
19459 Leaves coriaceous shining cordate-ovate on short petioles spiny-toothed, Racemes axillary and terminal dense-flowered, Bracts shorter than pedicels

DI-PENTAGYNIA.

19460 Spinescent evergreen, Young Branches tomentose, Leaves narrow oblong shining crenately serrated, Corymbs terminal, Calyx glabrous with rounded segments, Styles 5 glabrous, Pome depressed globose red
19461 Leaves hairy pinnatifidly cut, Sepals reflexed, Styles 5, Fruit large yellow

19462 Glabrous, Leaves scattered simple crenulate, Stipulas petiolar twin, Flowers axillary solitary pedunculate at the tops of the branches
[Bracteoles toothed, Calyx silky
19463 Leaves cordate-ovate and 3-lobed doubly serrated, Stipules leafy serrated, Racemes spicate terminal thyrsoid,
19464 Leaves cordate 3-lobed acuminated doubly serrated, Stipules entire membranous, Racemes terminal solitary, Bracts entire, Calyx tomentose

19465 Leaves linear pointed sometimes 2—3-lobed rising in fascicles, Flowers small in terminal panicles

19466 Leaves glabrous oblong mucronate narrowed at the base, Racemes many-flowered glabrous, Segments ovate acute petaloid serrated, Carpels naked

19467 Evergreen shining, Branches prostrate intertwined, Leaves linear-obovate obtuse with recurved edges downy beneath, Fruit sessile solitary recurved, Petals minute

19468 Leaves an inch long rounded at top and slightly toothed dark green above and grey from down beneath, Corymbs small terminal
[pels 5 pilose
19469 Downy, Leaves ovate-oblong acute coarsely serrated somewhat 3-lobed, Corymbs small hemispherical, Car-
19470 Branches angular, Leaves roundish oblong obtuse crenated above the middle [term. Fls white with red eye
19471 Brnchs many shining brown tufted, Lvs obov petiol serrate above middle, green above glauc ben , Cory. small
19472 Pilose, Branches angular, Leaves cuneate-obovate deeply serrated glabrous above downy beneath as are the petals, Panicles loose tomentose terminal, Calyx bibracteate
19473 Leaves glabrous oblong serrate, Panicle corymbose terminal
β Flowers white double like those of the double-flowered hawthorn [Calyx covered with silky hairs
19474 Lvs lanc. tapering to both ends ser upper sers with little brown callosities glauc. ben., Cymes branched term.
19475 Hairy, Lvs petiol ellip -lanc serr above mid. wrinkled, above dull yelsh green whitsh ben., Cory term pan.
19476 Brnchs weak terete velvety, Lvs glab ov. cren. on long stalks glauc ben , Panicles loose vill., Petals reflexed
19477 Brnchs and pedunes downy, Lvs ellip. coarsely uneq ser towards apex clothed with hoary tom. ben., Spikes
19478 Leaves lanceol lobed and serrated glabr paler beneath, Corymbs term. [crowded panicled, Carpels 5 glab.
19479 Leaves oval or obovate-obtuse quite entire villous, Corymbs crowded tomentose as well as branches
[late, Sepals villous inside
19480 Leaves lanceolate 3-lobed and pinnatifid glabrous glaucescent beneath, Racemes corymbose terminal peduncu-

and Miscellaneous Particulars.

3060 *Neillia* will, perhaps, prove quite hardy shrubs. They will grow in ordinary soil, and will strike root from cuttings planted in autumn. They will prove a good addition to our shrubberies.

3061 *Adenóstoma* is a hardy small evergreen heath-like bush, with small white flowers. The leaves are in fascicles in the axils of the primordial ones, which fall off early, and leave a pair of spine-pointed stipules behind. Their culture is the same as that for *Spiræ'a*.

Adenóstoma fasciculàtum is a pretty little shrub with the habit of *Spiræ'a*, will grow well in common soil, and is increased by cuttings.

3062 *Nagelia* is nearly related to *Cotonéaster*, and requires the same culture.

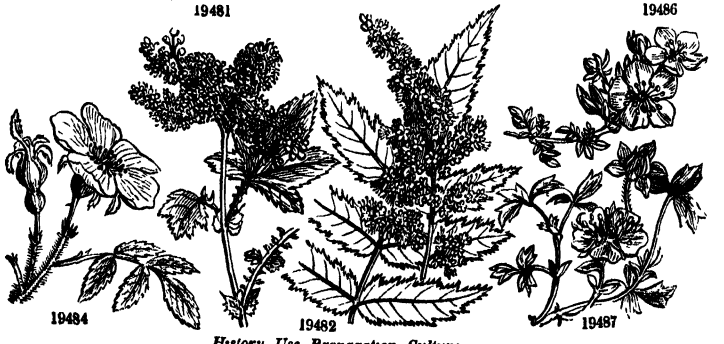
Page 456. CLASS XIII.—POLYANDRIA. STAMENS many, hypogynous, or inserted under the Ovary.

Order 1. MONOGYNIA Stamens many, hypogynous. Style 1

3064 1177*a* *Victòria*. Sepals 4, deciduous Petals numerous in several series, passing gradually into stamens as in *Nymphæ'a*, and united with them Stamens numerous, united at the base, bearing the elongated anthers cells the innermost stamens united into a monadelphous body and sterile Ovarium 27—30-celled, and 10—12 ovules in each Fruit a turbinate truncate berry, with a deep hollow disk, and a persistent central column



3065 1192*a* *Frezièra* Calyx of 5 sepals Petals 5, broadest at the base Stamens free Anthers smooth sometimes cordate. Style 3—5-cleft at apex Berry dry, 3—5-celled Cells many-seeded

3066 1192*b*. *Fréna*. Calyx 4-parted Petals 4 3-lobed at apex. Anthers 12, cordate-oblong, acuminate, dehiscing at apex. Berry dry, somewhat stipitate, indehiscent, 2—4-furrowed, 2—4-celled Cells 2-seeded

3067. 1192*c*. *Saurauja* Calyx 5-parted Petals 5, connected together to their middle Stamens many, monadelphous at the base. Styles 3—5, sometimes connected at the base. Berry furrowed, filled with shining pulp, with as many cells as there are styles. Seeds minute, angular

3068 1196*a*. *Pachystigma*. Calyx subtriphyllous Sepals unequal, concave Petals 4, conform, free, concave Stamens numerous, inserted by two series on a fleshy gynophore Ovarium globose, 7—8-furrowed, 7—8-celled Cells biovulate. Stigma large, 7—8-lobed Capsule at length dividing into 7—8 parts, stellately disposed Parts 1-seeded by abortion.

3069. 1198*a*. *Luxembúrgia*. Calyx of 5 unequal sepals Petals 5, unequal. Anthers nearly sessile, definite or indefinite, inserted on a short gynophore along with the pistil, bursting by two pores at apex, agglutinated into a

History, Use, Propagation, Culture,

3063. *Schizondtus* is a genus separated from *Spiræ'a*. They are well suited for ornamenting shrubberies The well known *Spiræ'a sorbifòlia* is the type of the genus. *S. tomentòsus*, in severe frost, is usually killed to the ground.

19481 Leaves simply palmate upper ones subhastate or lanceolate, Petioles appendiculate, Flowers corymbose, Sepals reflexed pilose, Carpels hairy parallel, Styles subcapitate
β Leaves tomentose beneath, Segments usually acuminated

19482 Leaves pinnate 5—8 pairs, Leaflets sessile ovate-lanceolate acuminate coarsely and doubly serrated, Stipules linear, Racemes forming a pyramidal panicle

POLYGYNIA.

[tioles prickly, Stipules narrow ent with gland edges free and subulate at top. Sepals entire. Flwrs clustered
19483 Glab scand, Brnchs setig. gland., Lvs tern rarely pinnate, Lflts ov.-lanc acum. sharply ser. glauc. ben., Pe-
19484 Prickles crowded nearly equal, Peduncles beset with curved prickles [purple flowers
β Habit of *R kamtschática* The variety was sent by Mr Fortune It has semidouble sweet-scented rich
19485 Habit of *R arvensis.* Leaflets 3 pair bright shining green above, Flowers as large as those of the common China rose solitary semidouble dull buff tinged with purple

19486 Shrubby dwarf hairy, Branches weak spreading, Leaves nearly sessile palmate or digitate with oblong revolute leaflets varying in number from 5 to 9, Flowers terminal with 5 lanceolate bracts, Petals roundish
19487 Hairy, Stems ascending few-flowered fruticose at base, Leaves ternate, Leaflets obovate tridentate, Stipules ovate acute entire or tridentate, Segments of calyx obovate, Petals obovate scarcely exceeding the calyx
19488 Erect, Leaves pinnate with usually 3 pairs of leaflets hoary above and clothed with white down beneath, Leaflets oblong pinnatifid, Stipules foliaceous cut, Flowers corymbose, Calyx woolly, Petals emarginate
19489 Erect downy clammy, Leaves pinnate, Leaflets roundish-ovate doubly and deeply toothed, Stipules entire, Petals obov entire [nate oblong-lanc bifid or entire, Stipulas ser., Petals veined with red

History, Use, Propagation, Culture,

19499. *Meconópsis Wallichii* is a pretty blue-flowered poppy from the Sikkim Himalayas The flowers are large and droop, they are disposed in long leafy racemes. The plant was grown in pots in a frame, but will, perhaps succeed well in the open border.

19500 *Sarracènia Drummóndi* The stove is said to be the most suitable place for this plant at a temperature of 80° to 100°, among *Orchideæ* and *Epiphytes*, at least at that time when they are making and maturing their growth at which time they require much warmth and moisture. The other species would require the same treatment They are all inhabitants of the swamps of a region which during the summer experiences a tropical heat.

19501. *Nymphæ'a elegans* will probably grow and flower in the open air. The flowers are very sweet-scented. It comes near to *Nymphæ'a ámpla*.

19503. *N dentàta* is very common in ponds in every part of Guinea, along with *Pistia Stratiótes*. The root of *N ámpla* is composed of round tubers The leaves of *N gigantèa* are 2 feet across, and the root is composed of tubers *N Devoniénsis* appears to be only a strong seedling plant of *N. rùbra*, and is not a hybrid

3061. *Victòria règia* This splendid waterlily has been found in the rivers Amazon, De la Plata, Berbice and in the river Yacuma, a tributary of the river Marmora, in Bolivia, and probably in many other lakes and rivers in South America. The plant flowered first at Chatsworth, the seat of the Duke of Devonshire, under the care of Sir Joseph Paxton; at Sion House, under the care of Mr. Iveson, and at the Botanical Gardens, Regent's Park, and at Kew, and in the open air at Mr Weeks's Nursery, King's Road, Chelsea. The whole plant is prickly, except the

MONOGYNIA.

19497 Leaves few remote pinnate, Lower segments ovate cut subpetiolate, Upper ones linear entire subconfluent, Capsules smooth [ments ovate cuneate, Upper linear cuneate, Capsules smooth

19498 Stem leafy at base, Leaves thickish glaucous pinnate, Segments deeply lobed with revolute edges, Lower seg-

19499 Tall glaucescent bristly from long rufescent hairs, Radical leaves petiolate pinnate but pinnatifid towards the apex, Lobes sinuate, Caul. lvs obl sinuate pinnate sess , Flws nodding large in long leafy race, Ovar. bristly

19500 Pitchers long straight dilated upwards ang. tapering much to base furnished with a sharp projecting rib in front with an undulated inflexed roundish blade which is covered with long hairs inside, Flowers purple

19501 Leaves nearly orbicular repandly toothed spotted with black and purple beneath with a narrow recess, Sepals 4, Petals white with a bluish tint, Stamens in 15 bundles, Outer Anthers appendiculate, Stigma 15-rayed

19502 Leaves small roundish-cordate entire, Petioles long slender, Lobes divaricate acuminate reddish beneath and dotted with violet generally bearing bulbs between the lobes, Stigmas 15 nearly sessile [pressed at base

19503 Leaves peltate sharply toothed glabrous the nerves very prominent beneath, Calyx 4-lvd vittate truncate de-

19504 said to be a hybrid between *N rubra* and *N Lōtus* The leaves and flowers are larger than those of the parents, Leaves strongly dentate, Flowers crimson

19505 Leaves peltate bluntly and sinuately toothed not dotted glabrous, Lobes incumbent, Anthers appendiculate at top, Stigma 20-rayed

19506 Leaves cordate roundish peltate toothed glabrous tubercled above and coloured beneath with a narrow sinus, Sepals dotted, Stigma 20-rayed, Anthers appendiculate, Outer ones long

19507 Lvs cordate peltate roundish thick remotely toothed, Flws large, Calyx 4-lvd, Petals numerous obtuse, Outer ones obovate, Inner ones linear-lanceolate, Stamens hiding the stigma, Anthers curved, Outer ones apiculated

19508 Plant prickly, Leaves large 5 to 7 feet in diameter and 20 or more in circumference, Flowers large more than a foot in diameter

19509 Leaves narrow oblong bluntly acuminate green above and pale beneath smooth, Peduncles solitary 1-flowered hid among the leaves, Flowers dull greenish-purple

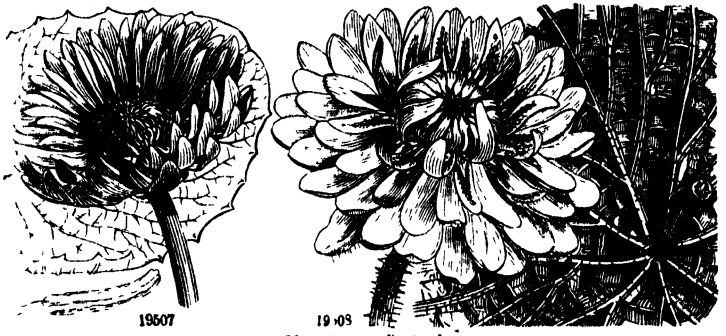
19510 Leaves elliptic-lanceolate acute serrately toothed tapering into the short petiole, Flowers nutant, Pedicels axillary nearly solitary 1-flowered, Anthers apiculated pencilled on the back, Style hispid at apex

19511 Leaves ovate-lanceolate serrated sometimes opposite and sometimes alternate, Flowers drooping on slender pedicels composed of 4—6 sepals and petals, the latter 3-cleft with 3 deep crimson stripes in the middle

19512 Branches peduncles and nerves of leaves clothed with adpressed rusty bristles, Lvs obovate-lanceolate petiolate doubly serrated, Panicle ample much branched, Petals obcordate

19513 Icosandrous, Leaves terete glabrous petiolate stipulate

19514 Icosandrous, Leaves terete petiolate downy stipulate [villous



19515 Icosandrous, Leaves petiolate with two very short stipules scabrous in the adult state as well as brcts, Branches

19516 Icosandrous hispid, Leaves linear petiolate keeled, Heads spherical, Floral Leaves villous, Bracts linear-lanceolate acuminate shorter than slender tube, Tails very slender twice as long as petals

19517 Icosandrous downy, Leaves imbricate oblong-obtuse ciliated, Brcts with membranous edges mucronate shorter than the tube of calyx, Awns twice as long as petals

19518 Icos glabr , Leaves linear-tetragonal obtuse imbricate papillose, Bracts obovate apiculate length of tube of Calyx, Tails a little longer than petals, Flowers axillary [shorter than petals, Flowers axillary

19519 Icosandrous glabrous, Leaves linear semiterete obtuse mucronate, Bracts obovate equal to calyx, Tails a little

19507 19508

and Miscellaneous Particulars.

19508 The leaves are sometimes of a prodigious size, 5 to 7 feet in diameter, and 20 feet or more in circumference, turned up at the rim all round , the under side is purple, with very strong ribs and veins radiating from the petiole which disappear at the edge. The flowers are of the same gigantic dimensions, and measure more than 1 foot in diameter, they are very fragrant, and expand in the evening about 6 o'clock , they are at first white, but as they decay towards morning they become red or pink. The plant produces seed in this country, and therefore is likely to become plentiful It requires a strong heat to make it grow freely, and is generally grown by itself in a house called a Victoria house, or aquarium.

19506 *Freziera theoides* much resembles *Thèa Bohea* both in leaves and flowers. Dr. Macfadyen states that the leaves are astringent, like those of green tea. The shrub is cultivated and propagated like an ordinary stove plant

19506 *Friesia pedunculata* is an evergreen half-hardy shrub with deep green leathery leaves. It will probably become a pretty conservatory plant. The flowers are something like those of *Andrómeda speciōsa*. The culture is the same as that for the species of *Elæocárpus*. Plenty of water will be required when the plant is in a growing state

19507 *Saurauja* is a genus of fine plants with laurel-like leaves and rather large white flowers The species will thrive in a mixture of loam, peat, and sand, and ripened cuttings will strike root under a hand glass in the usual way

History, Use, Propagation, Culture,

3068. *Pachystigma* only requires the treatment of an ordinary stove-plant, and ripened cuttings will strike root in the usual way.

3069. *Luxembúrgia.* The species are very pretty plants resembling some species of *Rhododéndron*, with showy yellow flowers and shining serrated stiff leaves. *L. ciliòsa* and *corymbòsa*, the only species ever cultivated in this

19520 Icosandrous glabrous, Branches angular, Lvs linear-obtuse carinate spreading, Bracts obovate-obtuse connate beyond middle shorter than tube of Calyx, Tails rather longer than petals, Flws axillary

19521 Icosandrous glabrous, Leaves linear semiterete obtuse imbricate, Bracts lanceolate-acuminate clammy rather shorter than tube of calyx, Tails twice as long as petals, Flowers corymbose

19522 Deciduous, Branches tetragonal, Angles winged, Lvs roundish-ovate acute glabrous glaucous green, Peduncles axillary constituting a terminal panicle

19523 Much-branched, Leaves alternate on long petioles trifoliate, Leaflets ovate-entire or obsoletely serrated full of pellucid dots, Peduncles subtrichotomously branched, Flowers fragrant

19524 Leaves alternate linear without stipules, Flowers small by twos or threes at ends of branches on naked pedicels, Sepals 5, 3 of which are oval and pointed and 2 subulate, Corolla twice as long as calyx

19525 Leaves crowded on long petioles oblong-lanceolate glandularly setose setosely mucronate, Stipules deciduous, Corymbs many-flowered, Flowers polyandrous

19526 Leaves on short petioles narrow-oblong acutish cuneated at base, Flowers large few disposed in corymbs polyandrous

DIGYNIA.

β Flowers double of a salmon colour
γ Flowers of a dark blood colour
δ Flowers semi-double rose-coloured stained and veined with deeper rose colour towards the apex
ε Flowers party-coloured
ζ Flowers small pale rose colour
η Flowers globular white and purple
θ Flowers lilac
ι Flowers deep crimson

19527 Leaves triternate, Leaflets entire ovate rugose grey and downy beneath, Petals ovate yellow, Carpels erect [tomentose recurved at apex

19528 This species is mentioned in the Hort. Soc Journ., vol 5., but without any description

TRIGYNIA.

19529 Glabrous glaucescent, Branches nearly terete, Leaves obovate-oblong and oblong stem-clasping and perfoliate denticulated opaque and smooth beh., Peduncs solitary 1-flwd scaly at base, Petals 2-lobed, Ovaries 4—5 glab.

19530 Leaves linear bluntish with revolute edges, Flowers on long peduncles digynous, Ovaries hairy

19531 Twining a little glabrous, Leaves alternate linear cordate at base and stem-clasping with revolute edges, Outer Stamens sterile, Carpels 5 glabrous 4—5-seeded

19532 Rather downy, Leaves tripartite, Lateral segments bifid or undivided, Lobes oblong tridentate or entire, Floral Leaves and Bracts nearly oblong, Spur curved length of sepals, Carpels 3 divaricate

19533 Stem branched downy, Leaves pedate multifid, Pedicels long, Spur incurved at end horizontal divided upwards

[Ovaries 3 downy

19534 Stem clothed with short deflexed hairs, Leaves glabrous above palmate-parted, Segments 3—5 pinnatifid,

19535 Stem glabrous, Leaves 7—9-parted, Segments unequally cleft, Spur spiral, Helmet constricted clavate, Ovaries 4 villous

19536 This is a pretty plant with cream-coloured flowers nearly related to *Lycóctonum*

[pressed, Ovaries silky villous

19537 Stems purple downy, Leaves 3—5-lobed ciliated, Racemes crowded, Brnchs panicled, Helmet cylindrical com-

19538 Downy, Leaves palmatifid, Segments pinnatifid, Spikes simple strict, Helmet compressed roundish acuminated, Cuculli circinate, Filaments winged, Ovaries villous [teral sepals obt., Petals renif. at top, Ovs 5 glab.

19539 Erect pyram dwny, Lvs stem-clspng cord.-ov. obt. deeply cren, Bracts 2 foliac concave, Helmet rounded, La-

19540 Stem robust glabrous, Lower Leaves petiolate ample deeply tripartite, side segments bifid all cut, upper leaves sessile 3—4-cleft segments nearly entire, Racs sub-comp., Pedicels hairy at top, Nectaries with short spurs

19541 Calyx deciduous, Petals supine hooked, Stamens pilose, Helmet arched, Ovaries 3—5—7 smooth, Panicle loose

and Miscellaneous Particulars.

country, require a moderate stove-heat, and flower during the summer months. A compost of vegetable mould, sand, and loam will answer them. They may be propagated by seeds and cuttings.

19570 *Consólida* is a genus separated from *Delphinium*, and requires the same culture and treatment as *Delphinium* pictum. It is a biennial plant.

History, Use, Propagation, Culture,

3071. *Smeathmánnia* The species are pretty shrubs with tea-like leaves and pretty white flowers. *S lævigàta* grows on the hills at Sierra Leone, and is one of the most showy plants there, it flowers so profusely. *S pubéscens* grows in the lowlands by the sides of rivulets in thickets, and is not so showy a plant as *S. lævigàta*. A mixture of loam, peat, and sand will suit them, and cuttings will strike root in the usual way They require plenty of heat and moisture when growing

19552 *Illicium religiòsum* is the celebrated Anise tree There seem to be two kinds of Anise tree the *I anisàtum* of Loureiro, the Chinese kind, and *I religiòsum* Sieboldt, the *I anisàtum* of Thunberg, the Japanese kind. By the Japanese this plant is held sacred They strew wreaths of it and branches over the tombs of their friends and their priests burn the bark as a perfume upon the altars of their deities. A singular use is made of the pulverised

PENTAGYNIA.

19542 Spurs thick curved much shorter than the lip, Pistils exceeding the stamens a little, Fruit ovoid umbilicate at base

19543 Glabrous, Spurs straight and very long at least 5 times longer than the limb, Stamens much exserted exceeding the 3—5 styles

19544 Stem many-flowered downy tomentose under the calyx, Lvs pil. beneath, Leaflets cuneated 3-lobed, Segments truncate cut, Flowers pilose, Sepals acuminated twisted round the spurs, Ovaries glabrous

19545 Radical Leaves biternate glaucous beneath, Leaflets cuneate lobed, Spurs very long straight slender twice as long as limb, Sepals rhomboid-lanceolate

9546 Downy subglandular many-flowered, Segments of lower Leaves divided beyond the middle, Flowers large, Sepals ovate-lanceolate acute, Spurs hooked much shorter than the truncate lamina

9547 Glaucous downy many-flowered, Leaves trifid cuneated, Segments 2—3-lobed, upper ones ovate entire, Flowers large pilose, Sepals ovate-lanc, Spurs reddish straight shorter than truncate lamina, Ovaries glandul villous

9548 Stem Petioles and Peduncles beset with glandular down, Spurs deep blue straight equal in length to calyx, Limb of Petals obovate, Stamens and Style shorter than petals, Fruit pilose

9549 Branches rather silky, Leaves oblong coarsely serrated acuminate t tapering into the petioles glabrous shining, Urceolus cut pilose inside [Leaves oblong serrately toothed obtuse at base, Urceolus bearded

9550 Younger branches and Petioles glandular, Ribs beneath calyxes and peduncles covered with rusty hairs,

POLYGYNIA.

γ Flowers white

9551 Leaves orbicular-rayed, Fruit obversely conical, Seeds large embedded

9552 Arborescent evergreen glabrous, Leaves elliptic quite entire tapering to both ends, Stamens 18—20, Capsule fleshy

9553 Leaves oblong-obovate acute oblique at base, serrated at top, coriaceous glabrous, Flowers in the axils of the upper leaves, Petals 5—8

γ Flowers double yellow [decomposed on short stalks, Peduncs 2 bearing involucels, Seps 5—8 ov acutish

19554 Villous, Radical Leaves ternate with many-parted segments and linear lobes, Leaves of Involucrum ternately [partite, Lobes lanceolate serrated pinnatifid, Ovaries glabrous, Fruit linear acuminate mucronate

9555 Leaves rather villous tripartite, Leaflets ovate trifid, Lobes cut acutely toothed, Leaves of Involucrum sessile tri-

9556 Leaves of Involucrum 3 sessile ovate acuminate deeply serrated, Stem pilose, Sepals 5—6 obovate

9557 Pilose, Leaves kidney-shaped 3—5-parted, Lobes trifid and toothed, Leaves of Involucrum roundish cuneate sessile trifid and toothed, Sepals 6 spreading, Carpels compressed smooth ending each in a hooked beak

9558 Young Leaves villous, adult ones glabrous, Radical Leaves on long petioles reniform 5-lobed, Segments 3-lobed, Lobes serrate, Petioles villous, Leaves of Involucrum like the rest but larger and cut, Flowers umbellate

9559 Caulis, Radical and Cauline Lvs ternately cut, Segs cord. 3 lobed uneq. serr, Lower involu Lvs petiolate cun. at base, upper ones sess, Peduncs elong. 1-flwd or dichot -brnchd, Seps about 20 silky outside, Cariopsis vil.

β A tall branchy plant

9560 Villous, Leaves roundish cordate 3-lobed coarsely and deeply crenate, Umbel few-flowered, Sepals obtuse pilose on the back, Leaflets of Involucrum foliaceous, upper ones cuneated 3-lobed, Carpels pilose

9561 Leaves ternate, Segments cuneate trifid, Lobes long linear, Leaves of Involucrum parted into linear lobes, Flowers erect, Sepals 5—6 erect connate

19562 Radical Leaves triplicately pinnate, Segments linear acute, Involucral Leaves sessile many-parted, Lobules linear 2—3-cleft, Flowers drooping, Sepals at first campanulate but at length stellate

and Miscellaneous Particulars.

bark by the public watchmen. Hollow tubes graduated on the outside are filled with the substance, which is lighted at one extremity and burns gradually and uniformly, so that when the fire has reached a certain mark, the watchman strikes the hour upon a bell, and thus announces it to the public.

9572 *Aplàcca semiserràta* recommends itself by its handsome tea-like evergreen foliage and large white flowers. It will thrive in a mixture of loam, peat, and sand; and ripened cuttings will root under a hand-glass in the ordinary way

19560 *Anemòne japónica* is hardy, and cultivated in our gardens for the beauty of its flowers A moist soil seems most favourable to its success The hybrid variety of it is a much stronger and taller plant, and at first sight looks like a small red-flowered *Dahlia*

Page 490. CLASS XIV.—DIDYNAMIA. 4 STAMENS, of which two are shorter than the others

Order I GYMNOSPERMIA. Pericarpium divided into four lobes resembling naked seeds.

3075 1263*a*. *Audsbértia*. Calyx bilabiate Upper lip concave, entire, or tridentate; lower lip bifid Throat naked Corolla bilabiate; Upper lip bifid, lower trifid middle lobe broad emarginate Two lower Stamens fertile, two

History, Use, Propagation, Culture,

19572. *Clématis indivisa* and its variety *lobàta* quite festoon the trees in New Zealand with their dense foliage and large panicles of white flowers

19576. *Ranúnculus cortusæfòlius* is the handsomest of all the buttercups. The roots are grumose. The flowers are large and yellow. The plant requires protection in winter.

3073. *Cathcártia*. This is a pretty biennial plant, and will grow in any light rich soil; but in a sheltered situation

[and alabastra, Peduncles and younger stems woolly, Sepals 6 ovate acuminated spreading
19563 Lvs simple and ternate, Leaflets coriaceous cordate acuminate villous beneath and on the branches petioles
19564 Peduncles 1-flowered stalked within the involucrum, Leaves ovate somewhat cordate toothed in fascicles
[obovate tomentose, Tails of Carpels villous
19565 Herbaceous erect, Leaves pinnate, Leaflets ovate-lanceolate entire 2—3-lobed, Corymbs panicled, Sepals 4—5
19566 Leaves ternate, Leaflets ovate-cordate broadly crenate reticulated smooth coriaceous, Flowers panicled dicecious of 6 sepals [coarse serratures, Flws small downy, Corymbs axillary and terminal downy panicled
19567 A rambling shrub with habit of *C. virginiana*, Leaves pinnate, Leaflets ovate slightly cordate acum with a few
19568 Glabrous slender, Stems angular, Leaves pinnately bi-triternate, Leaflets small tripartite, Segments ovate ent. or deeply ser., Peduncs 1-flwd solit., Seps 4 obl -obt recvd at top dwny inside Carps dwny with feathery tails
19569 Lvs tern. glab., Lflts ov.-lanc. acum ent 3-nerved at base, Peduncs shorter than lvs, Flws panic. dicecious
[minal and axillary, Sepals linear oblong at first tubular but at length revolute downy outside
19570 Erect rather downy, Leaves trifoliate on long petioles, Leaflets ovate a little lobed muer toothed, Corymbs ter-
19571 Lvs ovate cordate slightly peltate entire or slightly crenulate glabrous, Panicles axillary Sepals 4 clothed with rusty tomentum
19572 Dicecious, Flowers panicled, Sepals 5—7 elliptic silky, Leaves ternate, Leaflets petiolate ovate entire, adult ones glabrous
β Leaflets lobed

19573 Glaucous slender, Leaflets ovate reticulated, Flowers scattered in somewhat horizontal racemes
[ones palmately multifid with linear segments, Calyx spreading, Fruit oblong
19574 Downy hairy, Lvs subcoriaceous glaucous green, radical ones roundish cordate coarsely serrate crenate, cauline
19575 Root grumose, Leaves rather hairy, radical ones petiolate orbicular, lower ones 5-lobed toothed, upper ones tripartite with linear entire lobes, Stem erect few-flowered, Calyx spreading Spike of Carpels elongated
19576 Tall pil, Rad. Lvs cordately reniform, lobes lobed and toothed, caul ones nearly sess 3—5-parted. floral ones lanc, Stem corymbosely brnchd at top, Sepals villous, Head of Carp obl glob, Carp ending in a hooked style
19577 Floating and creeping, Lvs all cordate roundish subpeltate 3—5-lobed, Lobes with 2—3 notches, Carpels transversely wrinkled semi-obovate with a terminal acute point, Receptacle not setose
19578 Floating, Submersed Leaves divided into capillary segments, Floating Leaves subpeltate tripartite, Segments triangularly obovate 2—4-cleft, Carpels subobovate blunt with a subterminal point, Receptacle setose
19579 Submersed, Stems ascending, Leaves all submersed divided into numerous capillary 2—4-times forked segments, Carpels ovate compressed tipped by the long acute curved style
19580 Stems floating, Leaves all submersed 2—3-times forked, Segments elongated setaceous parallel, Carpels obovate inflated with a short straight lateral point

19581 Covered with brown villi, Stem simple Lower Lvs on long petioles cordate palmately or pedately 5-lobed, lobes lobuled, upper lvs sessile the uppermost ones pinnatifid, Peduncles terminal and axillary, Flowers drooping

19582 Leaves opposite cordate crenated downy beneath, Flowers white pedunculate

19583 Lvs digitately palmate, Segments tripartite, Peduncles very short 1-flwd, Flowers stellate or spreading, Sepals 9 lanceolate a little cut, Petals linear-cuneate rounded at apex [coloured dark purple changing to green
19584 Radical Lvs glabrous pedate, cauline nearly sessile pinnate, Stem subangular bifidly branched, Sepals roundish
19585 Lvs pedate, floral ones sessile palmate, Segments lanceolate serrated separable to the base and entire, Peduncles bifid or trifid, Sepals roundish-ovate acute petaloid white suffused with purple
19586 Radical Leaves palmate, Segments oblong-linear serrated entire at base, Stem 2-flowered, Floral Leaves nearly sessile, Sepals ovate obtuse greenish white [toothed, Sepals 8—10, Stamens and Pistils numerous
19587 Creeping radicant, Leaves broadly sheathing the stem at the base on long petioles ovate-sagittate sinuately
[Flowers subumbellate, Sepals 5 oblong-ovate, Stigmas elongated and a little hooked
19588 Stem erect leafy, Leaves large roundish toothed, Auricles large approximate, Floral Leaves deeply serrated,

---

exserted, the rudiments of the two upper ones small, club-shaped, or wanting. Anthers dimidiate Style bifid· lobes subulate.

3076 12636 *Pogógyne.* Calyx campanulate, 13-nerved Teeth lanceolate; the lower one longest. Corolla bilabiate Tube straight, exserted, naked inside Upper lip entire, lower lip trifid Stamens ascending, approximate at top Cells of Anthers distinct parallel, mutic Style villous, bifid at apex

3077 12638 *Eremóstachys* Calyx tubular or funnel-shaped with 5 spinose teeth, or the limb is large membra-

and Miscellaneous Particulars.

It would perhaps be safer to grow them in pots the first year, placing them under shelter in winter like ordinary alpine plants, and in the month of May, in the second year of their growth, planting them out in the open border

3074 *Eucrýphia* is a very pretty tree lately introduced. It will grow in a compost of sand, peat, and loam, and young cuttings will strike root if planted in sand and covered with a bell-glass.

19585 *Helleborus orientalis* is said to be the true black Hellebore of the ancients.

neous and mucroniform, Corolla with an enclosed tube, and a bilabiate gaping limb: Upper lip elongated, galeate pilose outside, bearded inside and on the margins, lower lip spreading, trifid. Two upper Filaments thickened into a blunt or fringed appendage at base. Anthers approximate by pairs Style bifid Achenia dry, hairy.

3078. 1268*b* *Colquhounia*. Calyx turbinately campanulate, 10-nerved, 5-toothed, with a naked throat. Corolla with a curved tube, naked inside, a dilated throat, and a bilabiate limb. Upper lip erect, entire; lower lip of three short entire lobes. Stamens ascending under the helmet Style bifid. Achenia oblong, smooth, drawn out into a membrane at top

3079. 1271*a*. *Bècrum* Calyx bilabiate· Upper lip decurrent, dilated, lower lip truncate, ciliated. Corolla bilabiate Upper lip 3-lobed, the middle segment cleft, lower lip oblong, concave Stamens very long Ovarium immersed in a 4-toothed disk. Stigma 2-lobed

3080 1279*a*. *Cedronélla* Calyx tubular or campanulate, 15-nerved, with a nearly equal or obliquely 5-toothed limb Corolla with an exserted tube, naked inside, a dilated throat, and a bilabiate limb. Upper lip straight, flattish, emarginately bifid; lower one trifid, with a large middle lobe Stamens ascending Style bifid. Achenia dry, smooth

3081 1284*a* *Hemándra*. Calyx campanulate striated Lips flat, closed over the fruit, upper lip entire; lower lip bifid. Corolla with a short wide tube, a campanulate throat, and a bilabiate limb. Upper lip bifid, the lower one 3-lobed, the middle lobe emarginate. Stamens glabrous Anthers dimidiate Fertile cell ascending; sterile cell descending. Style bifid at apex

3082. 1284*b*. *Monardélla* Calyx ovate, tubular, 10–13-nerved, 5-toothed Throat naked Corolla subbilabiate Upper lip bifid, lower trifid Stamens nearly equal, diverging, exserted Cells of Anthers parallel, at length divaricate. Style bifid at apex. Stigmas minute Achenia dry

Order II. ANGIOSPERMIA Seeds several, enclosed in an undivided pericarpium.

3083. 1291*a* *Chrysóthemis* Calyx campanulate, 5-toothed, with 5 projecting sides Corolla almost regular, with 2 projecting folds on the lower lip Stamens enclosed Stigmas 2-lobed Perigynous disk a notched fleshy gland

3084 1291*b*. *Collándra* Calyx free, 5-parted Corolla tubular, compressed, angular, rather ventricose, inflated at base, curved. Segments 5, equal, erectly incurved Flowers sessile, aggregate, bracteate, turned downwards Bracts and Sepals lanceolate, acuminate, jagged

3085. 1291*c* *Alloplectus* Calyx 5-cleft, coloured: Segments imbricate Corolla tubular or club-shaped Limb 5-lobed or 5-toothed Stamens with small rudiment of a fifth at base of tube Hypogynous ring swollen into a gland behind. Capsule baccate, ovate, coriaceous, 1-celled, 2-valved, many-seeded Seeds oblong.

3086. 1291*d* *Macróchlamys* Calyx regular, surrounded by petaloid bracts; the rest as in *Alloplectus*.

3087 1291*e*. *Hypocyrta*. Calyx 5-parted. Corolla tubular, gibbous behind at base. Tube ventricose in front Limb 5-lobed or 5-toothed, nearly equal. Stamens with the rudiment of a fifth behind. Anthers cohering by pairs Ovarium with a hypogynous cup-shaped disk Berry globose, coloured, juicy, 1-celled. Seeds many, fixed to two 2-lobed parietal placentas

3088 1291*f* *Episcia* Calyx 5-parted or 5-cleft Corolla funnel-shaped, gibbous behind at base, 5-lobed Stamens with the rudiment of a fifth behind Hypogynous disk swelling into a gland behind. Capsule nearly globose, membranous, 2-valved, with two bilamellate parietal placentas Seeds numerous oblong.

3089 1291*g* *Drymónia* Calyx obliquely 5-leaved, 2 interior Corolla obliquely campanulate, subringent, gibbous at base Upper lip 2-lobed, lower lip 3-lobed. Hypogynous disk bearing an ovate gland behind Capsule baccate, ovate, coriaceous, 1-celled, 2 valved, with two parietal bilamellate placentas Seeds numerous fusiform.

3090 1291*h* *Nematánthus*. Calyx 5-parted, oblique Corolla campanulately funnel-shaped, oblique, gibbous base behind, with an open throat and equal 5-lobed limb Hypogynous ring swollen into an oblong gland behind Capsule pyramidal, coriaceous, 1-celled, 2-valved Placentas 2, parietal, bilamellate. Seeds numerous, oblong

3091 1291*i* *Campánea* Calyx of 5 oval, acuminated, 3-nerved divisions. Corolla large, campanulate, hairy Limb of 5 rounded lobes Stamens enclosed, glabrous Anthers heart-shaped, firmly joined together. Disk formed of 5 yellow, fleshy, obtuse glands, surrounding the hairy ovarium

3092 1291*j* *Comádia* Calyx adnate to the ovarium, 5-cleft or 5-toothed Corolla tubular or campanulate, 5-cleft Stamens with the rudiment of a fifth behind Anthers usually cohering Glands on disk wanting Capsule dry, covered by the 5—10-ribbed calyx, flat at top, 2-valved Placentas 2, parietal Seed scobiform

3093 1291*k* *Mitária* Calyx 5 parted, equal, calyculated by a 2-lobed mitre-shaped bract Corolla tubularly ventricose Upper lip 2-lobed, lower 3-lobed Stamens exserted, with the rudiment of a fifth behind. Berry 1 celled, many-seeded

3094 1291*l* *Arctócalyx* Calyx tubularly campanulate, shaggy, smooth in its upper part. Corolla with a lacerated or fringed, 5-lobed, nearly equal limb, and a curved tube, broadest upwards.

3095. 1291*m*. *Centrosolènia* Calyx 5-parted Segments serrated Corolla tubular, spurred behind at base, the throat widened, and the limb short, 5 lobed, and spreading Stamens enclosed, with a minute rudiment of a fifth abortive filament. Hypogynous ring obscure, the hind gland large Ovarium hairy. Style dilated at apex subcapitate Fruit capsular

3096 1291*n* *Heintzia*. Calyx large, 5-parted Corolla funnel-shaped. Tube curved: Limb of 5 spreading hairy segments

3097 1291*o* *Moussònia* Calyx 5-parted Corolla ½ an inch long, curved, swollen about the middle of tube Limb of 5 spreading, nearly equal, crosely crenated segments

3098 1292*a* *Abelia* Calyx oblong. Limb 2—5-parted Segments oblong, foliaceous. Corolla tubular, funnel shaped, 5-lobed, nearly equal Stigma capitate Ovarium 3-celled, 2 of the cells contain many ovula, but they all become abortive, but the third cell contains only 1 ovulum, which comes to perfection Fruit 1-seeded, indehiscent, crowned by the foliaceous limb of the calyx.

3099 1294*g* *Spathódia* Calyx spathaceous, cleft on one side, and toothed or entire on the other Corolla funnel shaped, with a 5 lobed, rather unequal, subbilabiate limb. Stamens with the addition of a fifth or sterile filament Cells of Anthers divaricate Stigma bilamellate Capsule silique-formed, falcate, falsely 4-celled. Seeds transverse, with membranous wings

3100. 1294*h* *Adenocalýmma* Calyx campanulate, 3-toothed, rarely truncate, and rarely spathaceously cleft bearing 10 large, flattish, brown glands near the top Corolla tubular, with a nearly equal 4-lobed limb Stamens 4 fertile, and 1 sterile Lobes of Anthers divaricate, glabrous Stigma bilamellate

3101. 1294*i*. *Colea*. Calyx campanulate, 5-toothed. Corolla funnel-shaped, with a long tube a little widened at top, and a 5-parted spreading limb, having the lobes equal Style filiform Stigma bilamellate Fruit fleshy, oblong 2-celled, tipped by the style.

3102 1295*a* *Phyllárthron* Calyx campanulate, 5-toothed Corolla funnel-shaped, 5-lobed· Lobes roundish Stamens enclosed Cells of Anthers spreading Ovarium inserted in a fleshy disk. Fruit silique-formed, indehiscent Seeds not winged

3103 1297*a* *Tetranèma*. Calyx 5-parted Corolla bilabiate. Upper lip flat, emarginate; lower lip longer trifid. Stamens declinate, shorter than the corolla. Cells of Anthers divaricate. Stigma subcapitate Capsule 2 valved. Valves entire, septiferous in the middle Seeds numerous, angular.

3104 1301*a* *Dilivária* Calyx 4-parted Upper and lower segments a little larger, entire, callous at base Corolla unilabiate Lip 3-lobed Palate convex, thickened, the upper edges entire. Anthers 1-celled, with bearded ciliated margins Filaments straight Capsule 2 celled, compressed, 4-seeded from base to middle. Seeds cordate-ovate, compressed, tubercled Retinacula thick, obtuse.

3105. 1302*a*. *Asteracántha* Calyx 4-parted to base lower segment bidentate. Corolla deeply bilabiate Upper lip bifid; lower trifid, bicallous at the origin of the segments. Stamens connate by pairs at base. Anthers 2-celled, glabrous. Stigma simple, acuminate Capsule 2-celled, compressed, 8-seeded. Seeds ovate, compressed, truncate at base, smooth, propped by small retinacula

3106. 1304*d*. *Stemonacánthus*. Calyx 5-parted, equal Corolla funnel-shaped. Limb spreading, reflexed

Stamens prominent. Cells of Anthers with a broad connective and membranous edge. Stigma bilabiate Capsule contracted and seedless at base, and inflated and ovate or oblong at top, and 4—8-seeded Seeds flat, hanging by tridentate retinacula.

3107 1304*e* *Servógraphis.* Calyx 5-parted, equal Bracts and bracteoles usually subulate Corolla ringent Tube short, furnished inside with 3 silky shining bodies, or deficient stamens: Upper lip bidentate, arched, lower lip convex, trifid. Stamens 2, adnate to the tube Stigma bifid. Capsule depressed at base and seedless, compressed at apex and 4-seeded Seeds muricated, propped by retinacula which are bifid at apex.

3108 1304*f.* *Salpixántha.* Calyx small, 5-toothed, bibracteate. Corolla funnel-shaped: Limb regular, spreading, 5-lobed. Lobes retuse Stamens equal, inserted in the narrow part of the tube Ovarium 2-celled, seated on a fleshy disk Cells biovulate Style slender Stigma obtuse

3109 1304*g* *Strobilórachis* Calyx short, 5-parted Segments membranous, equal. Corolla bilabiate, with a long, narrow, recurved tube, and a broad campanulate limb Segments large Upper lip 2-lobed, lower lip trifid, with ovate, roundish segments Anthers 1 celled, acute at base Keel villous on back Stigma funnel-shaped, 2-lobed Capsule 4-seeded.

3110 1304*h* *Whitfíeldia* Calyx large, bibracteate, 4—6-cleft. Bracts usually coloured, opposite, obovate, 3-nerved Corolla campanulate, funnel-shaped Tube with 5 elevated striæ. Limb bilabiate, spreading. Fifth or sterile stamen rudimentary. Ovarium compressed. Hypogynous disk large, fleshy, cup-shaped. Style filiform. Stigma small capitate

3111 1304*i.* *Petalidium.* Calyx equal, 5-parted, enclosed by 2 valvate bracts Corolla funnel-shaped: Limb nearly equal Stamens enclosed Anthers oblong, sagittate Cells parallel, awned at base Stigma bifid Capsule 4-seeded in the middle Seeds compressed, emarginate, suspended by subulate retinacula

3112 1304*k* *Dipteracánthus* Calyx equal, 5-cleft Corolla funnel-shaped, with a nearly equal 5-cleft limb. Stamens enclosed Anthers linear-sagittate. Cells parallel, equal, mutic. Stigma bilamellate, nodulose at base. Capsule compressed at base, seedless, large and 2—8—12—16-seeded at top Seeds orbicular, compressed, girded by a tumid margin Retinacula uncinate, præmorse

3113 1304*l* *Asystasia* Calyx 5-parted Corolla rather funnel shaped, 5-cleft, nearly equal, the hind segment rather concave Cells of Anthers parallel, villous, or appendiculate at base. Capsule stipitate, tetragonal, 2-celled, 4-seeded Seeds discoid

3114 1304*m* *Hydrométra* Calyx bibracteate, 5-parted upper segments equal, acute, the fifth or hind one obtuse. Corolla funnel-shaped, bilabiate Upper lip bifid, with revolute lobes, lower lip trifid, with equal lobes Stamens equal, bearded Anthers 1-celled, bearded at base and apex. Stigma bilabiate Capsule sessile, tetragonal, 2-celled: Cells 2-seeded Seeds discoid, furnished with hooked retinacula

3115 1305*a* *Hexacéntris* Calyx small, saucer-shaped, 5-toothed or repand Bracts 2, covering the calyx. Corolla campanulately funnel-shaped Tube short Limb nearly equal, obliquely 5 cleft Stamens inserted in the throat into a bearded ring Anthers 2-celled Cells parallel, one of the upper stamens furnished with a long spur at base, and the other a short mucrone. Lower stamens with long flexuous spurs Stigma bifurcate. Capsule 2-celled. 4-seeded, rostrate Seeds crested

3116 1305*b* *Mayenia* Calyx small, 5-lobed, enclosed in 2 large bracts Corolla funnel-shaped: Throat gradually widened Tube short, closed by a pilose ring Limb nearly equal Anthers bearded at top, 2-celled Cells of upper ones unequal, tomentose, of the lower ones parallel and nearly equal, mutic Stigma membranaceously dilated 2-lipped Lips 2-lobed Capsule 2-celled at base, conico-attenuated, 4-seeded Seeds propped by a cup-shaped spongy strophiola

3117 1314*a* *Mastacánthus.* Calyx 5-cleft Segments equal, conniving in the fruit-bearing state Corolla ringent 5-cleft Segments of the upper lip 4, ovate, erect, nearly equal, lower lip of one large, spreading, incurved segment ending in a fringe. Anthers roundish Ovarium subglobose, 4-furrowed. Style bifid Stigmas simple

3118 1314*b* *Sclerdon.* Calyx campanulate, 4-toothed Corolla funnel-shaped, 4 cleft Ovarium 4-celled Cells 1-ovulate Style short Stigmas distinct, obtuse Drupe indehiscent, covered by the unchanged calyx Putamen bony Cells 4, of these 2 are abortive, 1-seeded Seeds oblong, fixed at the side

3119 1322*a* *Cassella* Calyx tubular, 5-cleft or 5-toothed. Corolla tubular, deciduous, with an irregular 5-lobed limb Stamens enclosed Ovarium 2 celled, few-ovulate Stigma capitate, undivided Fruit a berry

3120 1331*a* *Pterostoma.* Calyx 5-parted. Corolla funnel-shaped, 5-lobed Lobes nearly equal Stamens woolly, with the rudiment of a fifth Style filiform Stigma bilabiate Lower lip recurved Fruit coriaceous, capsular, indehiscent, a little compressed, having the margins broadly 2-winged, and subtubercular in the disk, 2-celled Seed solitary pendulous, produced above

3121 1362*a* *Achimènes.* Calyx adnate Limb 5-parted Lobes lanceolate Corolla tubularly funnel-shaped, usually gibbous at base, with a flat 5-lobed limb. Lobes nearly equal roundish. Rudiment of fifth stamen present Nectary glandular, annular. Style ending in a scarcely thickened stigma Capsule semibilocular, 2-valved Placentas parallel, sessile

3122 1362*b* *Nephæa* Calyx 5-parted Corolla rotate, 5-cleft 2 upper segments smallest and more combined. Stamens enclosed, nearly equal, with a fifth sterile stamen Perigynous glands wanting Ovarium 1-celled, many-seeded Stigma simple

3123 1362*c* *Diastèma* Calyx 5-parted. Corolla with a declinate tube and a 5-cleft limb Stamens enclosed, with the rudiment of a fifth Perigynous glands 5. Style bilamellate Lobes membranous, stigmatose inside. Valve of Capsule placentiferous Seeds numerous.

3124 1362*d* *Christa* Calyx 5-cleft, valvate in æstivation Corolla tubular, bilabiate Stamens 2, antheriferous Cells of anthers diverging Upper lip of Stigma abortive or very small, lower one bilamellate Capsule elongated, with striated valves Seed inappendiculate, pendulous

3125 1362*e* *Didymocárpus* Calyx 5-cleft Corolla funnel-shaped, with a ventricose throat and a 5-lobed limb Upper lip the shortest Stamens 4, enclosed, 2 of which bear anthers, sterile ones very short Anthers adnate, with transverse cells Stigma lateral, flattish, obtuse Capsule silique-formed, 2-valved, falsely 4-celled. Seeds naked pendulous Lobes of Dissepiment revolute

3126 1362*f* *Klugea* Calyx tubular, unequal at base, gibbous above, 5-angled, 5-winged, 5-cleft Corolla with a cylindrical tube, a closed throat, and a bilabiate limb Upper lip short, 2-lobed, lower lip drawn out, undivided, or a little 4-toothed Stamens enclosed Anthers reniform, 2-celled, cohering Ovarium 1-celled, girded by a complete annular disk, with 2 parietal many-seeded placentas Seeds elliptic oblong, sulcate, wrinkled transversely.

3127 1362*g* *Æschynánthus.* Calyx ventricosely tubular, 5-cleft Corolla tubular, incurved, with a dilated cam-panulate throat and an oblique subbilabiate limb Stamens exserted, usually with the rudiment of a fifth Anthers at first conniving by pairs, with parallel cells Stigma somewhat funnel-shaped Capsule long, silique-formed, 2-valved, falsely 4-celled Seeds small, usually papillose, ending in a bristle at each end.

3128 1362*h* *Agalmyla* Calyx 5-parted, equal Corolla tubular, incurved, with a dilated throat and a 5-lobed subbilabiate limb Stamens 5, exserted, of which 2—4 are fertile. Anthers linear, connected, with parallel cells Stigma bilamellate. Capsule long, silique-formed, 2-valved, falsely 4-celled Seeds minute, ending in a hair at each end

3129 1370*a* *Chænóstoma.* Calyx 5-parted Corolla deciduous funnel-shaped or salver-shaped, 5-parted Limb spreading Stamens 7 Anthers uniform, equal to the throat or exserted. Capsule glabrous, septicidally 2-valved Valves rather bifid.

3130 1371*a* *Paulòwnia* Calyx campanulate, 5-cleft Corolla tubularly campanulate, with a 5-cleft, subbilabiate limb Stigma subtruncate. Capsule woody, 2-celled, 2-valved. Valves septicidal Seeds numerous, each surrounded by a wing

3131 1372*a* *Lindenbérgia* Calyx campanulate, 5-cleft Segments foliaceous. Corolla ringent Upper lip emarginate, lower one 3-lobed Stamens enclosed Anthers approximate by pairs. Cells separate, stipitate. Stigma entire, dilated. Capsule oblong, bisulcate, 2-valved. Dissepiment duplicate Seeds small, striated

History, Use, Propagation, Culture,

3075. *Audibértia.* The species of this genus have the habit of sage, with rather a disagreeable odour. Their culture is easy, and they are readily propagated by cuttings

3076. *Pogógyne multiflòra.* The seed of this plant may be sown in a pot, and the plants afterwards planted out in the open ground.

3077. *Eremóstachys laciniàta* is an inhabitant of the Eastern part of the Caucasus on dry hills. It is difficult to

GYMNOSPERMIA.

19589 Suffruticose, Lvs oblong obtuse entire or 3-lobed downy, Limb of Corolla 5-lobed secund, Flowers solitary axillary yellow variegated with red

19590 Lvs linear 3 in a whorl with revolute edges cinereous beneath, Calyx downy silky having the teeth longer than tube

19591 Lvs 3 in a whorl linear with revolute edges green on both surfaces, Teeth of Calyx length of tube

19592 Lvs 3 in a whorl linear-lanceolate divaricate mucronate pungent with revolute edges cinereous on both surfaces as is the calyx, Teeth of Calyx very short

19593 Erect glabrous, Lvs ovate-roundish subcordate at base crenated green, Racemes loose few-flowered, Corolla with a very slender much exserted tube

19594 Downy, Lvs 4 in a whorl elliptic-linear entire or serrated, Floral leaves linear shorter than whorls, Spikes elongated

19595 Downy at top, Stem creeping, Branches erect, Leaves 6-8 in a whorl narrow linear entire, Floral leaves subulate, Flowers spicate, Calyx villous

19596 Lvs orbicular, cauline ones petiolate, floral ones stem-clasping, all deeply crenate, Teeth of Calyx subulate longer than tube, Galea oblong entire

[Calyx hispid with spinescent teeth, Lower lip of Corolla large

19597 Procumbent pilose, Lvs ovate obtuse crenated rounded or subcordate at base, Whorls 2-4-flowered remote, *β* Flowers white

19598 Plant snow-white, Lvs oblong blunt crenated, Racemes one-sided, Stamens exserted

19599 Suffruticose branched canescent, Lvs obovate obtuse entire, floral ones broad ovate, Racemes simple, Stamens exserted

19600 Floral leaves and bracts shorter than corollas, Stamens exserted

[6-flowered, Bracts subulate

19601 Clothed with floccose wool, Radical leaves cordate oblong obtuse crenated, cauline leaves lanceolate, Whorls

19602 Stm simp or brnchd a little hisp, Lvs downy, lower ones hastately cord., up flor. lvs shorter than cals, Brcts subul downy cil like cal, Whorls about 10-flwd [Brcts lin cil, Cal. cil, Galea of Cor. pil.

19603 Stem nrly simp obversely pil, Low. lvs broad ov. obt cren. cord. at base wrinkled green vil., floral lvs obl.,

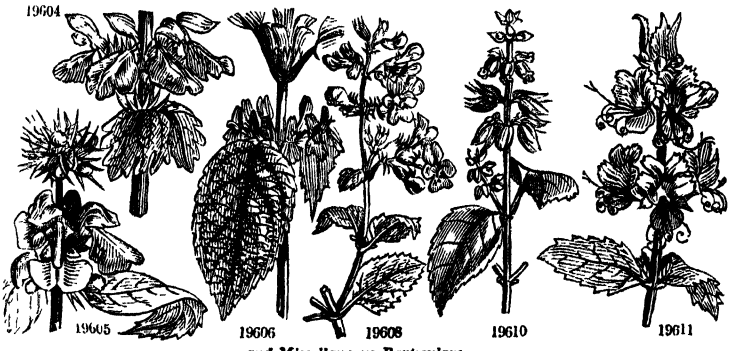
19604 Erect tomentose, Lvs ovate-lanceolate obtuse crenated downy above tomentose beneath, Bracts subulate ciliated, Calyx floccose with stiff subulate teeth

19605 Lvs pinnate, Segments oblong-lanceolate or linear deeply pinnatifid, Calyx large tubularly campanulate scarcely dilated at apex

[red in whorls

19606 Scandent, Leaves glabrous, the younger ones and calyxes canescent, Teeth of Calyx ovate obtuse, Flowers

[lary solitary 1-flowered, Corolla 2 inches long



19607 Hairy woody at base, beset with viscid glands, Leaves petiolate ovate acute coarsely serrated, Peduncles axil-

19608 Root partly creeping, Stems loose, Branches elongated, Leaves ovate, upper ones acute serrate, Cymes many-flowered stalked

19609 Suffruticose diffuse nearly glabrous, Leaves roundish or ovate petiolate entire, Whorls 4—6-flowered, Flowers almost sessile, Corolla twice as long as calyx

19610 Leaves broad-ovate acute serrated, Branches downy tetragonal, Verticels approximate racemose, Filaments a little exserted entire naked, Corolla scarcely longer than calyx

19611 Downy, Leaves ovate-lanceolate serrated, Whorls of Flowers spicate, Bracts cordate, Corolla white veined with lilac

and Miscellaneous Particulars.

Cultivate on account of the large fleshy roots suffering in winter from excess of moisture. It therefore should be planted in a dry situation. It is only to be propagated by seed.

3078 *Colquhounia coccinea* has succeeded in the open air against the south wall for two or three winters. It is a plant of easy culture and readily increased by cuttings.

3079 *Becium* should be cultivated and treated like the greenhouse species of *Teucrium*.

History, Use, Propagation, Culture,

3080. *Cedronélla cána* The leaves of this plant, and of *C. mexicàna* and *C. pállida*, abound in fragrant oil &c. They are handsome border plants, and will grow in any common garden soil, and are increased by division or by cuttings taken from the lower part of the stems.

3081. *Hemándra* is composed of shrubs nearly related to *Westringia*; and the culture and propagation are the same. Turfy peat and leaf-mould with loam is said to be the best for them.

19628. *Scutellària japónica* is a small evergreen trailing shrubby plant, well fitted for decorating rockwork It is a pretty little plant with blue spotted flowers.

19612 Stoloniferous downy, Leaves cordate-ovate crenated, Whorls few-flowered secund approximating into spikes or racemes
19613 Erect, Leaves ovate-cordate acuminated coarsely crenated almost glabrous purplish beneath, Cymes pedunculate in terminal racemes, Flowers crowded
19614 Erect, Leaves all cordate-ovate obtuse crenated downy beneath, Whorls naked spicate, Calyx tubular
19615 Erect, Lvs cord., lower ones hast.-ov. ent. or toothed hoary, Spikes long many-flwd, Whorls approx., Cal. tub.
19616 Shrubby, Leaves ternate, Leaflets oblong-lanceolate, Whorls collected into terete oblong spikes

19617 Downy, Leaves ovate acuminated on long petioles, floral ones deciduous, Racemes panicled, Whorls cymose, Fruit-bearing Calyx nutant

19618 Glabr. or nearly so, Lvs ovate-oblong narrowed at base glandular on both sides toothed or cut, Racs few-flwd
19619 Branchlets downy, Leaves linear glabrous glandular beneath denticulated above, Calyx pilose ciliated
19620 Glabrous, Leaves linear entire, Racemes terminal, Calyx ciliated
19621 Leaves roundish crenated downy, Racemes dense few-flowered, Calyx downy with entire lips
19622 Leaves orbicular crenated glabrous glandular on both surfaces, Flowers axillary, Lower lip of Calyx retuse
19623 Leaves rhomb-orbicular entire glandular beneath shining above, Branches and Calyxes downy, Flowers axillary [lip of Calyx acuminate prickly, lower one shorter inflexed often recurved
19624 Glabrous or with a few spreading hairs, Leaves linear spreading, Peduncles much shorter than calyx, Upper
19625 Erect downy, Leaves linear-oblong complicate pungent 3 nerved, Calyxes nearly sessile villous with pungent segments, Upper lip of Corolla rounded emarginate

19626 Procumbent at base ascending at top, Leaves oblong-linear obtuse undulated glabrous, Outer Bracts broad-ovate, Calyx villous tubular

19627 Ascending smoothish, Lvs sessile lanceolate obtuse entire ciliated, Floral Leaves longer than calyx, Racemes simple, Flowers opposite secund, Calyx pilose Corolla downy outside [rolla elongated
19628 Small evergreen trailing, Stems quadrangul., Lvs petiol. somewhat spoon-shaped serrated obt., Racs term., Co-
19629 Erect, Lvs ov. coarsely serr. acum. downy beh., Racs term., Cor elong. dilated above, upper lip hardly cleft
19630 Erect downy glandular, Leaves cordate-ovate bluntish coarsely serrated on long petioles, Racemes terminal subsecund, Corolla elongated, upper lip bifid
19631 Erect hairy glandular, Leaves roundish-cordate wrinkled acute on long petioles coarsely toothed, Flowers subverticillate glandularly hairy, Corolla elongated

19632 This differs but little from *P. vulgàris*, and is only, probably, a variety of

ANGIOSPERMIA.

[with a long tube, upper lip straight 2-lobed
19633 Leaves whorled cordate-oblong toothed downy, Panicle subverticillate, Pedicels long umbellate hairy, Corolla
19634 Leaves opposite on long petioles cordate-ovate concave tomentose rugose, Racemes simple, Pedicels elongated, Tube of Corolla long inflated beneath, limb 5-lobed, Hypogynous glands 2
19635 Leaves large opposite petiolate cordate-ovate crenated downy, Panicle branched glabrous, Pedicels elongated, slender aggregate, Flowers pendulous, Corolla glabrous clavately cylindrical, Hypogynous glands 2
19636 Stem a horizontal rhizoma, Lvs broad-ov. toothed cord. at base downy, Pedunc. from base of rhizoma [lobes long wavy, limb nearly equal, Root a round tuber 1 to 1½ inch in diameter
19637 Tubers scaly, Leaves opposite bluntly serrated, Peduncles elongated drooping, Corolla large tubular erect, lower
19638 Tubers scaly, Lvs opp. cordate serrated petiolate, Racemes ample terminal, Flowers on long peduncs drooping, Cor. scarlet above yellow below [Cor. villous cylind. gland., limb 5 lobed, Hypog. glands 4—5
19639 Hairy, Lvs opposite or 3 in a whorl pet. ovate or obov. acute serr., Racs term., Peduncs 1-flwd fascicled whorled,
19640 Downy, Leaves opposite petiolate lanceolate serrated, Racemes terminal, Pedicels whorled fascicled, Corolla villous cylindric ventricose, limb of 5 linear lobes
19641 Villous, Leaves 3 in a whorl oblong narrowed at base canescent, Peduncles short axillary 3-flowered, Pedicels elongated, Lobes of Calyx subulate, Corolla cylindrical contracted at base lobes rounded equal
9642 Downy, Leaves 3 in a whorl, lower ones opposite elliptic-ovate obtuse crenated sessile, Panicle loose, Corolla elongated curved hairy, upper lip long bifid, Hypogynous glands 5 combined
8 Leaves opposite lanceolate-ovate unequal at base on long petioles serrated downy, Peduncles 4-flowered umbellate, Corolla villous tubular rather constricted at throat

and Miscellaneous Particulars.

1290 *Gésnera.* M. Decaisne has proposed to divide this genus into several, applying the name *Corythrolòma* to *G. striata, sceptrum, ignea, Märcki*, &c., *Isolòma* to *G. vestita, spicàta, móllis, longifòlia, brevifòra*, &c., *Diacæ'a* to *G. bulbòsa, fauciàlis, laterìtia*, &c.; *Hoùttea* to *G. pardina* and *Gàrdneri*, *Tyda'a* to *G. picta*, *Rechsteinera* to *G. calliphýlla*, &c., and the true *Gésnera.* he limits to *G. tuberòsa, cochleàris, macrostàchya, discolor, polyántha, purpùrea*, and the like. Perhaps these alterations may be the means of restoring order among the confused mass of plants referred to the genus *Gésnera*.

3092 *Monardélla* will grow well in the open peat border, and is increased by division.

Besleria bicolor H B & Kth, as well as *Besleria cristàta* L No 8925, belongs to this genus.

History, Use, Propagation, Culture,

19648. *Gésnera breviflòra*, if treated like *Achimènes*, may be had in flower nearly all the year.
3083. *Chrysóthemis* is a genus separated from *Besleria* by Decaisne. It consists of two known species, both of which have an orange-yellow corolla streaked with carmine, enclosed in a calyx of 5 wing-like sinuses. The culture of the species is the same as that for *Besléria* or *Gloxínia* They grow best in loose peat soil or decayed vegetable mould. *C. aurantiaca* is a showy fleshy plant, having a cinnabar-coloured calyx and purplish pedicels The corolla is yellow, with lines and dots of carmine on the face; velvety outside, and smooth inside.

19643 Downy, suffruticose, Leaves 3—4 in a whorl on short petioles oblong-lanc. wrinkled crenated tomentose ben., Peduncs axil aggregate 1—3-flwd, Cor. villous camp. fun -shaped, ventric. below, limb short, Hypog. glands 5

19644 Brnchs tetragonal, Lvs opposite ovate serrated wrinkled on short petis hairy, Peduncs solitary twin or tern, 1-flwd, Corolla hairy tubular ventricose, limb equal spreading, Hypogynous glands 5

19645 Downy, Lvs opp. ellip wrinkled ser. lower ones petiol. upper ones ses , Peduncs terminal racemose and axillary solitary, Tube of Cor. with 5 gibbosities at base, Limb obliquely bilabiate, Hypogynous glands 4

β Corollas yellow [ben , Peduncs axil 3-fid, Cal. woolly, Tube of Cor. ventric. hairy, limb contracted

19646 Stem erect nearly simple bluntly tetrag. clthd with rusty tom , Lvs opp. large ov. acum. ser wrinkled woolly

19647 Humble simple shrubby, Lvs rosulate approx obov -lanc glab. wrinkled scab obtuse coarsely ser., Petios hairy, Peduncs axil 1-flwd hairy, Cal. turbinate pilose 5-lobed, lobes foliaceous, Corolla pilose, Epigynous glands 5

19648 Villous, Leaves opposite oval petiolate crenated convex, Peduncles 1-flowered axillary 4 together shorter than petioles, Corolla villous, limb 5-cleft equal [late, Corolla hairy, limb 5-lobed reflexed spotted

19649 Leaves opposite ovate serrated downy as are the branches, Pedicels elongated umbellate, Lobes of Calyx subu-

19650 Dwny, Lvs on short petios ellip thickish ser glab above tom ben., Peduncs axil solit. 1-fid, Cor. with curved tube and spreading spotted limb, Stamens exserted, Calyx segments large spreading [Cor. drooping

19651 Stem terete downy, Lvs opp on long petis rndsh-cord , Rac term. erect, Bracts subu. involute, Pedic. long erect.

19652 Hairy erect, Lvs opp or tern ov acum serr. lower on long petis, Rac elong leafy, Pedicels whorled, Cor. cylnd. contracted at the mouth, Hypog. glands 5 [top, limb 5-lobed, Hypog glands 5, 2 upper ones joined

19653 Downy, Lvs 3 in a whorl peti ov cren., Whorls of Fls num , Pedics longer than cor., Cor. droop. cylind. glb. at

19654 Glab , Lvs opp on short petis ellip. fleshy ser , Peduncs solit. 1-fid axil , Cal. segs acum , Cor downy tubular, Perigynous ring 5-lobed [lanc. acum 5-nerved, Cor. downy outside green spotted with purple

19655 Suffrut erect-brnchd vil , Lvs obliquely-obl. ser acum , Corymbs axil on long peduncs 2—3-fid, Cal. segs ov.

19656 Epiph. subshr , Lvs obliq.-oblng, Fl greenish hairy spotted with purp 1½ inch long, with curved swollen tube

19657 Suffruticose climbing hairy, Leaves obliquely elliptic unequal in size petiolate coarsely serrated, Corymbs axillary on long peduncles 4—5-flwd, Cal segments ovate acute 3-nerved, Cor large greenish spotted with purple

19658 Root a tuber, Stem branchy, Lvs oblong-ovate crenate, Flowers numerous axillary solitary covered with glandular down, pale outside and spotted inside [near reflexed, Lobes of Corolla concave

19659 Stem erect simple spotless, Lvs broad subobliquely ovate obscurely serrated, rather pilose above, Cal segs li-

19660 Root tuberous, Stems short vil. as are the lvs petios and peduncs, Lvs ov wrinkld crenated acutish glauc , Flwrs large nutant deep rich violet [tracted purplish crimson, segments of limb regular roundish

19661 Root tuberous, Lvs broad-ov obt. rigid slightly hairy, Flwrs axil chiefly at tops of stems, Cor long and con-

19662 Caulescent downy, Lvs oblong subcrenate, Panicle terminal, Peds elongated, Cor salver-shaped, tube elongated, limb spreading, lobes unequal, Hypogynous glands 4

19663 Stem erect simple subtetragonal, Leaves ovate acute serrated glabrous, Peduncles axillary solitary 1-flowered, Segments of Calyx foliaceous, Corolla funnel-shaped, Lobes nearly equal with wavy finely fringed edges

19664 Erect velvety at top, Lvs ovate acum coarsely crenated, Cymes axillary about 3-flwd, Sepals about equal to tube of corolla lanceolate acuminate subserrated, Lobes of Corolla quite entire, Fruit capsular

19665 Leaves ovate-elliptic acuminate crenulate bullate hairy, Peduncles axillary 3-flowered, Pedicels purplish, Calyx with unequally toothed segments

19666 Clothed with yellow silky hairs or down, Leaves opposite nearly sessile unequal-sized, one obovate oblong denticulate, the other much smaller ovate, Flowers sessile aggregate, Bracts jagged, Corolla tubular

19667 Shrubby scandent, Leaves obovate obtuse acuminate toothed with a few adpressed hairs spotted with purple beneath, Peduncles axillary sessile, Sepals serrately jagged woolly, Corolla villous gibbous subbilabiate

[denticulated glabrous, Corolla clavate hairy yellow

19668 Erect, Leaves ovate-oblong entire, Flowers axillary nearly sessile aggregate, Sepals triangular blood-coloured [tricose above the mouth oblique

19669 Erect, Leaves oblong-elliptic entire glabrous, Flowers axillary nearly sessile, Corolla hairy, clavate, tube ven-

19670 Robust, Stem bluntly tetrag red, Lvs large ov ser. downy reddish beneath, Peduncs axil , Flwrs capit , Seps red foliac cucul toothed, Cor. silky, ventric above the middle [tube and 4 lobed limb, upper lobe bifid

19671 Downy, Lvs ov rather fleshy ser ou short petios, Peduncs axil solit., Seps ov. acute spotted, Cor with curved

1967 Erect glabrous, Leaves elliptic obtuse shining, Peduncles axillary aggregate 2—3 together 1-flowered bibracteate, Calyx lobes serrated, Corolla ventricose in front, with a contracted 5-toothed limb

19673 Leaves oval on long petioles smoothish entire, Flowers solitary, Segments of purple Calyx imbricate discoloured, Corolla villous, limb small erect, Gland large without a ring

19674 Erect rather woody, Branches tetragonal, Leaves ovate oblong acuminate denticulated pilose above downy beneath, Pedicels axillary 1-flowered, Lobes of Calyx ovate acuminate, denticulated, Corolla pilose

and Miscellaneous Particulars.

3084 *Collandra* is a genus separated from *Gésnera* by Lemaire, and consists at present of several known species, which are all readily distinguished by the inequality of each pair of leaves, one of which is always much smaller than the other, like those of *Goldfússia anisophýlla*. Most of the species have also, at the points of the leaves, a large blood-coloured spot, for which reason they are called *Yerba de la Doncella*. Their culture is the same as that recommended for *Gesnera*.

3085. *Alloplectus*. The species grow best on loose peat soil or decayed vegetable mould.

3086. 1291*d*. MACRO'CHLAMYS *Decaisne*. (*Makros*, long, *chlamys*, a covering ; calyx involucel by bracts.) *Gesn.*

History, Use, Propagation, Culture,

3086 *Macróchlamys* includes the species of *Allopléctus* with coriaceous glabrous leaves, and the calyx surrounded by petaloid bracts, hence the name. Their culture is the same as that for *Allopléctus*

3087. *Hypocýrta gracilis* has the leaves spotted with red beneath, and its culture is the same as that of epiphytal *Orchideæ* It may be allowed to grow over an elevated substance, covered with sods, kept moist or in baskets.

3088. *Episcia*. The culture and treatment recommended for *Drymònia* will answer for this plant.

3089. *Drymònia punctàta* has the limb of its corolla dotted with purple. The plant does well cultivated in a wire basket, filled with pieces of wood and turf, suspended from a beam in a moist stove. The other species may be treated in the same manner.

3090. *Nematánthus ionèma* has red drooping flowers. It may be either grown in a pot of turfy peat soil, or in a basket suspended from the rafters, as many epiphytal tropical *Orchideæ* are.

3091. *Campània grandiflòra*. A beautiful herbaceous plant, requiring to be grown in a temperate stove The stem is scandent, woody at the base. The leaves are opposite, oval, stalked, hairy, unequal at base, taper-pointed, and crenate-toothed. The flowers are axillary, on long peduncles at sides of shoots, terminal few on long peduncles, large, showy, nodding, irregularly campanulate, the tube curved and ventricose beneath ; the border or limb oblique with 5 broad, nearly equal, emarginate, spreading lobes, white, downy outside, elegantly marked with close dotted lines of rosy purple.

19675 Scandent fleshy, Leaves petiolate ovate-oblong acuminate nearly entire, Peduncles axillary few-flowered, bearing ample roundish obovate subciliated coloured bracts, Corolla downy outside

[tubular, lobes spreading

19676 Ascending radicant, Leaves ovate acute denticulated, Peduncles axillary solitary or twin, Corolla campanulate
19677 Stem erect villous above, Lvs obl -acum. mucron strigillose, Flws axil solitary, Cor. much swollen in front, limb contracted 5-toothed [gate, Cor tubular villous contracted at the mouth
19678 Erect downy, Stem bluntly tetragonal, Lvs opposite oblong lanceolate wrinkled serrated, Pedicels axil aggre-

[slender, Seps lin.-lanc. recur., Cor. purp with oblique white mouth a nearly equal 5-lbd limb and ruded lbs
19679 Dwarf hairy decumbent, Lvs cordate-ovate acute serrated with impressed veins, Peduncs axil short simple bifid

[late serrated, Limb of Corolla dotted with purple spreading fringed

19680 Leaves oval on long petioles serrated downy, Flowers axillary nearly sessile, Sepals unequal lanceolate spatu-
19681 Radicant downy, Leaves oval-lanceolate acute at both ends denticulated of a different colour beneath, Flowers axillary solitary, Sepals cordate foliaceous serrated, Corolla glabrous, Segments serrulated
19682 Radicant downy, Leaves broad coarsely toothed green, Flowers solitary axillary, Calyx foliaceous, Corolla lacerated pale-green

19683 Pedicels longer than the leaves, Calyx quinquefid divided beyond the middle

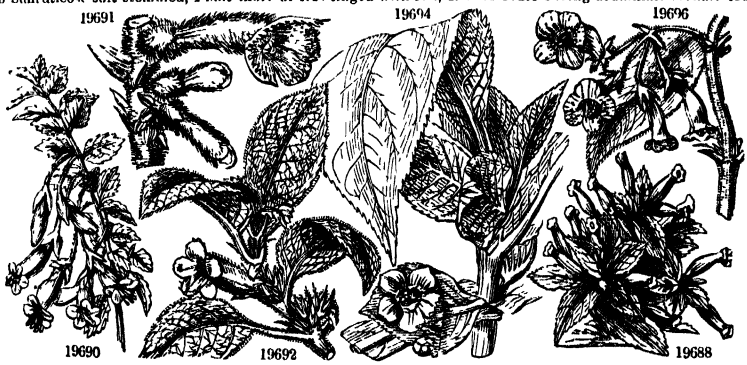
19684 Leaves ovate-lanceolate, Calyx violet hairy, Peduncles very long 6-12 inches hairy

19685 Peduncles hardly exceeding the leaves, Segments of Calyx about 3 times shorter than corolla
19686 Climbing or trailing, Leaves ovate-oblong acuminated fleshy, Flowers axillary mostly solitary, Pedicels long slender hairy, Segments of Calyx lanceolate hairy, Corolla large downy outside spotted inside

19687 Hairy, Leaves opposite oval acuminated oblique soft crenated stalked, Flowers in tufts at ends of long axillary and terminal peduncles, Corolla white lined and dotted with crimson

19688 Leaves oblong, Flowers axillary numerous
19689 Leaves large obovate-oblong, Flowers axillary almost hidden among the leaves

19690 Climbing radicant, Leaves small ovate acute serrated, Peduncles long slender axillary solitary 1-flowered



[veins beneath, Flws springing from all parts of the stem sessile, Cor yellow, with lines and dots of crimson
19691 Stem shaggy blackish brown, Leaves fleshy oval unequal at base doubly serrated shaggy with long hairs on the

[crenated, Filaments pilose at top

19692 Leaves nearly equal oval or obovate velvety painted serrated on long petioles, Corolla hairy, lobes obscurely
19693 Leaves opposite of unequal size, the large one oblique oboval-oblong serrated pilose on the ribs beneath, small leaf lanceolate, Corolla downy, lower lobes fringed
19694 Tall, Stem succulent, Lvs nearly equal large ovate acuminate coarsely and unequally serrated perfoliate at base, Peduncles short axillary many-flwd, Flws aggregate bracteate, 2 outer bracts large concave orbicular acuminate, Lobes of Corolla entire

19695 Leaves lanceolate serrate, Cymes axillary with rose-coloured bracts

[on short petioles, Peduncles umbellate 3—4-flowered axillary
19696 Suffruticose soft-stemmed, Plant more or less tinged with red, Leaves ovate-oblong acuminate crenate-toothed

and Miscellaneous Particulars

3092 *Columnea* requires the culture and treatment of *Gesnera*.
3093 *Mitraria coccinea* will perhaps succeed in the open air. A compost of leaf mould, loam, and peat is the best soil for it

3094 *Arctocalyx Endlicherianа* is a remarkable looking epiphytal shrubby plant, shaggy all over Stems radicant, usually simple, corolla 2 inches beyond the calyx, yellow It requires a cool humid stove or orchideous house, and is readily propagated by cuttings of the stem.

3095 *Centrosolenia picta* has the leaves blotched and mottled. The corollas are large and white. It is a creeping plant, and grows well in places suitable for tropical epiphytal *Orchideæ*. Light peat soil or leaf mould suits the species best. The other species require the same treatment.

3096 *Hantzsia tigrina* is a robust soft-stemmed soft-leaved subshrub, 3—4 feet high. The leaves are a foot long, green, with a bluish tinge. The calyx is large and rose-coloured, also the bracts The corolla is white, an inch long, the segments studded on the face with soft hairs, which produce a silky and spotted with purple gloss. It is a coarse-looking plant, the flowers hid by the leaves. It flowered for the first time in this country at Messrs Henderson's nurseries, near London, in 1849.

3097 *Moussonia elegans* is a pretty shrub, and requires a temperate stove. The stem and leaves are soft and hairy, and more or less tinged with red. The corolla is scarlet, about half an inch long; the segments yellowish inside, with lines of purple spots, the throat yellow. The plant is of the most easy culture and propagation.

History, Use, Propagation, Culture,

3098. *Abèlia* These shrubs are generally treated as rather tender, and are either kept in a frame or a cold part of a greenhouse, but are probably hardy enough to stand our milder winters. Rough sandy loam, with the addition of a little peat, is the soil that appears to suit them best. They are free growers, and therefore require plenty of water during their growth. Cuttings from young wood strike root readily. The flowers are sweet-scented

3099. *Spathòdea laˈvis* is a pretty plant, and grows best in a mixture of light loam and sand, and cuttings strike root if planted in white sand. The corollas are white, spotted and streaked with red. *S. speciòsa* is a splendid plant, with terminal panicles of pink flowers, stained with purple. It has been cultivated in a mixture of decayed leaves and rotten dung, mixed with one third of peat and one third of loam. Cuttings are said to be difficult to strike

3100. *Adenocalýmma comòsum* is a splendid climber; trained to the rafters in a stove it makes a fine appearance with its copious flower buds, which look like large clusters of hops; and as soon as the bracts fall the conspi... yellow blossoms burst forth in all their beauty. It requires the same treatment and culture as the climbing hot

[volucrum none, Sepals 5 obovate ciliated, Corolla downy 5 cleft, Stamens exserted

19697 Branches downy, Leaves ovate distantly serrated glabrous except the midrib beneath, Peduncles 2-flowered, In-
19698 Leaves ovate obtuse reticulated glabrous ciliated, Peduncles nearly terminal axillary 1—3-flowered bibracteate, volucrum small 1—3-toothed, Corolla tubular nutant, Stamens and style exserted

19699 Lvs ovate-lanc nearly sessile ciliated, Flws by threes, lateral ones tribracteate, Calyx villous 5 parted, segs linear acum length of tube of cor. [tomentose, Stamens a little exserted

19700 Lvs ov coriaceous opposite or tern entire and serrated glabrous, Peduncles 1—3-flwd, Sepals 2 obtuse glab., Cor

19701 Leaves conjugate, Leaflets lanceolate acuminate, Petioles downy, Peduncles 1-flowered, Calyx bilabiate 5-lobed, Corolla glabrous, limb deeply 5-parted crinated, segments emarginate

19702 Lvs conjugate, Lflts obl entire acum rather cordate at base glab, Tendrils 3 hooked Cal. cup shaped entire

19703 Leaves conjugate, Leaflets obovate-oblong shining, Peduncles terminal 2-flowered, Stamens enclosed

19704 Lvs conjugate, Lflts cordate acum. rather downy, Pans term few-flwd, Cal camp truncate downy obsoletely 5-toothed, Cor arched downy with curled spreading segments [Cor spreading wavy

19705 Lvs simple and conjugate, Lflts obl or obov -obl acute, Pedans 2-flwd, Cal camp, Teeth subulate 1 obes of

19706 Lvs tripin, Lflts 3—9 lanc. entire glab, Panicle terminal trichot, Calyx bluntly 2-lobed Cor downy outside

19707 Leaves impari-pinnate downy beneath, Leaflets obovate-oblong mucronate sessile, lowest pair close to the stem, Panicle terminal clothed with rusty down, Corollas large tomentose outside

19708 Leaves impari-pinnate glabrous shining, Leaflets 5 oblong-lanceolate entire acuminated pale beneath, Panicle terminal trichotomous

19709 Lvs impari-pinnate very variable, lower ones smallest with 11 pairs of unequal-sided deeply crenate leaflets the term lflt always lrgst, Petioles winged articulated, Lflts as they ascend become larger fewer and more entire

19710 Arborcous glabrous, Leaves pinnate, Leaflets 2—3 pairs on short stalks, the terminal one on the longer stalk ob-
ovate entire at base and serrate at top Capsule silique-formed compressed very long

19711 Glab, Lvs pin tern verti, Lflts obl-lanc acum shining ser Pans term Calyx spathaceous split on one side

19712 Glabrous, Leaves alternate pinnate 4—5 pairs, upper ones ternately verticillate, Leaflets ovate acuminated unequal-sided serrated, Racemes terminal corymbose, Corolla glandular with unequal rounded curled lobes

19713 Arborcous glabrous, Leaves pinnate, Leaflets many pairs broad-ovate acuminated undulated serrate, Panicles terminal thyrsoid, Limb of Corolla bilabiate often 6 lobed pentandrous with the rudiment of sterile stamen

[velvety, Bracts narrow glandular, Calyx 5-toothed velvety glandular, Corolla velvety

19714 Glabrous, Leaves trifoliate or conjugate tendrilled, Leaflets elliptic oblong, Racemes axillary nearly terminal

19715 Glabrous, Leaves trifoliate and conjugate tendrilled, Leaflets ovate cornaceous glandular, Racemes spike-formed axillary and terminal, Bracts comose under vernation, Calyx 5-toothed glandular

19716 Leaves pinnate verticillate 8 pairs, Leaflets oblong-lanceolate pointed, Flowers in fascicles nearly sessile rising from the old wood

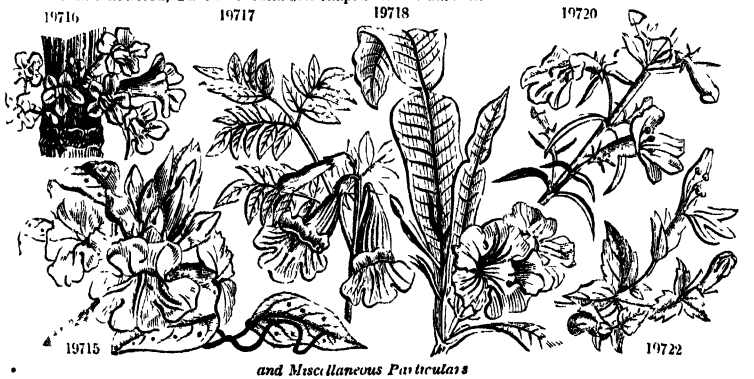
19717 Leaves bipinnate with 3—5 pairs of pinnæ, Leaflets ovate-elliptic acute tomentose in the young state and beneath in the adult state, Branches downy, Corollas silky

19718 Branches and Peduncles trigonal or 2-edged, Petioles articulated, young ones viscous, Joints 2 broadly marginate, lower joint obovate, upper one elliptic, Racemes terminal trichotomous corymbose

[flowered, Peduncles 2-flowered, Cal glandular, Corolla glandular with ciliated segments, Anthers glabrous

19719 Suffruticose glaucous downy Leaves ovate, radical ones narrowed into the petioles, Racemes loose secund few-

19720 Glaucescent, Leaves entire, lower ones linear-lanceolate upper ones linear, Racemes twiggy, Sepals ovate acuminate, Corolla ventricose beardless, Sterile filament glabrous, Anthers fringed at top



19721 Smooth glaucous, Leaves linear-lanceolate entire, Racemes terminal 1 foot long, Peduncles axillary 1—2-flwd

19722 Shrubby trailing, Lvs shining cord ser. downy, Fls in nar 1-sided leafy hairy pans, Cor covd with gland hairs

19723 Glauc green, Lvs entire, radical ones obl-spatu cauline ones ses cord acum., Peduncs axil subverticil forming a leafy raceme Sterile filament hairy [elongated, Calyx segments ovate

19724 Glandular downy, I vs glabrous spinosely ser, lower ones spatu. middle ones obl upper ones roundish Panicle

19725 Tall, Leaves lanceolate, upper ones stem clasping acum smooth, Panicle long leafy at base, Peduncles short more than 1-flowered, Tube of Corolla bell-shaped Sterile filament smooth

and Miscellaneous Particulars

Species of *Bignonia*, from which it has been separated *A. nitidum* is said to be a shy flowerer and has been found to grow best in a large tub, in a mixture half light loam, a quarter peat, and a quarter leaf mould

19701 *Cobæa floribunda* is a noble plant, with a perfectly simple stem, furnished with large pinnate leaves at the top only, and bearing flowers of a bright yellow ochre on the old wood, from just above the place whence the leaves had fallen the previous year The culture and treatment are the same as for the upright hothouse species of *Bignonia*

19702 *Phyllárthron Bojerianum* is a beautiful and singular plant. The leaves or broad petioles are curious, being composed of two joints. The plants require the same treatment as the upright hothouse kinds of *Bignonia*.

19722 *Pentstemon cordifolius* has little the appearance of the genus in habit, but being a trailing shrubby plant it is well-fitted for decorating rockwork. The flowers are of a rich dull red or scarlet.

19725 The *Pentstèmon gentianoides* figured in Bot reg and Bot. mag with long narrow scarlet flowers should be called *S. Hartwegii*, according to Paxt. Fl gard ; but why, we are not told.

History, Use, Propagation, Culture,

3103. *Tetranèma mexicàna* is a pretty little plant, blossoming profusely. It is easy of cultivation, and is propagated readily by division and seed A light rich soil suits it best.

19730. *Martýnia frágrans* is a half-hardy annual. The flowers are large, of a beautiful purple, and very fragrant The culture and treatment are the same as for Balsam

3104. *Dilivária ilicifòlia* is a pretty holly-leaved plant. It can only be propagated by seed.

3105. *Asteracántha* requires the same culture and treatment as recommended for *Barlèria*

3106. *Stemonacánthus*. The same treatment and culture as recommended for the species of *Ruéllia* will suit this plant.

3107. *Sericógraphis* is a very handsome winter-flowering plant. The flowers are tubular, of a bright purplish red The cultivation and propagation of the plant are the same as for *Ruéllia*.

3108. *Salpixántha coccínea* is a splendid shrub, with its pretty graceful scarlet pendent blossoms. Its culture and propagation are the same as for *Ruéllia*.

19726 Stem downy, Leaves ovate-lanceolate entire glabrous, Segments of Calyx ovate, Corolla downy beardless, Sterile stamen glabrous, Peduncles 2-flowered downy

β Flowers pale below semidiaphanous, Stems green, Calyx and Corolla glandularly villous [Cor vent.

19727 Glab glauc, Lvs remote, lower ones obl upper ones obl.-ov. cord ses., Racs elong. bract, Peds oppo 2-flwd.

19728 Tall green, Leaves oblong-spatulate, cauline ones lanceolate sessile stem-clasping entire, Peduncles many-flowered axillary forming a spicate leafy panicle

19729 Almost stemless, Peduncles long numerous, Flowers corymbose

19730 Leaves cordate angular coarsely toothed nearly opposite on long petioles, Raceme few-flowered, Calyx campanulate oblique plicate, Bracts plano-convex, Flowers tetrandrous, Plant villous

19731 Spiny or nearly unarmed glabrous, Leaves elliptic sinuately toothed spiny wavy, Spike many-flowered, Flowers bracteate showy

19732 Rather hairy, Stem quadrangular, Leaves lanceolate tapering to the base narrow sessile serrately ciliated

[Ivy pilose with subulate segments, Corolla long slender curved, lobes nearly equal, Seeds orbicular ciliated

19733 Glabrous, Leaves ovate bluntly acuminate entire, Spikes downy panicled at base, Flowers solitary sessile, Ca- [Corolla long slender curved, lobes nearly equal wavy

19734 Glabrous, Leaves ovate pointed wavy entire, Flowers twin terminal, Segments of Calyx foliaceous subulate,

19735 Hairy pubescent, Leaves ovate acuminate coarsely serrated on long stalks, Flowers terminal usually solitary on tops of branches bracteate, Calyxes ciliated

19736 Leaves ovate acuminate entire glabrous blotched with white on short petioles, Peduncles solitary axillary and terminal bibracteate usually 2-flowered, Bracts leafy

19737 Leaves stem-clasping elliptic-oblong narrowed to base and auricled hairy, Spikes axillary imbricate leafy

19738 Hispid, Leaves obovate-elliptic dentately crenated lined above Spikes terminal by threes glandular

19739 Hairy, Leaves sessile ovate acuminated crenated, Spikes axillary opposite and terminal, Bracts ovate cuspidate

19740 Leaves lanceolate equal remotely serrulated 7-nerved

19741 Leaves ovate roundish cuspidate unequal coarsely crenated, Spikes axillary opposite solitary globose on short peduncles hairy, Bracts lanceolate entire

19742 Leaves ovate-lanceolate entire downy, Peduncles axillary dichotomous panicled, Bracts linear, Stamens exserted

19743 Glabrous, Leaves oblong-lanceolate, Flowers in loose 1-sided downy panicles, Lips of Corolla nearly equal

19744 Glabrous branched, Leaves ovate coriaceous entire, Peduncles axillary solitary pendulous or terminal by threes, Flowers sessile decussate in loose spikes

19745 Glabrous, Leaves oblong-lanceolate acuminate, Flowers arranged in quadrangular close spikes formed of keeled large bracts

19746 Leaves oblong-ovate entire undulated, Racemes terminal secund deflexed

19747 Flowers pedunculate axillary solitary, Bracts large

19748 Downy erect-branched, Leaves ovate acuminated ciliated, Flowers twin axillary sessile bractless, Segments of Calyx subulate, Tube of Corolla curved, lobes equal crenated, Capsule downy 10—12-seeded

19749 Branches diffuse, Leaves cordate-ovate, Racemes axillary elongated secund strict, Segments of Calyx acuminated

and Miscellaneous Particulars.

3109 *Strobilórachis glàbra* is very nearly related to *Apheländra*, and should be cultivated and treated like it.

3110 *Whitfièldia lateritia* is a beautiful shrub, having the branches terminated by racemes of flowers, of rather a large size. The calyx and corolla, and often the large bracts, are of one uniform brick-red colour. The plant requires plenty of heat and moisture while growing, and cuttings strike root readily.

3111 *Petalidium barlerioides* is a very pretty shrub, with much the habit of *Barlèria*, from which it has been separated. It is of the most easy culture, and a free flowerer. Loam and peat, with a little rotten dung mixed with it, is found to be the best soil for it. Cuttings from young wood strike freely in the same kind of soil.

3112 *Dipteracanthus* should be cultivated and propagated like *Petalidium*.

3113 *Asystàsia* is a genus of very pretty plants, of easy culture. They require a hot moist atmosphere. A compost of peat and loam, with the addition of a little leaf mould, suits them best, and cuttings strike root readily. *A scandens* bears clusters of large cream-coloured flowers, tinged with blush, and is well-fitted for training on trellis-work.

History, Use, Propagation, Culture,

3114. *Hydroméstis maculàtus.* The same culture and propagation as *Aphelándra* Readily increased by cuttings or seeds

3115. *Hexacéntris mysorénsis* Among all the plants exhibited in 1852, none excited such universal interest as this plant. It formed a small umbrella-like creeper, trained over trellis, the whole circumference of which was loaded with pendulous racemes of the most beautiful large yellow and crimson flowers. The culture and propagation of the species are the same as for *Thunbérgia*

3116. *Meyénia Hawtayneàna* is a splendid climber It should be treated like *Thunbérgia*

3117. *Mastacánthus sinensis* is an autumn-flowering plant, and furnishes rich violet blossoms at a late time of the year It grows freely in sandy loam and peat, and requires plenty of room for its roots, and plenty of water when

19760 Leaves obovate or ovate acute glabrous Racemes terminal compact thyrse-formed, Segments of Calyx linear-lanceolate, Tube of Corolla widened and recurved above, lobes of limb crenately curved, Stamens glandular

[ing water

19761 Leaves ovate-lanceolate entire petiolate, Spikes terminal solitary with imbricate cucullate bracts or scales hold-

[ovate acuminate keeled serrated, Upper lip of Corolla lanceolate erect, lower one large

19762 Leaves ovate glabrous tapering into the thick-winged petiole, Spike simple thickened rather tetragonal, Bracts

19763 Lvs cordate angular on naked petioles, Peduncs short 1-flowered, Calyx trunc , Bracts ovate ciliated, Anthers sagittate glandular at base, Glands pedicellate, Style bearded at top, Stigma foliaceous 2-lobed

19764 Leaves cordate entire, Flowers scarlet

19765 Leaves oblong acuminated 3-nerved a little toothed obtuse at base or hastate, Bracts of Calyx small, Laps of Corolla 2-lobed, upper lip galeate, tube shaggy at base inside

19766 Leaves cordate entire coriaceous, Flowers purple

19767 Arborcous downy, Lvs rhomb-cordate sometimes 3-lobed tomentose beneath, Thyrse many-flowered, Corolla downy bilabiate

[above silky beneath, Heads of flowers oblong or globular

19768 Shrubby Branches bluntly tetragonal, Leaves opposite or in threes oblong acuminate sharply serrated scabrous

19769 Rhizoma creeping, Stems erect 4-angled Lvs obl -lanc coarsely toothed Heads of flwrs nearly globose yellow

19770 Spreading suffruticose with rooting branches, Leaves obovate-cuneate sharply serrate, Heads of flowers subovate at length cylindrical

19771 Leaves ovate oblong petiolate obtuse coarsely serrated downy, Peduncles axillary fastigiate

19772 Leaves entire, Inflorescence axillary cymose few-flowered

[Segments acuminate lancer than tube of corolla

19773 Branches downy, Leaves fascicled semiterete obtuse when young viscid, Spikes terminal solitary Calyx viscid,

19774 Stems terete almost simple downy, Leaves scattered linear-oblong glabrous, Flowers umbellately capitate, Calyx trimartite downy

19775 Leaves of many leaflets, upper or floral lvs with narrow much acuminated serrated leaflets, Flowers panicled, Habit of the horsechestnut

19776 Leaves ovate-lanceolate entire wavy petiolate smooth, Racemes axillary 4—5-flowered at tops of branches

[nal Segments of Calyx white 3 nerved Corolla with a slender tube and obovate segments

19777 Downy, Stem tetragonal scandent Leaves cordate-ovate acuminate entire, Corymbs many axillary and termi-

19778 Hairy rusty, Leaves large obovate-oblong sinuately undulated, Peduncles terminal 2-leaved Flowers crowded, Calyx foliaceous ciliated, Corolla with a long pilosely glandular tube jointed beneath apex, Stamens exserted

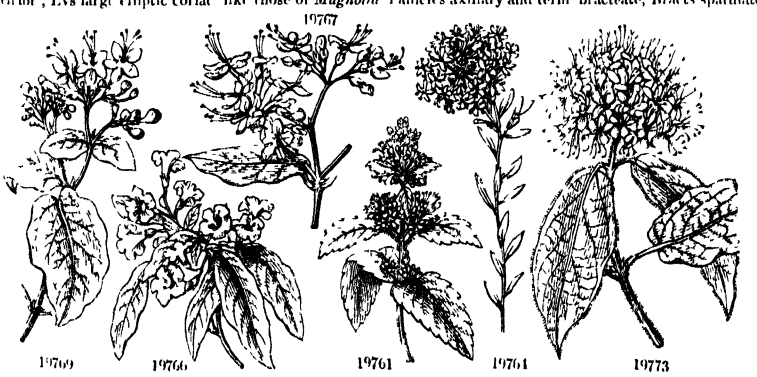
19779 Leaves oblong wavy acuminated rather cordate at base Panicles terminal corymbose, Calyx 5-toothed, Segs of Cor obl nearly equal [Segments of Calyx foliac elliptic inner, Tube of Corolla exceeding calyx a little

19780 Branches tetragonal hairy, Leaves cordate acute dentately serrated woolly petiolate, Panicle terminal bracteate,

19781 Lvs roundish cord acute and acutely toothed, Lobes at base rounded and incumb Pan term bract col

[lute edges shining above, Cymes axil 3-flwd, Calyx obconic campan 5-toothed Tube of Cor long filiform

19782 Downy when young, glabr in adult state, Lvs coriac opp or 3 in a whorl lanc or obl acum with ent revo-



[tute Calyx bibracteate, Segments subulate, Corolla salver-shaped, Tube slender

19783 Downy, Leaves elliptic acuminated sinuated or angular rather cordate at base, Cymes many-flowered capi-

Branchs 4-furrowed, Lvs large cord -acum glabr slightly serr lepidoted beh , Panics large term thyrs bract ,

Bracts narr spat coloured, Cal large 5-angled, Tube of Cor hardly exceeding Calyx, Stams much exserted

19784 Glabr , Lvs large elliptic coriac like those of *Magnolia* Panicles axillary and term bracteate, Bracts spatulate

and Miscellaneous Particulars

Growing Cuttings of young wood strike freely Strong-scented when bruised, with much the appearance of *Nepeta*

19758 *Sclerŏon oleïnum* A small bush with habit of the olive and flower of *Verbèna.* The genus is said to come

19759 *Ægiphila* It is of easy culture and propagation

19765 *Vitex Domàna* The wood of this tree is the African Oak or African Teak, so much used for many pur-

poses It may be cultivated in the same manner as any other hothouse tree.

19769 *Cassèlia* is a pretty stove shrub when in blossom. It requires the treatment of ordinary stove plants

19774 *Clerodèndron Bithuncànum* and *splèndens* are two most showy species The whole panicle of the first is of a crimson The lobes of the corolla are oblong and reflexed, the upper lobe has a white base

History, Use, Propagation, Culture,

3120. *Pterodiscus speciosus* is a splendid plant belonging to the *Pedalineæ* The root is tuberous, large, and solitary quite globose, the upper part elevated above the earth, and produces from its summit a stem which soon divides into several erect succulent branches bearing opposite leaves and large handsome reddish purple flowers

2679. *Torenia* All the species here mentioned are very similar in habit, and are very pretty plants now very generally cultivated in our hothouses and orchideous houses. They are trailing plants, grow in baskets like *Æschynánthus*, and may be trained in any way They grow readily in any loose soil, and are readily increased by cuttings or division. Moist atmosphere is necessary. *T asiática* is a most elegant plant, and is spread all over India The flowers are splendid, of a bluish purple velvety colour, with three darker purple blotches on a pale ground

19797. *Browállia Jamesòni* is a showy shrubby plant four to six feet high, bearing corymbose cymes of yellow flowers It thrives best in a warm part of a greenhouse Light loam, sand, and peat, has been found to suit it well In summer it will do in the open air, planted against a wall, or in a sheltered situation. Cuttings strike freely

19776 Leaves opposite oblong sinuately toothed, Petioles short with one gland on each side, Flowers axillary solitary

19777 Leaves lanceolate acute serrated smooth, as are the branches

19778 Leaves obovate serrated, Flowers numerous white spotted with violet

19779 Leaves ovate-lanceolate serrated entire behind shining and clammy as are the branches, Flowers axillary

19780 Sepals 1—3-nerved entire or toothed in front below gradually narrowed into 1—2 subulate points, Corolla tubularly bell shaped slightly curved at base, Lips denticulate, upper lip not notched, Stamens hairy

19781 Slender-branched glabrous, Leaves alternate subulate, Flowers racemose, Spur arched very long, Peduncles and Calyx pilose, Upper Lobes of Corolla obtuse, lower ones emarginate, Calyx reflexed

19782 Clammy and villous from glandul hairs weak, Lvs opp ovate roundish, lower ones petiolate toothed obt, upper one sessile ent, Flws nearly sess, Cor small, upper lip dark purple, lower one and palate yel, Spur incurved white

19783 Ascending, Leaves linear channelled rather fleshy glaucous, Flowers loosely racemose brownish yellow, Sepals linear obtuse, Spur shorter than corolla, Palate adpressed downy

19784 Villous, Radical Leaves subspatulate deeply toothed, rameal leaves deeply tripartite having the middle lobe large and more or less denticulate

β Flowers with numerous large distinct spots of white

19785 Tall, nearly simple pilose, Leaves pinnatifid, Segments serrate-crenate or sub-bipinnatifid, Spike dense, Calyx [hairy, Beak linear twisted twice as long as helmet [der lip which is hooded and 3-lobed, Segments emarginate

19786 Leaves pinnatifid, Segments doubly toothed, Spikes long, Beak of Corolla narrow spirally twisted below the un-

19787 Tall branched hairy, Leaves bipinnatifid, segments deeply toothed, Spikes slender interrupted, Teeth of Calyx crested, Helmet narrow-oblong exceeding the lip

19788 Racemes pendulous dense many-flowered, Leaves oblong-lanceolate a little toothed, Flowers nearly sessile, Calyx narrow plicate, teeth unequal, Tube of Corolla slender

19789 Clammy erect downy, Leaves oblong or lanceolate glabrous above toothed or entire, Peduncles shorter than leaves, Calyx elongated plicate with lanceolate lobes

19790 Diffuse glab or a little hairy, Lvs ovate or ovate-lanceolate acuminate serrately crenated, Calyx with 5 nearly equal ribs or 3 narrow winged ones, Teeth of front Filaments subulate [gregate, Filaments all toothless

19791 Downy, Leaves broad-ovate subcordate coarsely serrated, Peduncles axillary solitary or terminal and rather ag-

19792 Diffuse downy, Leaves ovate roundish and cordate serrated, Calyx elongated with 5 equal acutely keeled ribs, Teeth of front Filaments short obtuse

19793 Leaves lanceolate-acuminate jagged glabrous, Racemes subsecund, Corolla downy, Segments ovate bearded, Bracts all shorter than pedicels

19794 Leaves ovate lanceolate acute subcordate at base glabrous, Stem and Petioles winged, Cymes lax few-flowered 4—8, Sepals roundish with membranous edges, Staminodium bifid with diverging lobes

19795 Lvs ovate acute tapering to base, Pedunc 1-flwd axil racemose at tops of brnchs, Brnchs and adult calyxes glab

19796 Lvs opposite or altern ovate acum, Pedun axil sol 1-flwd, Calycine segs subulate, Segs of Cor ovate acum

19797 Shrubby downy, Leaves ovate rugose, Flowers subcorymbosely cymose, Pedicels short, Calyx ovate tubular oblique, Corolla with an incurved wide tube and shorter segments

19798 Hispid, Leaves equal ovate oblique at base sparingly serrated, Limb of Corolla wide [Spur conical

19799 Pilose, Lvs ovate acum hispid above serrate, Cal downy, Tube of Cor shorter than limb, which is spreading

and Miscellaneous Particulars.

312] *Achimenes* The species are increased by the scaly caterpillar-like tubers, which are produced in quantities A compost of loam, peat, and sand, in equal proportions, is found to suit them best In the autumn, when the plants have done flowering, and the stems become dead, the tubers may be kept in the soil till spring, giving no water, in the same way as recommended for bulbs. But in spring, when they begin to grow, they should be repotted in fresh mould When growing they require plenty of water Four to six tubers in a pot will be sufficient. The plants are very elegant, and have become great favourites They are best grown in a close frame or pit, and when they are in flower may be removed and placed where they will be seen to the best advantage in a stove, or conservatory or greenhouse. Heat and moisture seem to be requisite to their growth By planting in January, February, and March, plants may be had in blossom most of the year

Trevirāna pulchĕlla, No 8893, in the body of the work, is the original species of *Achimenes*, and is as beautiful a plant as any of the more recently introduced species.

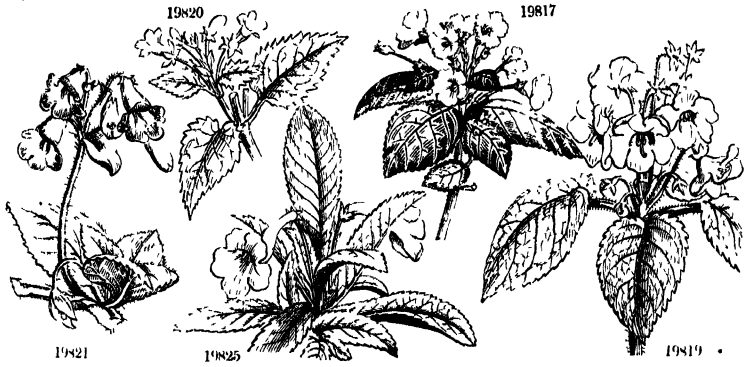
History, Use, Propagation, Culture,



3122 *Niphæ'a* The species form bulbs or tubers like *Achimènes*, by which they are propagated Their culture and treatment should be the same as recommended for the species of that genus, to which it is very nearly related

3123 *Diastema ochroleùca* is a pretty plant nearly related to *Achimenes*, and is propagated by the tubers in the same way Its cultivation is in every respect the same as that recommended for the species of that genus

3124 *Chirita sinénsis* has the habit of a stemless *Gloxinia* or *Streptocàrpus* The plant succeeds best in a moist stove, shaded while the sun is hot By having plants in different temperatures flowers may be kept up for many months All the species are cultivated in the same way as *Gloxinia* *Chirita Moónii* is a splendid suffruticose plant with large bluish-purple flowers like those of *Gloxinia* They strike readily from cuttings, and are of the most easy culture.

3125 *Didymocàrpus cimita* is a pretty plant, bearing white flowers with a yellow lip. A mixture of light loam

19800 Leaves unequal oblique at base serrated pilose, Peduncles axillary pilose 3-flowered, Tube of Corolla gibbous at base, Limb oblique, the front segment largest
19801 Lvs sometimes 3 in a whorl pil., Pedun filif rnny-flwd pil , Limb of Cor. equal to tube [Limb small spreading
19802 Lvs pilose oblong subcor serrated unequal, Peduncl 1-flwd, Tube of Cor. 1½ in. long cylin. saccate at base pilose,
19803 Hairy, Leaves on longish petioles ovate acuminate serrated wrinkled coloured beneath, Peduncles 1-flowered, Flowers nutant Lobes nearly equal spotted, Epigynous glands 5 united
19804 Hairy, Stems bulbiferous, Lvs cordate serrated, Peduncs 1-flwd, Limb of Cor. flat with rounded serrulate segs
19805 Creeping stoloniferous downy, Lvs elliptic serrated wrinkled coloured, Peduncles 1-flwd, Calyx spotted inside with a fringed mouth, Segments of Corolla ciliately toothed, Ovaria uniglandular
19806 Stem purple rather hairy, Lvs oblong-lanceolate wrinkled serrate nettle-like, Peduncles hairy, Calyx smooth Tube of Cor. deflexed gibbous at base, Limb nearly equal, Epigynous disk 5-lobed [low in the throat
19807 Pil , Lvs ovate acum. serrated, Peduncs 1-flwd, Calyx downy, Cor lilac dark near the mouth and a dash of yel-
19808 Clothed with viscid hairs, Leaves ovate or oblong crenated, Cymes pedunculate axillary, Corolla gibbous above the base, Segments of Limb roundish nearly equal, Ovaria hairy
19809 Downy, Lvs oblong coarsely serrated, Peduncs solitary axil , Cor campanulate dingy white speckled with purple and 3-crested inside, lobes erect roundish, Segments of Calyx lanceolate, Filaments spiral
19810 Hairy, Leaves 3—4 in a whorl ovate or oblong coarsely serrated, Pedicels 1-flowered, Segments of Calyx lanceolate erect, Corolla with a long tube and an ample spreading limb
19811 Hairy, Lvs opposite or 3 in a whorl ovate deeply and doubly serrated, Peduncs axillary 3—5 flowered, Segments of Calyx linear, Corolla funnel-shaped, tube curved, lobes roundish lower lobe fringed
2 Lobes of Corolla all coarsely fringed
19812 Stem simple downy, Leaves rather unequal obliquely cordate ovate serrated, Peduncles in the axils of upper leaves Corolla nutant gibbous at base
19813 Hairy, Leaves opposite or 3 in a whorl cordate-ovate coarsely serrated velvety and elegantly painted, Peduncles solitary or twin axillary 1-flwd, Tube of Calyx turbinate, Lobes of Corolla roundish, 3 lower ones smallest
19814 Hairy, Stem panicled bulbif , Lvs cord ser , Pedun sol axil , Limb of Cor flat with rounded serrulated lobes
19815 Downy pilose Stem short, Leaves elliptic crenated spotted with white, Racemes nearly terminal elongated many-flowered covered with glandular hairs, Upper Lip of Corolla short 2-lobed, lower lip concave fringed
19816 Stems slender flexuous, Leaves serrated from middle to top, Flowers large axillary, Tube of Corolla 2 inches long, Limb broad spreading, Lobes finely serrated dotted with purple inside
19817 Hairy, Lvs oblong-cordate toothed, Flws axillary and terminal aggregate, Calyx hispid with roundish segments
19818 Hairy simple, Leaves oblong-cordate toothed rugose, Flowers axillary and terminal drooping
19819 Leaves ovate oblong rather cordate at base bluntly toothed Stem and Petioles red, Flowers aggregated axillary, Peduncles 3–4 inches long, Segments of Corolla irregular concave
19820 Hairy Leaves on longish petioles ovate acute coarsely serrated wrinkled, Panicles terminal trichotomous subfoliaceous, Corolla glabrous, Glands clavate longer than ovarium [Ovarium covered with glandular hairs
19821 Stemless, Leaves opposite elliptic-ovate crenated, Petioles trigonal, Corymbs many flowered bibracteate at base,
19822 Suffruticose, Branches villous, Lvs 3 in a whorl ovate-lanceolate acuminated downy minutely and glandularly toothed, Peduncles axillary solitary 3—4-flowered, Calyx tomentose, Corolla downy
19823 Lvs opp on long petioles brownish silky from adpr hairs ser oblique at base, Peduncs axil trichotomous, Bracts and Lobes of Calyx, Cor bilamellate inside, and with 2 hairy elevated lines bet , Stig transversely triang
19824 Suffruticose villous, Brnchs bluntly tetrag , Lvs on short petioles 3—4-in a whorl ovate-lanceolate acutish obsoletely and glandularly serrated, Peduncles axillary solitary or twin, Sepals narrow keeled, Corolla large downy
19825 Suffruticose erect simple pilose, Stem short very villous, Leaves sessile cuneate-lanceolate velvety purplish red beneath, Pedicels 3—5 axillary, Segments of Calyx broad subulate
19826 Stem fleshy marked by a dense villous line, Leaves repandly toothed half-cordate that is with an unequal base, Racemes secund, Calyx 5-angled, upper angle crested near the base
[ments ovate, Lobes of Corolla roundish and nearly equal, Style exserted
19827 Leaves oblong-lanceolate acuminated serrated obscurely nerved, Umbels many-flowered, Calyx 5-parted, seg-
[lose, Segments linear, Corolla clavate, segments obtuse with a dark mark at top equal, Anthers purple
19828 Lvs lanceolate acuminate slightly denticulated, Umbels nearly sessile terminal many-flwd, Calyx 5-parted pu-
19829 Much-branched radicant, Leaves oblong acuminate, Umbels term many-flwd, Corolla sub-clav. clothed with glandular hairs

and Miscellaneous Particulars

It should, or turfy peat, is said to be the best soil for it, and care should be taken not to over-water it in winter It is cultivated like *Orchideæ*, in a warm moist atmosphere, during the season of its growth, and strikes root readily from cuttings

19826 *Klugea Notoniana* is a soft-stemmed decumbent plant, flowering freely in a warm stove A mixture of loam and peat is found to be the best soil for it, and it appears to like moisture. The flowers are blue, disposed in one-sided racemes

19827 *Trichynánthus grandiflorus* succeeds well if planted in pots, although in its native country it is an epiphyte In fact all the species should be cultivated the same as tropical epiphytal *Orchideæ*, in baskets or on blocks of wood. Heat and a moist atmosphere are necessary. All the species are splendid plants when in blossom, and worth cultivating in every hothouse or orchidaceous house.

History, Use, Propagation, Culture,

3128. *Agalmyla staminea* is a splendid plant when in blossom, and is nearly related to *Æschynánthus*. The flowers are of a bright scarlet colour. The stems are creeping and throw out roots at the joints. It requires the same treatment as the species of *Æschynánthus*, and should be potted in turfy peat mixed with a portion of loam and sand. Good drainage is necessary for this purpose the pots should be half-filled with potsherds, and a few stones should be mixed among the soil.

19848. *Collinsia multicolor* is a very pretty tall annual plant. It comes near to *C. bicolor*. The floral leaves are purple. The middle lobe of lower lip is crimson, but the rest of the lower lip is lilac, and so is the upper lip, except that there is a broad white spot in its middle relieved by numerous blood-coloured dots. The plant has a good effect when grown in large patches or beds.

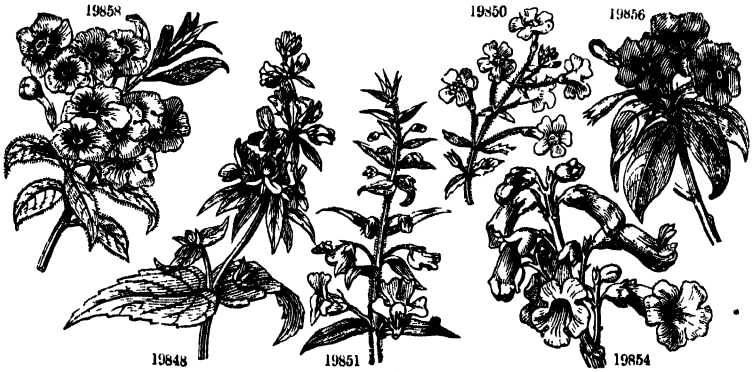
3129. *Chænóstoma* consists of a great number of known species, and is separated from the old genus *Manulea*. They require the treatment of *Verbena*, and are like them well-suited for bedding out in the same way. In order to

19830 Lvs oblong-lanceolate acuminate convex dotted beneath Bracts membranous oblong concave, Sepals 5 oblong [obtuse, Limb of Corolla flat, upper lip emarginate, lateral ones truncate
19831 Lvs oblong-lanceolate acuminate serrately-toothed, Flowers fascicled axillary, Bracts minute subulate, Calyx 5-parted, segments subulate, Cor. fringed, Stamens exserted [late black from tomentum, Corolla downy
19832 Subscandent, Leaves elliptic entire or slightly serrated glaucous, Corymbs term bract, Calyx large campanu-
19833 Scand, Lvs ov obscurely tthd, Corymbs term bract Calyx ov cylind glab, Corol 3 times longer than cal
19834 Upper Lvs always verticil ovate-lanceolate acum slightly ser, Flws term numerous downy, Segs of Calyx subul, Stams exserted, Corolla with long clavate curved tube and obliquely 4-lobed limb, upper lobe bifid
19835 Pendulous, Leaves broad-lanc acuminate entire, Flowers erect fascicled, Calyx 5-parted, segs subul, Corolla with long clav curved tube and oblique contracted bilobed mouth, upper lobe bifid, Stamens exserted
19836 Leaves oval-acute entire, Peduncles axillary 3-flwd, Calyx cup-shpd obsoletely-lobed, Corolla tomentose, Upper lip bilobed, lower one tripartite, Lobes obtuse [tub with wide throat 4-cleft, upper seg. 2-lobed
19837 Lvs ovate obtuse entire, Flowers axillary clustered Calyx tubular smooth purplish-brown, lobes blunt Cor
19838 Glab, Lvs ovate-lanc sub-acum, Calyx 5-parted, segs linear-lanceolate, Seeds ending in one hair at each end
19839 Leaves elliptic acuminated glabrous sinuately toothed, Flowers axillary solitary or twin, Peduncles pentagonal, Calyx glab 5-cleft, segs subul, Cor glabrous, limb ciliated, Style enclosed Stamens exserted
19840 Leaves oblong-lanceolate or obovate-lanceolate acuminate hardly toothed, slightly veined, Flowers axillary downy, Calyx 5-cleft, segs subul, Corolla glab, limb cil blotched with chocolate, Stamens exserted villous
19841 Erect, Leaves elliptic-lanceolate acuminated entire rather undulated, Flowers in terminal fascicles, Segments of Calyx lanceolate ciliated, Corolla clavate 3 inches long Stamens exserted
19842 Scandent, Lvs small ovate slightly toothed with sunk veins Corymbs terminal bracteate, Calyx downy cylindri-
19843 Leaves said to be striped like the zebra [cal, segs ovate, Corolla downy tubular, Stamens exserted

19844 Stem radicant hairy, Petioles hairy, Lvs alternate oblong acuminate denticulated downy beneath and on edges, Flowers diandrous in axillary fascicles

19845 Clothed with silky villi, Stems simple, Leaves oblong-lanceolate entire or a little serrated, Lobes of Calyx deltoid-lanceolate spreading entire or serrated, Corolla villous spotted
19846 Stem suffruticose fleshy radicant clothed with small scales, Lvs lin-lanc acuminate almost entire glab above but covered with rufescent hairs beneath, Flowers solitary axillary, Calyx glabrous, Corolla long hairy
19847 Climbing, Flws large orange-coloured, Calyx pale yellow, Peduncles clothed with purple hairs It will grow best on rotten wood

19848 Downy, Floral Leaves smooth beneath, the lowest cordate stem-clasping ovate-lanceolate bluntly serrated, the middle ones linear blunt entire, the uppermost ones abortive, Pedicels hardly glandular, Sepals 3-ribbed



19849 Branches hairy at top, Leaves oblong-lanceolate or linear entire, Flowers racemose, Calyx segments linear exceeding the capsule but 3 times shorter than tube of corolla
19850 Much branched, Branches downy panicled, Leaves ovate toothed, upper ones oblong glabrous or canescent beneath, Racemes loose, Calyx hispid

19851 Rather hairy, Leaves lanceolate ciliated entire, upper ones smaller bract-formed, Peduncles solitary slender, Middle segment of lower lip of Corolla furnished with a long horn which is bidentate at top
19852 Cvd with gland down, Lvs lanc acum serrated, floral ones broader at base bract-formed exceeding the pedicels
19853 Suffruticose glabrous, Leaves narrow distantly toothed, Racemes terminal erect many-flowered

19854 Leaves ovate cordate at base acute undivided or 3-lobed hairy beneath, Panicle terminal covered with rusty tomentum

19855 Erect or ascending villous, Leaves ovate, upper floral leaves shorter than calyxes, Flowers axillary solitary, Corolla 3 times the length of calyx

19856 Leaves obovate-oblong or elliptic hardly acuminate glabrous or hairy beneath on the midrib, Cymes 2—4-flwd, Calyx large tubular inflated glabrous, Tube of Corolla scarcely exceeding the calyx
19857 Lvs broad-elliptic acutish, Bracts lanceolate acuminate glab as are the calyxes, Flws few subracemose terminal
19858 Lvs obl acuminate glab ciliated, Bracts lanc acuminate glab, Calyx glab, Flws few subracemose terminal
19859 Lvs oblong-lanceolate not shining, Flowers terminal about 2 together, Limb of Corolla 2½ inches across

and Miscellaneous Particulars.

have a sufficient number of plants for that purpose cuttings should be struck in autumn, kept in any part of a frame or greenhouse during winter, and turned out in the summer

19830 *Paulownia imperialis* is very similar in habit to *Catalpa syringæfolia*, but is not so hardy, for the young shoots are generally killed by the frost in winter, and consequently it does not often flower in the open ground in this country It has, however, flowered at Paris frequently The flower has the different shades from blue to purplish lilac It may be propagated by pieces of the root It is altogether a splendid tree both in flowers and foliage

3130 *Tradenbérgia urticifolia* is a plant of easy culture, and it readily produces seeds, by which it is propagated

19856 *Franciscea calycina* is a fine shrub when in flower. The flowers are at first blue, but decay to white. Loam and peat, and a portion of sand, is found to be the best soil for it The production of fine heads of flowers depends upon its vigorous growth, therefore the plants must be placed in bottom heat, and shifted from size to size of pots as they become filled with roots. The other species require the same treatment.

Page 560. CLASS XVI.—MONADELPHIA.

Order I TRIANDRIA. Stamens 3

3134 1452*a* *Rigidélla* Sepals with boat-formed imbricating claws and reflexed lamina Petals very small straight, with short linear laminæ Anthers sessile on the column, with lateral cells Stigmas 3 bipartite, appendages late at back Flowers pendulous. Capsule papyraceous, many-seeded, 3-valved at top. Seeds dotted, subglobose

History, Use, Propagation, Culture,

3132. *Ionopsidium acaúle* is a pretty little annual, will grow in any rich damp soil, or on the shady side of rock-work. It makes a neat edging to borders in shady places. The flowers are at first white, but turning to lilac. It may be propagated either by seeds or by runners, which it throws out in damp soil.

3134. *Græ'llsia saxifragifólia* has much of the habit of *Saxifraga granulàta*, and the flowers are much like those of *Arabis alpina*. It does well with the treatment of ordinary alpine plants. It is a pretty little alpine plant smelling

19860 Leaves large obovate-oblong. Bracts deciduous lanceolate pilose ciliated, Racemes compound terminal large
β Calyx broader and as well as bracts smooth [hemispherical

[long tube and flattish limb, Valves of Capsule cortaceous
19861 Glabrous, Leaves obovate-oblong acute, Flowers solitary, Calyx campanulate deeply 5-cleft, Corolla with a
β Flowers larger than in the species

19862 Leaves opposite linear-lanceolate sharply-toothed tapering to both ends, Racemes terminal

[of Corolla exceeding the tube Capsule oblong longer than calyx
19863 Tall Branches twiggy, Leaves obovate spinosely toothed Racemes elongated terminal sub compound, Segments
19864 Leaves oblong obtuse tomentose as are the branches, Segments of Corolla longer than the tube, Corolla white streaked with bluish purple

---

3133 1407*b* *Græ'llea* Calyx equal at base Petals on short claws with entire limbs Stamens toothless Silicle elliptic flat, 1-celled from the septum being absent, apiculated by the Stigma. Funicles free, a little thickened at base Cotyledons flat Radicle accumbent

---

19865 Lower Leaves like *Cynoglóssum*, upper ones narrower wavy, Flowers large in close racemes, Corolla bright violet

19866 Cauline Leaves oblong half stem-clasping subcordate sinuately toothed scabrous from branched down, Racemes terminal, Pedicels longer than Calyx, Siliques linear elongated erect

19867 Suffruticose at base panicled, Leaves lanceolate repandly toothed wavy downy, Pods nearly orbicular 4-seeded Seeds margined

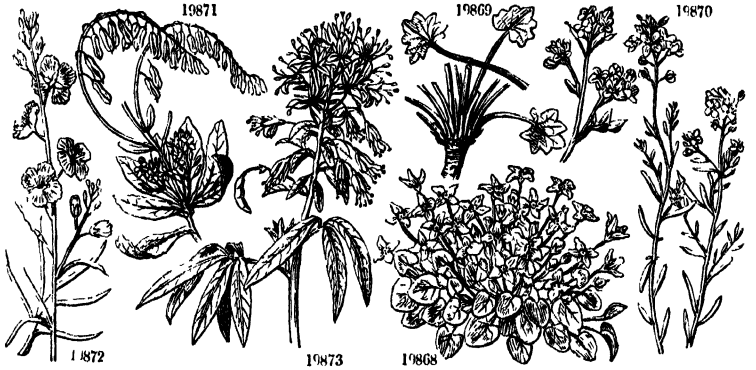
19868 Leaves ovate-roundish entire on long petioles, Pedicels radical, Pods roundish emarginate

19869 Glabrous, Stems many, Radical Lvs stalked reniform palmately and deeply toothed, cauline ones ovate 3 lobed, uppermost ones linear, Racemes corymbosely umbellate

19870 Pods 2-celled 2-seeded obcordate crowded, Valves winged on the back entire, Leaves linear distant adpressed

19871 Suffruticose, Radical Leaves glaucous oval-lanceolate slightly-toothed, cauline ones linear, Silicles linear glabrous crowned by the sessile stigma a little constricted in middle and narrowed at base

19872 Glabrous green, Siliques monthferous spreading and pendulous, Lower Leaves trifid rarely pinnately 5-cleft with filiform lobes, upper leaves entire, Lateral Stamens furnished each with a tooth



19873 Leaves 3—4-foliate, Leaflets oblong-lanceolate acute at both ends entire, Sepals connate at base, Petals oblong-elliptic nearly sessile, Stamens equal, Fruit linear longer than stipe

---

3134 1159*b* *Hydrotæ'nia* Perianth campanulate, nearly equal Petals unguiculate marked by a triangular zone above the claw Anthers sessile Ovarium free, conical, many-seeded Style filiform, trifid at apex Segments tripartite linear, convolute

3135 1159*c* *Beatónia* This genus differs from *Tigridia* in the anthers being broad at base, becoming gradually smaller to the top, decurved, and in the forked lobes of the style having a minute crest placed within the fork and terminated by a minute stigma

3136 1159*d* *Phalocállis* Perianth crateriform Larger Sepals spreading Petals revolute Filaments connate

and Miscellaneous Particulars.

trongly of garlic The plant is well fitted for ornamenting rockwork.

19871 *Isatis indigótica* is called *Tien-ching* by the Chinese; and is considered by them as a plant of great importance, according to Fortune, it covers a large tract of country It is grown in rows, and in June the plants are from 6 inches to 1 foot in height, and are then considered in perfection for the manufacture of Chinese indigo or woad

at base, reflexed at top. Cells of anthers agglutinate above the style, which is trigonal and 3-lobed at top. Stigmas short, transverse, 2-lobed, obtuse, emarginate. Crests of lobes 2, petaloid, reflexed. Capsule triquetrous, oblong membranous. Operculum obsolete, indehiscent. Seeds flattish, angular, marginate.

Order 2. PENTANDRIA. Stamens 5.

3138. 1459*a* *Disémma* Calyx 10-lobed · Tube short, sulcate below Crown of throat double · outer one of distinct threads ; inner one combined into an entire or toothed membrane The rest as in *Passiflòra*.

3139 1459*b* *Tacsònia*. Tube of calyx long Limb 10-lobed. Throat furnished with a scaly membrane. The rest as in *Passiflòra*.

Order 3 HEXANDRIA. Stamens 6

3140 1460*a*. *Gelasine* Perianth regular, annulated at base Stamens 6, monadelphous, but partible Anthers forming a cylinder Style filiform. Stigma 3-lobed. Capsule obovate, 3-valved, opening at the sutures at top. Seed angular, truncate at top

Order 4. OCTANDRIA. Stamens 8.

3141. 1462*a* *Luvánga*. Calyx truncate, obscurely 4-lobed Petals 4, oblong, fleshy. Stamens 8, united into a tube Anthers linear Style cylindrical. Stigma subglobose, entire. Berry oblong, somewhat 3-lobed, 3-celled pulpy. Pulp resinous, odoriferous. Seeds solitary. Albumen none.

Order 5 DECANDRIA. Stamens 10.

3142. 1464*a* *Wallsùra* Calyx 5-toothed Corolla of 5 petals Nectary double outer one cylindrical bearing anthers in its mouth, inner one a fleshy ring round the ovarium. Ovarium 2-celled Cells 2-seeded Berry 1-seeded

3143 1464*b* *Chirostèmon* Calyx 5-parted, tribracteate Sepals deciduous, coloured inside, foveolate at the base 5 inches long in the bud. Petals wanting. Filaments connate into a tube which is cleft at top, with the lobes bent to one side, exserted, and bearing on the back of each lobe 2 anthers Stigma acute Capsule 5-angled, 5-celled 5-valved, with a villous dissepiment in the middle of each valve Seeds egg-shaped, carunculate, 15 or 18 in each cell

3144. 1464*c*. *Napoleòna* Calyx coriaceous, 5-cleft Corolla of 3 monopetalous verticils outer one large, multiplicate, many-toothed, middle one like the corona in *Passiflòra*, that is, cleft into filiform segments to the base, inner

History, Use, Propagation, Culture,

3134 *Rigidélla* are pretty bulbs with scarlet flowers, requiring the treatment of *Tigridia*.

3135 *Hydrotæ'nia* The genus are very pretty plants when in blossom. They are greenhouse bulbs of easy culture They should have no water after the leaves begin to fade, until they begin to grow again in spring, when they should have plenty. A dry shelf in a greenhouse is a good place to keep them during winter. Equal parts of

one erect cup-shaped, having its margin inflexed and multifid Stamens 10, in a single series, monadelphous. Filaments membranous, inflexed Anthers adnate, 2-celled Disk annular, somewhat cup-shaped Ovarium adherent, fleshy, 5-celled, 20-ovulate. Style pentagonal, the angles winged Stigma disk-formed, 5-rayed.

Order 6. DODECANDRIA. Stamens 12.

3145 1467*a* *Astîrta* Involucel 3-leaved, deciduous Calyx 5-cleft Petals 5, twisted. Stamens 20, unequal, combined into an urceolus without any sterile stamens Ovarium 5-celled. Styles 5, spatulate. Ovula 2 in each cell ascending

3146 1470*b*. *Asterotrichion* Calyx campanulate, 5-cleft, with 5 nectariferous pits in the bottom. Petals 5, unguiculate joined together a little at base Stamens 10—15, fertile, outer ones shortest Anthers reniform, 1-celled, opening by a transverse chink Ovarium 2-celled. Cells 1-ovulate. Ovula pendulous Styles 2, clavate, enclosed. Stigmas thickened truncate. Perhaps dioecious.

Order 7 POLYANDRIA. Stamens indefinite in number

3147 1471*a* *Callîandra* Calyx campanulate, bidentate rarely 5-cleft Corolla funnel-shaped Stamens indefinite, much longer than corolla, joined into a tube at base Legumen linear, compressed, pulpless

3148 1479*a* *Lopîmia* Involucel longer than calyx Calyx of 20 bristle-like connivent leaflets Corolla flat Column of stamens deflexed. Stigmas 10 Anthers 30—40. Capsule of 5 carpels Carpels indehiscent, covered with mucilaginous glue

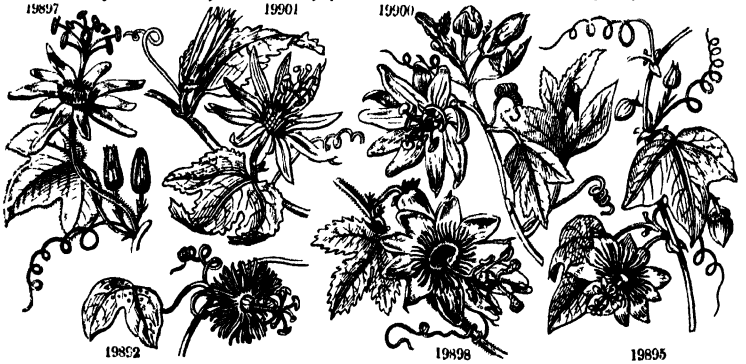
3149 1482*a* *Fugônia*. Calyx 5 cleft, girded by a 6—12-leaved involucel. The leaflets bristle-formed very short, Anthers numerous, from the sides and lower part of the staminiferous column Stigmas 3—4 agglutinate or free, clavate Capsule 3—4-celled, 3—4-valved, 3—4 seeded Seeds naked or covered with short wool

3150 1490*a* *Goethia* Calyx campanulate, 5-cleft, surrounded by a large bladdery involucel Petals 5, somewhat joined together at the base, twisted in the bud Stamens numerous Style elongated, cleft at apex into 8—10 stigmas Carpels 5 coriaceous, 1-seeded

3151 1490*b*. *Trochetia* Calyx 5-parted, spreading, naked Petals 5 Stamens 20—25, of which 5—7 are sterile Ovarium solitary, roundish, scaly. Style filiform. Stigma 5-lobed Capsule 5 celled, 5-valved. Seeds small, roundish wingless

3152 1495*a* *Polýspora* Calyx girded by accessory bracts Sepals and Petals 5 Stamens numerous Style crowned by a 4—5-lobed stigma Capsule conical, 5-celled, 5-valved, many-seeded. Seeds imbricate, ending in a wing

---



TRIANDRI 1.

19874 Leaves linear green glabrous as are the scapes young leaves finely ciliated, Scape length of leaves, Spathe many-flowered, Inner Keel tomentose, Anthers triangular

19875 Sepals obtuse flame-coloured marked at base with deep purple stripes [the slender stigmas, Pollen yellow
19876 Seps acute 1¼ inch long scarlet with paler claws Pets yel cordate acum, Anthers acute broad at base equaling
19877 Leaves lanceolate, Bracts joined sheath-like, Flowers terminal fascicled nodding, Sepals scarlet with a black spot at the base of each

19878 Flowers marked like those of *Fritillària meleágris*
19879 Flowers yellow speckled with purple, Claws of Petals faced with hyaline globules

19880 Stem forked, Leaves ensiform, Spathe margined with white, Flowers small campanulately rotate [brown lamina
19881 Stem 2 feet, Leaves plicate 1 to 1½ foot, Spathe 2-valved 2½ inches, Sepals with pale green spotted claws and dark
19882 Stem slender, Lvs plicate 8 inches, Spathe 1-valved Peduncs curved, Perianth yellowish, spotted with purple [claws, Petals small recurved, Lobes of Stigma fringed at top with a crested membrane between
19883 Leaves broad plicate 6 inches, Stem 4 inches, Spathe 2-flowered, Ovarium obovate, Sepals spotted with white on

and Miscellaneous Particulars

oam leaf-mould, and sand will suit them best. Perhaps they may succeed in the open air with the same treatment as *Tigridia*

3136 *Bealdnia* Plants with much the appearance of species of *Tigridia*, and the bulbs require the same management and treatment

History, Use, Propagation, Culture,

3137 *Phalocállis plúmbea* has much the habit of *Márica Northiàna*, and the colouring of the flowers is almost the same. The plant will grow in rich light soil. It requires a good deal of moisture when growing; in fact, it may be cultivated exactly like *Márica*.

3138 *Disémma*. The species of this genus require the same treatment as those of *Passiflóra*.

3139. *Tacsónia*. The species are truly handsome climbing plants, deserving a place in every greenhouse and conservatory. They are readily increased by cuttings, require the same treatment as *Passiflóra*, and might prove hardy in warm sheltered situations. Loam, peat, with decayed leaves, and a little sharp sand, is said to suit them best.

19884 Habit of *Márica*, Leaves glaucous plicate, Stem 2—4 feet, Flowers solitary terminal spotted, Spathe 3 inches

PENTANDRIA.

[lary, Involucrum 3-leaved, leaves ovate cordate entire, Sepals and petals oblong equalling the corona
19885 Leaves entire ovate obtuse emarginate glaucous beneath, Petioles with many glands, Peduncles solitary axil-
19886 Leaves membranous ovate acute entire, Stipules entire, Petioles glandular, Peduncles solitary 1-flowered

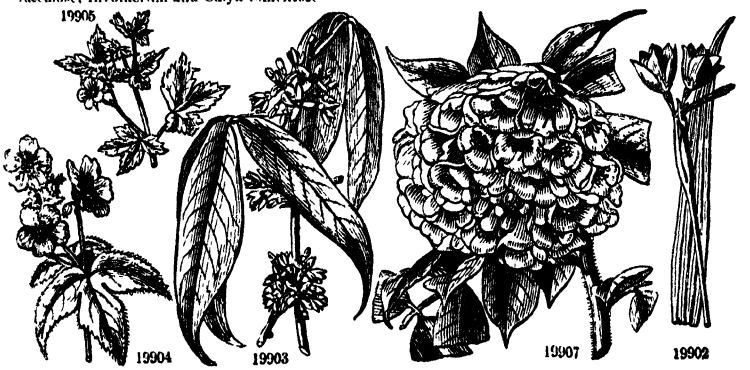
19892 Leaves bifid bat-winged, Stems slender, Flowers starry orange the first day and lilac the second
19893 Lvs 3-lobed serrated, Petioles biglandular at top longer than peduncles Bracts serrated, Sepals beset with gland-like warts on the margins, Corona shorter than petals [lar in middle, Pedicels twin 2— 3-bracteate
19894 Leaves membranous hispid 3-lobed ciliated cordate at base a little toothed apiculated, Petioles hispid biglandu-
19895 Slender hairy, Leaves 3-lobed, Flowers sweet-scented white, the corona variegated with red

19896 Lvs glabrous 3-lobed, Lobes obtuse, lateral ones furnished with an appendage, Bracts bristle-formed glandular at apex remote from the flower, Petioles biglandular
19897 Leaves downy cordate at base broadly 3-lobed, Lobes ovate acute, Petioles biglandular, Pedicels twin 1-flwd, Bracts bristle-formed

19898 Leaves white from down beneath trifid beyond the middle, Lobes serrated, Stipules pinnate, Petioles with 4—8 glands [ovate acuminate, Peduncles 1-flowered, Flowers glabrous
19899 Leaves tripartite cordate at base, Segments ovate-lanceolate serrated, Petioles with many glands, Stipules semi-
19900 Leaves downy beneath 3-lobd, Lobes serrated, Petioles with several glands, Bracts united at base downy, Stipules roundish toothed in a crested manner
19901 Leaves tomentose beneath reticulately veined deeply 3-lobed, Lobes acute serrated, Petioles glandless, Bracts glandularly toothed

HEXANDRIA.



[peduncles, Petals dotted with white and black at base
19902 Leaves plicate 1½ to 2 feet long, Peduncles clasped closely by 3—4 bracts, Spathe many-flowered shorter than

OCTANDRIA.

19903 Spiny tall subscandent, Leaves trifoliate, Leaflets lanceolate acuminate, Flowers axillary fascicled

DECANDRIA.

[distinct, Peduncles terminal 2-flowered, Petals emarginate, Stamens free
19904 Erect pilose, Stem terete, Leaves cordate opposite 3-lobed, Segments ovate coarsely toothed, Stipules triangular
19905 Annual prostrate hairy, Leaves on long petioles rather fleshy 5-lobed, the lower lobes much the smallest, the others 3-lobed and slightly serrated, Peduncles 2-flowered, Petals obovate entire [capitate
19906 Lvs usually 12 pairs lanc -obl cuspidately acum , Stams length of Cor , Brnchs and Petis downy, Flws densely
19907 Leaflets 6—8 pairs oblong-lanceolate cuspidately acuminated, Bracts connate downy 3 times as long as tube of calyx, Flowers densely capitate, Stamens 11 free shorter than corolla
19908 Leaflets 4 pairs unequal-sided oblong or oblong-obovate cuspidately acuminated glanduliferous at base, Flowers racemose, Involucrum and Calyx tomentose

and Miscellaneous Particulars.

19140 *Gelasine azùrea.* This is a very pretty plant, with the habit of *Moræa*, and will thrive in a mixture of loam, [illegible] and sand, and is increased by offsets.

19141 *Luvánga scándens.* This is a climbing hothouse plant It will grow in any light rich soil, and can be easily increased by cuttings in the usual way The plant may be trained to a rafter or trellis.

19142 *Brównea grándiceps* and *Arùm* require to be grown in a moist stove. A rich free soil is the best for them- [illegible] out in a border, or in a large tub, they form splendid objects. The best way of propagating the species is by seeds, when they can be procured, which germinate readily in a hotbed.

History, Use, Propagation, Culture,

3142. *Wallùra.* The *W robùsta* is a large timber tree, and the bark of *W. piscìdia* thrown into fishponds causes the fish to float upon the surface of the water, as is the case with Indian berries (*Cocculus indicus*), rendering the fish easily caught; and the fish so caught is said to be not the less wholesome. The trees are cultivated and propagated in the same manner as ordinary stove plants.

3143. *Cheirostèmon platanoìdes* is a noble tree, growing 15 feet in diameter, and 100 feet and more in height. It succeeds well in turfy loam and peat, or any light rich soil. Half-ripened cuttings will strike root under a hand-glass but the leaves should not be shortened. It is generally called the hand-plant

3144. *Napoleòna imperiàlis.* This shrub has excited more than ordinary interest, arising partly from the circumstance under which it was first discovered, and partly from its name, given in honour of one of the most remarkable men that ever lived, and still more from the singular structure of the flowers as exhibited by Baron Palisot de Beauvais, so remarkable, indeed, that doubts have been expressed of the very existence of such a plant. It was discovered by him in the year 1786, in the kindom of Waree, in Benin, on the west coast of Africa; and the author justly prides himself upon the discovery of the *Napoleòna*, as likely to constitute a new order of plants between

[nectary is not present

19909 Lvs pinnate, Leaflets 5 lanceolate, Panicles terminal and axillary, Filaments distinct consequently the exterior
19910 Leaves subternate, Leaflets oblong obtuse

19911 Leaves 5—6-lobed palmate-nerved, Flowers bibracteate hoary tomentose opposite the leaves, Stamens 5 joined at base and recurved at top giving the appearance of a hand

19912 Leaves rather coriaceous broad oblong acuminated, Flowers axillary apricot-coloured

DODECANDRIA

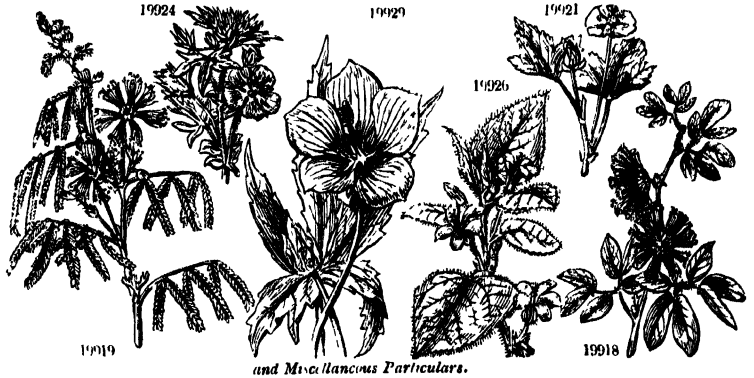
19913 Arboreous, Branches tomentose, Leaves large downy cordate serrated 3 lobed, Lobes acuminate, Stipules ovate acuminate, Peduncles elongated tomentose dichotomously umbellate, Petals lanceolate falcately flexuous
19914 Arboreous, Brnchs and Petioles hairy, Lvs cordate usually serrulated downy above tomentose beneath, Stipules ovate acuminate, Peduncles elongated, Corymbs compound, Sepals reflexed, Petals obliquely spatulate

19915 Covered with stellate tomentum, Leaves roundish-cordate serrulated, Peduncles axillary, Cymes 10—12-flwd, Leaflets of Involucel roundish a little shorter than calyx reflexed and deciduous

19916 Arbor., Brnchs clammy, Lvs rndsh cord 3—5-lbd scr , Lbs acum , Stips cord acute, Pedunes axil nearly term sol bibract , Bracts cord. concave keeled, Pedcs and Cals hairy, Pets spreading, Ster Fils elong , Anthers 15

19917 Lvs lanceolate acuminate serrated exstipulate pale green above but covered with scurfy stellate down beneath as are the branches, Flowers racemose at top of branches

POLYANDRIA.



19918 Branches puberulous, Stipules small falcate, Pinnæ 1 pair, Leaflets obovate falcate downy, Peduncles axillary fascicled glandularly downy
19919 Branches and Petioles pilose, Stipules ovate acuminate, Pinnæ 3—4 pairs, Leaflets many pairs oblong-linear acutish ciliated pilose beneath, Peduncles longer than petioles, Bracts linear deciduous, Legume villous

19920 Lower lvs 5-lobed, upper ones palmately 5-cleft, Lobes toothed, Stems and Calyxes rough from stellate hairs
19921 Prostrate hairy, Lvs on long petioles 3—5-lobed, Lobes oblong-cuneated deeply toothed, Stipules broad-ovate Peduncles axillary solitary 1-flowered, Ovaria hairy about 13
19922 Hairy subshrubby deciduous partly decumbent, Leaves sessile embracing the stem thrice pinnate or pinnatifid, Stipules ovate dry, Bracts often bifurcate, Corolla campanulate, Petals obcordate
19923 Downy, Leaves lobed or pedate 5—6-parted, cauline leaves divided into long linear lobes, Segments of Calyx ovate acute hairy, Leaves of Involucrum subulate, Flowers in terminal racemes
19924 Stems elongated procumbent, Lvs deeply 3-parted Lobes trifid or multifid lin -lanc acute, Stipules large broad, Peduncles axillary solitary 1-flwd, Leaflets of Involucrum 3 lin -lanc , Petals purple cream-coloured at base

19925 Lvs roundish-cordate 5 angled or 3-lobed crenate pilose, Stem Petioles and Peduncles hispid, Racemes bractless, Flowers twin, Petals emarginate, Involucrum 6—7 cleft

19926 Covered with starry down, Leaves orbicular cordate hardly toothed, Flowers axillary solitary or crowded at tops of branches

[Calyx large inflated 5-lobed 10-ribbed, Petals obliquely cuneate truncate, Stam column exceeding petals
19927 Lvs cord 5-lobed coarsely serrated, Lobes acute constricted at base, Lvs of Involucel minute subulate about 9,
2 This is a fine hybrid between *H Camedòni* and *H Rósa sinénsis*
19928 Prickly, Lvs large shining cordate 5—7-lobed villous beneath, Stipules cordate acuminate, Peduncles axillary twin 1-flowered, Leaves of Involucrum 10 lanceolate, Calyx pentagonal hispid inflated in front
19929 Lvs digitate, Lbs lanc acum toothed smooth, Flws axil sol on long pedunes, Lvs of Involucrum 12—19 narrow

and Miscellaneous Particulars.

Cucurbitaceæ and *Passifloreæ*. In 1843, Mr. Whitfield, a celebrated collector of objects of natural history, returned from one of his many voyages to Sierra Leone, and brought with him living and dried specimens of the plant In 1848 one of the living plants brought home by Mr Whitfield flowered in one of the hothouses at Sion House, the seat of the Duke of Northumberland

3145 *Astíria* is rather a handsome tree, with pink flowers. It is nearly related to *Ruízia*, and requires the same culture and treatment.

3146 *Asterotrichion* The ordinary culture given to greenhouse shrubs will answer this plant

3147 *Callisándra*. Pretty shrubs, with the habit of *Inga*, requiring the same culture and treatment

19922 *Málva campanulàta* should be kept in a cold frame in winter, and planted out into beds in summer, where it will make a fine show

3148 *Lopezia malacophýlla*. This is a pretty plant when in blossom, at which time it has much the appearance of *Cuphea*

Chirónia frutéscens. A mixture of loam, peat, and sand is a good soil for it, and half-ripened cuttings will root freely planted in sand under a hand-glass in bottom heat. The best way of increasing it is by seed, if procurable

Page 598. CLASS XVII.—DIADELPHIA STAMENS united in two separate parcels.

Order 2 HEXANDRIA Stamens 6.

3153. 1503*a*. *Dactylocápnos* Petals 4, cruciate, deciduous: the 2 outer ones sessile, equally gibbous at base, the 2 inner ones on long claws Stamens 4—6, collected into 2 bodies Berry cylindrical-oblong, many-seeded

Order 4 DECANDRIA Stamens 10

3154. 1545*a* *Brongniàrtia*. Calyx bibracteate, with a short tube 3 lower segments elongated, linear-lanceolate,

History, Use, Propagation, Culture,

3149. *Fugòsa* is a genus of pretty plants, which will grow best in a mixture of loam, peat, and sand, and may be readily increased by cuttings or seed They should be treated like greenhouse species of *Hibiscus*

19943 *Abùtilon esculéntum* is called *Bencao de Dios* in the province of Rio Janeiro in Brazil, where the inhabitants dress and eat the flowers with their viands

3150 *Goèthia striatiflòra* is a handsome small shrub, with scarlet peduncles and calyxes, and whitish corollas Any rich light mould will suit it, and cuttings strike root readily The plant thrives best in a moist warm heat.

19930 Branched, Lvs glab divided to base into many linear segments which are again divided, Segments of Calyx lanceolate, Corolla blue with a crimson base [solitary 1-flwd bracteate, Involucre 1-leaved 10–12-parted
19931 Covered with stellate hairs, Lvs cordate 3—5-lobed, Lobes obovate obtuse sinuately lobed, Peduncles axillary
19932 Tomentose, Leaves palmate cordate 3—5-lobed, Lobes obovate pinnatifid, Segments roundish rather crenate, Peduncles axillary 2-flowered, Involucel 15-toothed, Stigmas reflexed
19933 Branched, Lvs on long petioles ovate bluntish glabrous crenated or toothed, Petioles downy, Stipules subulate, Peduncles shorter than leaves

19934 Erect, Leaves bipinnate trifid or entire, Segments linear acuminated entire channelled rather fleshy, Peduncles axillary solitary 1-flowered bibracteate, Corolla lilac with a dark base
19935 Glabrous, Leaves entire or tripartite filiform or trifid, Segments linear-lanceolate acuminate pinnatifid in the lower ones coarsely toothed, Involucel obsolete or 6-parted with subulate segments, Segments of Calyx acuminate 3-ribbed, Stigma clavate

19936 Glab, Lvs cord deeply 7-lobed, Lobes lanc acum deeply ser, Stips subul lanc, Peduncs axillary solitary 1-flwd jointed at top, Calyx large camp, Tube glob. with 10 lamellæ, Petals broad spatu conc. connivent veiny
19937 Leaves cordate 3—5—7-lobed, Lobes acuminated serrated, Peduncles terminal racemosely umbellate, Carpels bristate at top
19938 Hairy and downy, Leaves cordate obsoletely lobed and toothed, Peduncles axillary solitary 1-flowered, Petals imbricate yellow dark red at base Carpels numerous downy incurved
19939 Leaves orbicularly cordate acuminated glabrous above but clothed with stellate tomentum beneath 5–7-nerved entire, Peduncles axillary solitary 1-flwd, Flws large Petals retuse yellow with an orange spot at base
19940 Glabrous, Leaves cordate acuminated serrated 7-nerved Peduncles axillary solitary or twin jointed at top, Calyx covered with powdery down, Petals concave roundish painted Fruit downy
19941 Branchs hairy, Lvs downy 3-nerved at base, Stips subu, Peduncs axil twin or tern 1-flwd hairy, Cal ventric. 5-cleft with reflexed segments, Petals concave roundish veiny [globose villous muth 13–16-celled
19942 Covd with rusty tom, Lvs ov-lanc -obl obt acum toothed at top tom beat, Flws corymb capit, Caps sub-
19943 Clothed with grey down, Leaves cordate acuminate, Flowers axillary solitary Cells of Capsule 3-seeded
19944 Glabrous, Leaves cordate 3—5-lobed coarsely toothed acuminate, Peduncles axillary slender, Calyx campanulate, Petals erect ornamented with dark branched veins
19945 Lvs large cordate crenated, Flws pendulous with broad rich crimson veins almost covering the white ground
19946 Glabrous, Leaves cordate serrated tapering much to the apex entire, Peduncles solitary, Calyx truncate at base, Corolla large subglobose, Anthers collected into a globe exserted, Stigmas 10 capitate, Carpels 10

19947 Leaflets 7—11 oblong obovate cuneated at base acuminate at top glabrous, Flowers large, Tube of Calyx short truncate glandular at base, Petals very long white silky outside, Style slender, Stigma 5-lobed, Stamens yellowish red equal to petals, Anthers curved

19948 Leaves ovate acuminate coarsely and sinuately serrated at apex Flowers axillary aggregate on short red peduncles, Involucrum red 4-leaved, Leaflets cordate, Corolla white

19949 Leaves oval acute a little toothed, Peduncles 3—4-flowered pendulous, Petals longer than calyx

19950 Lvs obl-lanc acum glab entire on short petioles, Peduncs solit axil 1-flwd having 3—4 spatu bracts under the flwr, Sepals ovel-ellipt concave rather hairy, Ovary hairy 5 celd, Lobes of Stigma rudish lobat, Caps pea-formed

19951 Leaves obovate-oblong serrulated, upper ones entire, Flowers sessile solitary usually axillary cream-coloured, Styles 4 hardly unconnected

---

the 2 upper segments joined into a lip, which is bidentate at apex. Bracts longer than calyx Style filiform, simple at apex Legume oblong-compressed, stipitate, the seminiferous suture wingless

1155 1551*a* *Cajánus* Calyx campanulate, 5-cleft. Segments subulate, incurved at apex, the 2 upper ones joined together higher up than the rest Corolla with an ample vexillum, which is bicallous at base, and an obtuse straight keel Legume oblong-compressed, oblique, tomentose, 2-valved. Seeds many, nearly round, separated by membranous partitions

1156 1636*a* *Plagiolóbium* Calyx bilabiate Upper lip broad and retuse, lower lip tripartite Keel obtuse Ovarium sessile Style persistent, unilateral Legume inflated coriaceous, obliquely transverse, 2-seeded Seeds strophiolate

and Miscellaneous Particulars.

3151 *Trochetia grandiflóra* is a pretty shrub, with pendulous red peduncles and white flowers It will grow best in a compost of sand, loam, and peat, or leaf mould, and young cuttings will strike root readily. It requires a moist heat

3152 *Polýspora axillàris* is a beautiful shrub when in blossom. A mixture of loam, peat, and sand will suit it, and cuttings not too much ripened will strike root if planted in sand, placed under a hand-glass in heat, or it may be grafted on the single red *Camélia japónica*.

3157. 1552*a*. *Wistària* Calyx campanulate rather bilabiate: Upper lip with 2 short teeth, lower lip with 3 subulate teeth. Vexillum bicallous. Wings conforming to the keel, which is 2-edged. Legume on a short stipe, coriaceous, 2-valved, 1-celled, rather torulose at the seeds

3158 1553*a* *Physaldbium* Calyx campanulate, bilabiate Upper lip bidentate, lower one tripartite. Corolla Vexillum shortly unguiculate, broad, orbicular, subreflexed, longer than wings, exappendiculate at base; Wings adhering beyond the middle to the keel, which is incurved and obtuse Ovarium many-ovulate. Style short, ascending glabrous Stigma capitate Legume oblong, turgid, coriaceous, many-celled Seeds strophiolate.

3159 1553*b* *Hardenbérgia* Calyx campanulate, 5-toothed, subbilabiate Vexillum orbicular, exappendiculate, hardly unguiculate, longer than wings, which are obliquely obovate-oblong. Keel adhering beyond the middle to the wings, incurved, obtuse Style short, subulate Stigma capitate, a little pencilled Legume linear-compressed, somewhat many-celled, and many-seeded Seeds strophiolate.

3160 1553*c*. *Zichya*. Calyx campanulate, 4-cleft Upper segment bidentate, the 3 lower ones approximating into a lower lip Corolla Vexillum, unguiculate very broad, rather reflexed. Legume coriaceous, oblong-linear, compressed, thickened at semmiferous suture, many-celled, exappendiculate at base Wings oblong, shorter than vexillum, adhering to the keel beyond the middle Ovarium many-ovulate Style short, subulate, dilated into a capitate stigma.

3161 1553*d* *Comptosèma*. Calyx bibracteate 4-cleft Petals of Corolla equal, obtuse, on long claws. Vexillum and Keel bicallous at base Wings unicallous Legume linear-oblong, many seeded. Vexillum ovate oblong Keel of 2 nearly separate petals

History, Use, Propagation, Culture,

3153. *Dactylocápnos thalictrifolia* grows freely in any light rich earth, and grows well against a south wall, training it to a support. It is increased by seed.

3162. 1557*a* *Platystylis.* Calyx campanulate, 5-cleft, the 2 upper lobes shortest Style broad, spatulate, and villous at apex. Legume many-seeded Seeds nearly globose

3163 1566*a* *Calycblome* Calyx bilabiate. Lips minutely toothed, short, deciduous, leaving a circumcised tube Petals 4, free. Keel oblong, bluntly beaked Glands of Stigma capitate. Legume oblong-linear, many-seeded, at length spongy Endocarp coriaceous, separating from the epicarp

3164. 1588*a* *Onobrychis.* Calyx 5-cleft, nearly equal. Corolla with short wings and truncate keel Legume of one compressed, indehiscent, echinated crested or winged, 1-seeded joint, which is thickest on the upper suture

3165 1588*b*, *Oxytropis* Calyx bilabiate Upper lip bidentate, lower tripartite Petals of equal length Vexillum acuminate, plicate Keel beaked. Ovarium stipitate, compressed, elliptic-subrhomboid. Legume ovate, compressed villous, 1-seeded

3166 1588*c* *Amicia* Calyx campanulate, 5-cleft 2 upper lobes roundish, large, 2 lateral ones minute, the lowest one oblong, keeled and concave Corolla with an orbicular vexillum, and with the wings applied to the keel Stamens monadelphous, with tube cleft in front Legume linear, compressed, many-jointed Joints truncate at both ends

3167 1591*a* *Cyclogyne* Calyx campanulate, with unequal segments Vexillum emarginate Wings short Keel larger than wings, of 2 petals, which are connate at base Ovarium villous, many-ovulate Legume inflated oblong, 1-celled

3168 1601*a* *Iénnea* Calyx campanulate, subbilabiate Upper lip bidentate, lower one tridentate Corolla Vexillum obcordate, length of wings Stamens monadelphous Style filiform, with a pilose line Stigma capitellate.

HEXANDRIA.

[lobes Bracts oblong entire, Racemes elongated, Spur longer than pedicels

19952 Stem simple furnished with leafy scales under the leaves Leaves biternate with tripartite segments and oblong

19953 Stem a little branched, Leaves bipinnate glaucous, Lobes oblong-linear, Bracts ovate-pointed, Capsule linear torulose twice as long as pedicels

19954 Glab glauc, Stems and branchs twisted Petioles ending in branched tendrils, Lvs tritern, Racs axil or opp the lvs on long peduncs, Fls abt 20 lge obl flesh yellish with rubesc mouth, Berys obl indehis. fleshy pale yl

19955 Spurs 2 blunt ventricose short, Stems leafy, Segments of leaves obovate cuneated cut

[Leaves supradecomposed with linear lobes

19956 Pods globose hardly mucronate, Floriferous Pedicels erect longer than bracts, Racemes short, Stems erectish,

OCTANDRIA

19957 Shrubby, Leaves elliptic-acuminate at both ends, lower ones ovate, Branches downy, Racemes elongated

DECANDRIA

[rather deltoid, Calyx campanulate spathaceous, Vexillum linear cuneated straight long

19958 Arboreous prickly, Leaflets ovate acuminate 3-nerved glabrous rounded and truncate at base, the middle one

19959 A beautiful hybrid from *E. herbácea* impregnated by *E. Crista-gálli* It was reared at Sidney by Mr Bidwill.

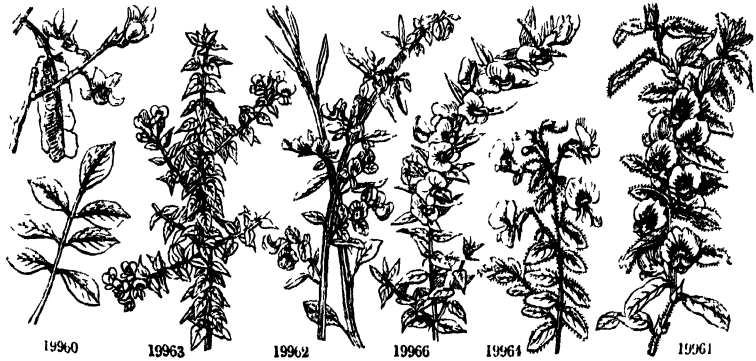
19960 Leaves pinnate, Leaflets obovate downy, Stipe of Legume scarcely longer than calyx, Wings continuous

[Bracts ovate lanceolate

19961 Branches weak downy, Leaves oblong-lanceolate mucronate rather cordate at base, Stipules ovate acuminate,

[Calyx straight, Legume glabrous

19962 Glabrous, Branches elongated twiggy 2-edged winged leafy, Leaves petiolate elliptic obovately linear, Teeth of [lose on the nerves beneath with revolute edges, Peduncles bibracteate equal to leaves



19963 Branches terete crowded with leaves villous, Leaves nearly sessile cordate acute mucronate scabrous above pi-

19964 Young branchs terete, Lvs distich ov obt mut, Stips longer than petis, Pedunes solit. axil 1-fld longer than lvs

19965 Branchs ter prost downy, Lvs ellipt muc, Pedunes elong. solit 1-fld, Bracts downy, Cor twice as long as calyx

19966 Procumbent, Branches terete diffuse filiform, Leaves ovate acutish rigid mucronate downy as are the branches, Flowers solitary axillary forming racemes at tops of branches [sistent hooked longer than petioles

19967 Branches terete villous, Leaves small orbicular retuse scabrous with revolute edges silky beneath, Stipules per-

and Miscellaneous Particulars.

19968 *Erythrina umbrosa* This tree is planted in Caracas and Trinidad for shade to the plantations of *Theobroma Cacao*, for two rows of *Theobroma* there is one of *Erythrina*

History, Use, Propagation, Culture,

3154 *Plagiòbium*. The species are worth cultivating in every collection of greenhouse plants, for the sake of the beauty of their flowers and for their holly-like leaves. They may be propagated by cuttings planted in a pot of sand, having a bell-glass placed over them; but better plants may be produced by seeds, which often ripen in our greenhouses.

19967. *Ulex stricˈtus*, the Irish furze, is an upright plant with soft spines. It is an excellent plant for hedges.

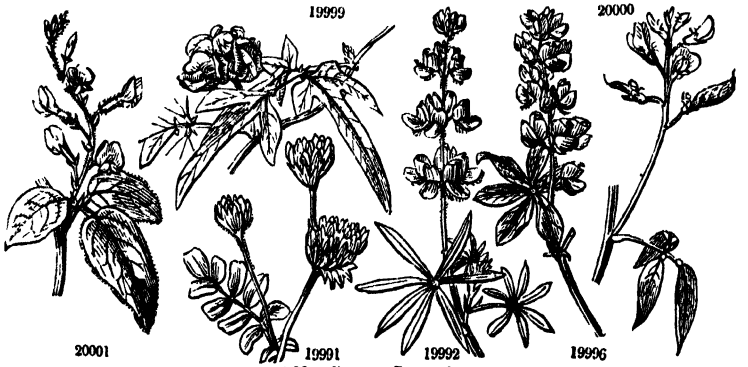
19968 Lvs elliptic-oblong acute glabrous as are the branches, Peduncles axillary solitary hardly longer than petioles
19969 Lvs linear with revo. edges glab. or a little pilose stiff mucronately pungent, Stips bristle-formed Pedicels a little longer than calyx, Ovarium stipitate glabrous [most sessile
19970 Lvs slightly cordate at base mucronate, Calyx clothed with dark brown tomentum, Peduncs usually in pairs al-
19971 Lvs lanc glab above and finely reticulated tom ben, Racs axillary loose many-flwd, Upper Lip of Calyx large
19972 Lvs lanc. obt terminat in a tuft of hairs glab above clothed with long dense tom ben, Brnchs villous as are the legumes and calyxes, Peduncles almost sessile 1—2—3-flwd [nerve ending in a mucrone
19973 Lvs lanc with revo edges tom beneath and smooth above coriaceous tapering to the apex with strong middle
19974 Lvs ov.-lanc tap to the apex muc. tom ben. and smooth ab Brnchs vil Peduncs very short few-fld, Fl small
19975 Lvs obl.-lin or lanc. lower ones ellipt retic ab downy ben, Pedncls shorter than cal, Leg. stipl glab 3 seeded
19976 Lvs lanc tapering to both ends mucron. clothed with rusty tom ben as are the brnchs glab ab, Peduncs 2—3-flwd Pedicels longer than peduncles [Peduncles twin axillary
19977 Lvs obl.-lin. mucron smooth above tom. and retic veined ben with revo. edges, Brnchs clthd with rusty tom,
19978 Leaves linear reticulated with revolute edges clothed with rusty tomentum beneath as well as legumes
19979 Branchlets tomentose Leaves oval spiny-toothed mucronate pungent reticulated beneath, Stipules spinescent, Peduncles 2—3-flowered, Calyx tomentose bracteate pungent glabrous, Legume roundish glabrous

19980 Leaves oblong-lanceolate spiny-toothed mucronate coriaceous glabrous, Pedicels axillary 3—4 together, Legume transverse glabrous
19981 Leaves ovate or elliptic coriaceous spiny-toothed mucronate glabrous, Pedicels axillary twin legume kidney-shaped downy

[neath, Stipules lanceolate short, Spikes terminal, Lower lip tridentate, Legume hairy
19982 Branches nodulose, sterile ones mucronate, floral ones pendulous, Leaves trifoliate, Leaflets elliptic silky be-
19983 Hoary-downy, Leaves trifoliate, Leaflets obovate very blunt narrowed at base, Racemes terminal elongated [cate, Calyx and Corolla a little silky
19984 Leaves few sessile trifoliate and simple, Leaflets linear smoothish, Branches spinescent, Flowers alternate spi-
19985 Leaves sessile trifoliate and simple glabrous, Leaflets linear-lanceolate, Branches spiny, Spines branched, Ra-
19986 Leaflets linear, Branches usually simple and shorter [cemes term, Calyx Corolla and Legume glabrous
19987 Glabrous diffuse, Branches angular, Leaves ovate-elliptic veiny, Flowers racemose, Corolla three times longer than calyx, Legume 8—10-seeded

19988 Erect, Leaves linear ciliated, Spines branched pubescent as are the branches

[arched, at length recurved
19989 Diffuse covered with glandular down, Leaves obovate toothed simple, Stipules entire, Peduncles long 1-flowered
19990 Erect hairy unarmed, Leaves trifoliate, Leaflets obovate serrated, Flowers solitary, Calyx hispid equal in length to corolla but twice the length of legume [silo distant alternate
19991 Procumbent, Lvs pinnate villous as are the branches, Leaflets 23—35 oval-oblong equal, Heads numerous ses-
19992 Erect white from silky down, Leaves pinnate, Leaflets 7—11 oval-acute, terminal one largest, Heads of Flowers subcompound bracteate, Bracts cuneate roundish hardly multifid, Calyx subcylindrical



19993 Hairy, Leaflets 7 lanceolate-linear, Flowers racemose verticillate, Whorls 5—6-flowered
19994 Decumbent hardly canescent, Leaflets 7—5 oblong-lanceolate bluntish mucronate downy beneath, Flws densely racemose, Bracts pilose, Calyx bractl downy, Legume elongated downy [Wings purple, Standard white
19995 Downy pilose, Lfls 5—7 obl.-lanc. mucron, Racs elongated, Flws verticil, Leg hairy tom 8-seeded, Keel and
19996 Canescent hairy, Stipules small subulate, Leaflets 7—9 oblong-lanceolate acute shorter than petioles, Flowers in loose whorls, Bracts short caducous, Corolla glabrous
19997 Decumbent downy, Leaflets 5—9 lanceolate, Stipules setaceous free, Racemes subverticillate, Bracts subulate, Corolla glabrous, Wings obtuse, Legume hairy slender about 4-seeded, Seeds cinereous clouded
19998 Stem hairy a little branched, Leaflets 5—7 narrow obovate rather fleshy blunt silky beneath, Racemes whorled, Legume narrow tumid, Standard having a white spot in the middle

19999 Leaflets oval mucronate 9 pairs downy on midrib and beneath smooth above, Flowers axillary solitary dirty purple

19999 Leaflets hastately 3-lobed, middle lobe on a long petiole, lateral lobes lobed, middle lobe elongated, Peduncles equalling the lvs many-flwd, Petals yellow twisted a little, Keel long acum. densely and spirally convol as style

20000 Vexillum purplish outside, Legume 4—5-seeded spotted, Stipules of lateral leaflets about equal in length to the petiolule

[Vexillum 2-lobed
20001 Twining pilose, Leaflets oval mucronate pubescent, Racemes erect axillary many-flowered shorter than leaves,

and Miscellaneous Particulars.

3155 *Brongniártia sericea* is a pretty shrub, and will thrive in any rich light soil; and young cuttings will root if planted in sand under a bell-glass.

3156. *Cajánus* is generally propagated by seed received from the tropics, where they are used in the same manner as we do common peas, and esteemed a wholesome pulse, which some prefer to common peas. In Jamaica they are chiefly used for feeding pigeons.

History, Use, Propagation, Culture,

3157 *Wistária* is a genus of splendid, early-flowering, climbing woody plants They like a light soil best but will grow in any soil. They are quite hardy If planted and trained against a south wall, or to the front of a house, flowers in great profusion They are increased by cuttings.

3158. *Physalóbium*. Splendid climbers, requiring the same treatment as *Hardenbérgia*. Like the species of all the genera separated from *Kennédya*, it is well fitted for training up rafters or trellis-work in a conservatory

3159. *Hardenbérgia* is a genus separated from the old genus *Kennédya*. Loam, peat, and sand are found to be

20002 Wings of Corolla with one auricle each, Ovarium villous

β Flowers pure white

20003 Hairy, Leaves trifoliate Leaflets ovate-oblong, Racemes axillary, Peduncles pilose, Calyx villous, Flws scarlet, Standard with a yellow blotch at base

20004 Leaflets ovate or orbicular retuse mucronate silky pilose as are the branches, Stipules and bracts ovate-cordate, Peduncles 2-flowered axillary shorter than leaves, Keel shorter than wings

20005 Leaves trifoliate, Leaflets ovate-oblong retuse mucronate, Racemes many-flowered half-erect or partially drooping [ny-flowered, Vexillum acute

20006 Lvs digitate, Lflts 5 ovate-oblong obtuse, terminal one on a longer petiole, Stips triang Racs pedunculate ma-

20007 Lvs trifoliate, Leaflets oblong-obtuse mucronate, Stipules ovate-acuminate, Racs many-flwd longer than leaves pedunculate

20008 Leaflet solitary simple cordate-ovate apiculate equal to petiole in length, Superior stipules ovate, Racemes many-flowered longer than leaves

20009 Leaflets 3 cuneate glabrous, Petioles and stems pilose, Stipules broad-ovate acute, Bracts deciduous, Peduncle 6-flowered length of leaves [Corymbs dense capitate many-flowered on long peduncles

20010 Villous, Leaflets 3 ovate obtuse, Segments of Calyx shorter than tube, Keel equal to wings, Style simple at apex

20011 Leaflets 3 obovate obtuse subrepand, lower ones ovate lanceolate acute downy beneath, Keel nearly equal-

20012 Vexillum scarlet with a yellow base, Keel and wings purplish [ing wings, Style hardly dilated at apex

20013 Leaves trifoliate, Leaflets cuneate mucronate a little hairy above and silky beneath, Stipules ovate-acute, Peduncles many-flowered, Flowers umbellate Calyxes covered with black hairs

20014 Leaves trifoliate, Leaflets obovate emarginate clothed with silky hairs especially in the young state, Calyxes villous

20015 Glabrous Leaves trifoliate, Leaflets elliptic retuse, middle one on a long petiole, Racemes compound axillary, Pedicels hardly equalling the calyx in length

[expanded

15 Stems many hairy, Leaflets 3 ovate pilose with fringed edges, Racemes pedunculate, Vexillum hardly

[dunces 4—6-flowered, Style jointed

20017 Roots tuberous fascicled, Leaflets 3—4 pairs oblong-lanceolate cuspidate, Stipules semi-sagittate subulate, Pe-

20018 Villous, Root creeping, Leaves ternate and with 2 pairs of leaflets, uppermost ones simple, Leaflets long filiform, Stipules ovate-lanceolate acuminated, Racemes pedunculate filiform, Two upper teeth of Calyx shorter

20019 Leaflets 2—3 pairs approximate linear-lanceolate acute, Stipules equal in length to petiole, Peduncles few-flowered longer than leaves, Legume oblong

20020 Leaflets 1 pair linear-subulate, Stipules semi-sagittate subulate longer than petiole, Peduncles few-flowered longer than leaves, Style jointed spatulate, Legume narrow

[dunc racemose blue, Tendrils branched

20021 Suffruticose branched glaucous, Lvs 1 pair, Leaflets ovate sessile mucr. veiny, Stipules arrow-shaped, Flws pe-

20022 Glabrous, Stem angled, Leaflets 1 pair elliptic-ovate acute mucronate nerved, Tendrils twice trifid, Petioles very short, Stipules semi-sagittate, Peduncles many-flowered

20023 Downy, stem 4-angled winged, Leaflets 1 pair oblong-lanceolate nerved mucronate tendrilled, Stipules semi-sagit, Tendrils trifid, Peduncles many-flwd, Calyx and ovarium silky [cles longer than lvs usually 4-flwd

20024 Suffrutic. tom, Stem angul. branched, Stips semi sagit twice as long as petis, Lflts obl-linear mucr, Pedun-

20025 Suffruticose, Stems angular, Leaves on long petioles, Leaflets 1 pair lanceolate rather downy mucronate, *Stipules minute, Peduncles 6—8-flowered longer than leaves*

20026 Pilose, Stems angular, Leaflets 6 pairs elliptic retuse veined white beneath full of pellucid dots, Stipules small semi-sagittate entire, Peduncles many-flowered Style pilose, Upper segments of Calyx long subulate

20027 Peduncles 1—7-flowered, Leaflets 3—4 pairs linear-acute, Tendrils simple, Legume sublinear-oblong mostly 6-seeded, Seed mottled [flowered, Legume lanceolate 14—20-seeded

20028 Leaves tendrilled, Leaflets ovate-oblong obtuse entire mucronate glabrous, Stipules toothed, Peduncles 8—10-

and Miscellaneous Particulars

for the species They require the same treatment as other twining greenhouse plants, by being trained up a or on any convenient trellis-work.

Zichya Splendid greenhouse climbers, requiring the same culture and treatment as *Hardenbérgia*

Camptosèma requires the same treatment as *Hardenbérgia*.

Platystylis is a genus of elegant early-flowering plants, well adapted for the front of flower borders. A light soil suits them best, and they are readily increased by seed, or by dividing the plants at the root.

History, Use, Propagation, Culture,

20030. *Cytisus Weldènii* is now a common shrub in our gardens and pleasure-grounds. It has leaves as large as those of *Laburnum*, but the racemes of flowers are erect.

3163. *Calycótome spinòsa* is a pretty shrub, and will be hardy in mild winters. It grows in any light rich soil in an airy situation It may be propagated by layers, but best by seed

3164 *Onobrýchis* requires the same treatment as the species of *Hedýsarum*

3165. *Oxyrámphis macróstyla* is a pretty greenhouse shrub, and is said to grow freely in a mixture of sandy loam and peat. It loses its leaves in winter The flowers are half crimson and half rose-coloured, disposed in

[ed edges, Segments of calyx lanceolate elliptic bearded
20029 Slender branchd, Leaves ovate-elliptic acuminate 3-nerved, Flowers capitate, Bracts orbicular acum. with beard-
β Leaves narrower

20030 Erect Leaves ternate, Leaflets broad-elliptic entire obtuse glabrous, Racemes terminal pedunculate erect, Pe-
dicels villous, Calyx 3-lobed ciliated, Keel villous, Legume glabrous

20031 Branches angular, Leaflets obovate-oblong, Legume glabrous

[on the ordinary Locust Tree
? This is a fine tree pretty common in our gardens It has a dense umbrella-formed head. It is generally grafted
20032 Unarmed Leaflets ovate roundish, Branches and Peduncles glabrous, the three lower teeth of Calyx acumi-
nated, Flower large rose-coloured racemose

[bracteate at base
20033 Petioles spinescent, Leaflets 4—5 pairs oval obtuse apiculated silky, Peduncles 3-flowered, Calyx glabrous bi-
20034 Leaflets 2 pairs ovate acute glabrous, Stipules spinose

[gume inflated stipitate
20035 Hoary tomentose, Leaflets 5—8 pairs oblong or retuse, Racemes many-flowered, Calyx woolly bibracteate, Le-
20036 Suffruticose smooth, Leaflets 9—15 pairs linear-oblong retuse, Racemes few-flowered, Pedicels bractless, Calyx
ciliately toothed, Standard yellow at base

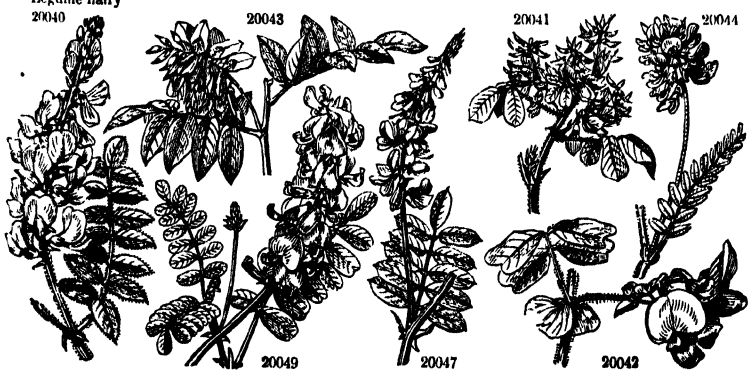
20037 Herbaceous villous decumbent, Leaves opposite seldom alternate obovate-oblong, Stipules toothed, Peduncles
few-flowered umbellate shorter than leaves, Segments of Calyx acuminate Ovarium shaggy
20038 Leaflets 2—3 pairs ovate shining glabrous, Racemes erect few-flowered, Vexillum straight bluntish

20039 Erect glabrous, Leaflets oblong apiculated ciliated, Stipules adnate, Racemes terminal and lateral, Peduncles se-
tose, Calyxes ciliated

20040 Stem erect hispid, Leaflets ovate obtuse mucronate hairy beneath, Spike long many-flowered, Wings of Corolla
sagittate much shorter than calyx, Calyx and Legume villous

20041 Leaves trifoliate, Leaflets obovate retuse coriaceous mucronate silky villous beneath as are the branches, Ra-
cemes axillary, Legumes ovate compressed 1-seeded villous

20042 Leaflets 2 pairs cuneate obcordate truncately retuse, Legumes biarticulate



[dense, Calyx 5-toothed Vexillum oblong, upper edge of Keel villous
20043 Glabrous glaucescent, Leaflets 2—6 pairs ovate obtuse mucronate with a few peltate hairs beneath, Racemes
20044 Clthd with rufes down, Lflts 10—16 prs oval ret muc, Spks axil, Brcts and Stips lin. hisp, Teeth of Cal ov. ac.
20045 Downy, Leaflets 18—22 pairs linear acute, Racemes axillary sessile, Calyx cup-shaped, Ovarium 7-ovulate

[downy, Style glabrous, Stigma capitate
20046 Leaflets 9—10 pairs oblong obtuse downy, Racemes axillary horizontal many-flowered, Calyx bibracteolate

[ceolate sagittate, Bracts linear subulate
20047 Stem angular flexuous, Leaflets usually 5 pairs ovate oblong rather retuse mucronate glaucescent, Stipules lan-
20048 Stem striated flexuous, Leaflets usually 5—8 pairs oblong downy mucronate 2-lobed, Stipules ovate-lanceolate
acute serrated sagittate, Flowers crowded, Bracts subulate

20049 Clothed with white down, Stems numerous villous, Leaves pinnate, Leaflets 13—15 obovate-oblong smooth above
and white from down beneath, Peduncles erect many flowered, Flowers almost sessile

[of Cor equal
20050 Flws in capt heads ov. ses Brcts imbricate, Cal plumose 5-cleft, Lvs woolly, Lflts 3 pairs oval awned, Segs
20051 Flws axil ses somewhat capit, Cal 5-cleft rather longer than cor with woolly lobes, Lflts 6—7 pairs lanc vil
20052 Tomentose prostrate branched, Stipules concrete, Leaflets 11—14 pairs elliptic retuse, Peduncles racemose,
Legume hairy

and Miscellaneous Particulars.

a short close raceme. The leaves are much like those of a species of *Tephrósia*

3166 *Amicia* requires the culture and treatment of other hothouse climbing shrubs.

3167 *Cyclógyne canéscens* is a pretty greenhouse plant. The flowers are numerous, purple, with a blotch of green in the centre A rich loam and airy place in the greenhouse is said to suit it best.

3168 *Lennèa*. This is a shrub with small impari-pinnate leaves, and clusters of pretty drooping flowers It loses its leaves in winter, and grows well in the open air in summer; but, as it flowers in May or earlier, it can only be treated as a greenhouse plant.

20045 20052 20048

History, Use, Propagation, Culture,

3169 ***Astartèa fasciculàris*** is a very pretty greenhouse shrub, and differs principally from *Melaleùca* in the bundles of stamens being alternate with the petals, not opposite to them as in that genus; and in the flowers being pedicellate

20053 Erect silky, Leaflets 3—5 obovate-oblong mucronate glandular beneath, Spikes ovate, Calyx downy with lanceolate pointed teeth

20054 Lflts obcord or obl scr. upper ones lanc., Stips subu , Racs loose, Pedicels half as long as calyx, Wings and Stand equal longer than keel, Pods ov obt. muc. rnded and slightly keeled on back, transvly. plic. rug glab

[Teeth elong , Wings shorter than obov vexillum and longer than apiculated keel, Legume obl. 3—4-seeded
20055 Ascending, Leaflets rhomb-oval denticulate, Heads globose terminal, Flowers reflexed, Tube of Calyx short,
20056 Leaflets roundish spinosely denticulated, Stipules large membranous entire cuspidate, Heads round involucrated, Leaflets of Involucrum connate at base ovate-lanceolate acuminate with membranous edges

20057 Leaflets 7 pairs ovate or oblong mucronate, Stipules ovate Umbels many-flowered capitate, Peduncles furnished with a simple or trifoliate bract just under the umbel, Teeth of Calyx very short

20058 Glabrous, Leaflets 4—5 pairs elliptic yellowish green membranous retusely emarginate at top, Racemes solitary, Teeth of Calyx puberulous on the margin

20059 Leaflets rhomb-obovate apiculate denticulated towards the top Stipules pinnatifid, Peduncles usually 3-flwd, Legume depressed biconvex of 5 cycles veiny with smooth edges

---

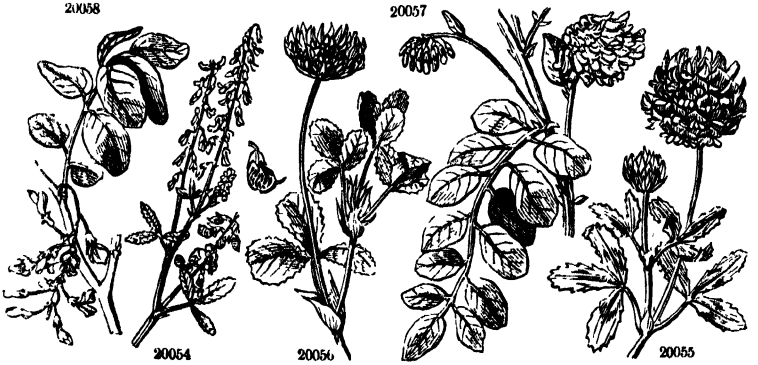
3171 1619*c*. *Caióphora*. Calyx 5-parted, with jagged segments Petals 5, unguiculate. Scales 5, emarginate or 4-toothed at apex, each furnished with 4 sterile filaments inside Stamens numerous, disposed in 5 bundles Style trigonal Stigmas 3, connivent Capsule ovate-oblong, with elevated spiral ribs, and covered by the reflexed calyx, 1-celled, many-seeded, opening at 3 of the sutures Seeds angular, echinated

3172 1619*d* *Microspérma* Calyx with an ovate tube and a 5-parted spreading limb Petals 5, spreading, obovate Stamens numerous, in 5 bundles, joined with the bases of the petals Ovarium free at top Style filiform Stigma furrowed, not divided. Capsule 1-celled, many-seeded Receptacles 5, filiform, parallel Seeds numerous, very minute oval-oblong, angular

---

POLYANDRIA.

[Flowers spicate, Calyx glabrous



20060 Leaves alternate approximate subimbricate ovate-lanceolate acuminate broad at base sessile spreading at top,
20061 Leaves alternate terete stiff mucronate glabrous in adult state, Heads of Flowers small globose hairy the rachis villous, Bundles of Stamens 4—6-anthered with the claws equal in length to petals
20062 Leaves alternate coriaceous linear-oblong narrow at base veinless, Flowers axillary dense quite glabrous, Bundles of Stamens 8—12-anthered a little longer than petals
20063 Branches twiggy glabrous, Leaves alternate linear acute glabrous distant recurved at top, Bundles of Stamens few-anthered, having the claws length of petals

20064 Leaves opposite linear fleshy downy disposed in axillary fascicles when young, Flowers pedicellate axillary solitary

20065 Leaves elliptic ciliated rather hairy on the nerves

20066 Bundles of Stamens equal polyandrous, Leaves clavate downy
20067 Glabrous, Leaves opposite or subverticillate tern or quatern strict very long terete filiform mucronate, Flowers numerous unilateral tetramerous, Bundles of Stamens nearly equal 5—7-androus declinate pinnatifid

20068 Branchs straggling slen , Lvs ovals ses obt ent smth pale green small, Clusters of Flls short, Style very long
20069 Rameal Leaves imbricate linear-lanceolate keeled obtuse 3-nerved at base, Floral Leaves cordate-ovate 3-nerved marginate, Bundles of Stamens hexandrous downy at base, Heads globose
20070 Leaves linear obtuse flat or lanceolate 3-nerved marginate spreading pilose as are the branches, Bundles of Stamens 3—4-androus villous at base

and Miscellaneous Particulars.

not adnate to the branches The plant grows and flowers freely in equal parts of loam, peat, and sand ; and ripened cuttings not too old, strike root freely in sand under a bell-glass

Page 660. CLASS XIX.—SYNGENESIA. STAMENS 5 ANTHERS united by their edges.

Order 1 *AEQUALES* Florets of the disk and ray all hermaphrodite

3173. 1627a. *Mulgédium* Heads many-flowered Involucrum calyculately imbricate outer scales much the shortest, imbricate Receptacle naked foveolate Achenia glabrous, compressed, often nerved, tapering above into a beak expanded into a cup-shaped ciliated disk. Pappus in one or few series. Bristles stiff, scabrous

3174. 1650a *Achyróphorus* All as in *Hypochæris*, except that the pappus is in one series and plumose.

3175 1668a. *Rhapónticum* Heads many-flowered equal. Scales of involucrum in many series adpressed ending each in an entire or toothed acuminate or roundish appendage with scabrous margins Receptacle beset with linear fimbrillæ Corollas all 5-cleft, nearly regular Filaments papillose Anthers terminated by an appendage Achenia oblong, compressed, glabrous, with an oblique basilar areola Pappus rufescent, in many series. Bristles stiff, scabrous

3176 1702a *Cerádia* Heads few-flowered, rayless Receptacle flat, alveolate. Involucrum 5-leaved, naked at base. Florets of the ray female, with oblong tubes downy achenia Pappus in many series, setose, scabrous Corollas filiform, truncate, shorter than styles, and branches of style linear obtuse Florets of the disk male with short linear achenia, and smaller subdeciduous pappus. Corollas ventricose, 5-toothed. Style filiform, truncate Anthers mutic at base.

3177 1706a *Barnadésia* Heads many-flowered Involucrum turbinate, of many series of imbricate scales outer scales radiating Paleæ of receptacle dense, hair-formed, twisted Flowers all bilabiate Anthers tailless Achenia turbinate, villous. Pappus in one series, plumose

3178 1706b *Stiffta* Heads discous, many- and equal flowered Involucrum closely imbricate Scales coriaceous dry, many-nerved, ovate-rounded, inner ones linear Receptacle alveolate, naked. Corollas subcoriaceous, glabrous regular, 5-cleft, 10-nerved Lobes circumnately revolute Filaments smooth Anthers exserted, long-tailed Style gla

History, Use, Propagation, Culture,

20073. *Símplocos japónica* is much used by the Japanese for decorating the shrines of their idols. It is known in Japan by the name of *Furoggi* When Thunberg first discovered the tree he took it for a myrtle, and Fortune for a holly

20075. *Citrus japónica* is called *Kum-quat* by the Chinese, and the *Kum-quat* groves of the Island of Chusan are formed on the sides of hills in those situations where the tea plant (*Thea viridis*) flourishes, and attain the height of 6 feet. The fruit ripens late in autumn, being then about the size of a gooseberry, of an oval form, having a sweet rind and a sharp acid pulp. It is largely used by the Chinese as a preserve, and very frequently finds its way to England as presents to those who have friends in China Preserved in sugar according to the Chinese method, it is said

20071 Leaves oblong-cuneate toothed, Flowers solitary, Bundles of Stamens tetrandrous, Branches pilose, Petals [emarginate
20072 Lvs lin quite ent vil when young but glab. in adult state, Floral ones naked at top, Flws at tops of branches among the lvs on short pedicels, Petals obl obov emarg., Sepals acum hoary downy outside longer than petals

20073 Leaves obovate cuspidate green and shining bay-like, Flowers in axillary clusters

20074 Shrub spiny, Leaves lanceolate tapering to both ends a little toothed, Petioles linear, Fruit compressed, Pulp [very sapid, Rind brownish orange
20075 Petioles winged, Stem angular, Flowers axillary solitary or twin, Fruit 9-celled

20076 Shrub spiny, Leaves emarginate oval-oblong nearly sessile quite entire obtuse with parallel veins, Flowers axillary fascicled or solitary

20077 Herbaceous, Leaves 4 in a whorl
20078 Stems erect or ascending terete Leaves linear obtuse with revolute margins, Flowers cymose, Sepals rather unequal Lanceolate with gland serratures and num black dots beneath, Stams about 30, Styles half as long as capsule

20079 Erect downy dichotomous beset with pungent bristles, Leaves rhomb-obovate or lanceolate acuminated lobed serrated, lower ones petiolate, upper ones sessile, Racemes terminal leafy, Petals indentate and Cal reflexed

20080 Hispid robust erect, Leaves impari-pinnate, Pinnæ 3 pairs oval ultimate ones confluent, Segments serrated, Calyx campan. hispid, Petals white downy ending in 2 bristles at apex scaly boat-shaped white striped with red

20081 Bristly, Leaves opposite elongated pinnatifid, Lobes of Calyx pinnatifid, Appendages 2 clavate filiform at top of smaller petals, Styles 3 winged, Epigynous disk lobed, Fruit straight turbinate

20082 A beautiful garden hybrid with scarlet flower

20083 Leaves ovate acute lobed serrated, Peduncles elongated 1-flowered, Flowers large, Petals acute, Stamens exceed ing the petals

---

Leaves bifid Achenia glabrous, elongated, short-beaked Pappus paleaceous, in many series, long, unequal Paleæ linear, serrated

1707 1708*a* *Helenium* Heads many-flowered Involucrum campanulate Scales in many series, subimbricate, ending in a coloured appendage Receptacle elevated, hairy Achenia angular Pappus in one series, scabrous

1708 1713*a* *Chabræa* Involucrum campanulate Scales in two series, oblong Receptacle chaffless Corollas bilabiate, glabrous Outer lobe of disk florets tridentate, inner lobe bipartite, with the lobes usually concrete Outer lobe of ray florets strap-shaped, revolute, tridentate, inner lobe smaller, bipartite Anthers bisetose at base and appendiculate at apex Achenia ovate, cylindrical, beakless, papillosely setose. Pappus in one series Paleæ concrete, combined into a ring at base, equal, subplumose

Order 2 SUPERFLUA Florets of the disk hermaphrodite, of the ray female.

3181 1730*a* *Helipterum.* All as in *Helichrysum*, except that the pappus is plumose.
3182 1744*a* *Monolopia* Heads many-flowered Florets of the ray ligulate, sometimes subbilabiate, those of the disk tubular, hispid Scales of involucrum 8—10, in one series, concrete to the middle Receptacle convex, chaffless Anthers tailless Branches of the styles of ray florets terminated by a cone Achenia glabrous
3183 1746*a* *Eurybia* Heads many-flowered Ray florets in one series, ligulate Receptacle small, flat, or a little convex, alveolate Involucrum imbricate with chartaceous scales Stigmas of the ray florets elongated, erect, obtuse scarcely hispid Achenia obovate-oblong, cylindrical, striated, or angularly winged, glabrous or downy at top Pappus in one series Bristles scabrous
3184 1746*b* *Olearia* Heads many flowered Ray florets in one series ligulate Receptacle alveolate, flattish, seated on the top of a hollow obcon cal p duncle Scales of involucrum at first adpressed, but at length spreading.

and Miscellaneous Particulars.

The excellent *Citrus decúmana* is nearly allied to *Citrus nóbilis*, the mandarin orange, with which it is confounded by gardens It differs from that kind of orange in the plant being spiny, in the leaves being a little toothed, in the fruit being small, 2 inches in diameter, and by no red outside or inside, and has a very agreeable pulp

3171 *Severinia buxifolia* is the small box-leaved orange It is best propagated by grafting on the common orange.

3172 *Gonophora* is a genus of pretty twining annual plants, with beautiful reddish flowers They require the treatment of *Ibasa* or other tender annuals

3173 *Microspérma bartonioides* only requires to be treated like other tender annuals, by being raised on a hot-bed, and afterwards planted out in the open border.

Stigmas of disk florets shell-shaped. Achenia cylindrically tetragonal, villous. Pappus double: outer short, paleaceous, inner setose, long, and scabrous

3182. 1746*c* *Machæranthèra.* Heads radiate. Ligulæ female or neuter, linear, 3-nerved. Involucrum of many series, imbricate Scales green with pale edges, spreading at top Receptacle naked, alveolate, or fringed Stigmas of the disk florets elongated at top, sterile Anthers longer than corolla, mutic at base, and terminated by a cultriform appendage Achenia compressed, hairy Pappus pilose, equal

3186 1748*a* *Espaletia* Heads many-flowered, monœcious Ray florets numerous, Disk florets bisexual, or male only from abortion Involucrum campanulate, imbricate, of many leaves Receptacle flattish, paleaceous Paleæ membranous Anthers exserted. Styles of ray florets bifid, slender, those of the disk florets simple Achenia obovate, subangular, naked

3187 1749*a* *Swammerdàmia* Heads many-flowered Ray florets few, tridentate Scales of involucrum imbricate linear-oblong, obtuse, yellow, rather scabrous Receptacle narrow, naked. Anthers of the disk florets tailed Styles bifid, of the ray florets exserted; branches of those of the disk florets deflexed, both capitellate Achenia nearly terete Pappus one series, hairy; the bristles rather clavate

3188. 1752*a*. *Schæ'ma* Heads many-flowered Florets all tubular, few in the circumference hermaphrodite, fertile, the rest central, male, sterile, with abortive styles Involucrum cylindrical, of many series of scarious scales outer scales shortest without any appendage, but the inner ones are furnished with a petaloid radiating appendage at top Receptacle without paleæ, rather convex, alveolate Corollas slender, 5-toothed. Styles in hermaphrodite florets bifid, swollen at base; in the male florets simple Fertile achenia obovate, beakless, silky: Sterile ones filiform nearly naked pilose at base Pappus all similar, in one series, setose Setæ serrated or subplumose

3189 1754*c* *Burrièlia* Heads many flowered Ray florets ligulate, female, obovate, Disk ones tubular, 5-cleft hermaphrodite, or sterile from abortion Involucrum spreadingly campanulate Scales oval acuminate, a little longer than the disk, in 1 or 2 series, equal. Receptacle without paleæ Lobes of disk florets bearded outside Achenia of the disk tetragonal, with 3—4-leaved pappus, and those of the ray obcompressed, bearing long 2—3-awned pappus

3190 1754*d* *Callichròa.* Heads many-flowered. Scales of involucrum about 20, in two series, the outer series

History, Use, Propagation, Culture,

3178. *Mulgèdium macrorhizon* grows well in a mixture of loam, peat, and sand, but should only be planted in very dry situations, as the large fleshy roots are often destroyed by moisture in winter It is an excellent plant for decorating rockwork among autumnal flowers.

covering the achenia of the female florets. Ray florets ligulate. Achenia fusiform, compressed, truncate those of the hermaphrodite florets downy, crowned by pappus, those of the female florets naked and glabrous Bristles of pappus numerous, in one series, serrulately scabrous persistent Receptacle flat, downy, scaly on the margins

3191 1754e *Myriáctis* Heads many-flowered Ray florets in 2—3 series, ligulate, entire Receptacle naked. Scales of involucrum in 2—3 series, linear, acute. Achenia compressed, flat, naked, glabrous, beakless, usually glandulíferous at apex

3192 1754f *Hymenóxys* Heads many-flowered Scales of involucrum in 2 series, rigid, adpressed; inner ones longest Receptacle conical, alveolate from paleæ, and furnished with small glands Styles truncate, bearded Achenia uniform, turbinate, villous Pappus paleaceous Paleæ 5—8, unequal, membranous, oval-lanceolate, acuminate erect

3193 1754g *Gynóxys* Heads many-flowered. Ray florets in one series ligulate, female; disk ones tubular, 5-toothed, hermaphrodite Involucrum in one series, with a few bracts at its base Receptacle flat, alveolate Styles of hermaphrodite florets drawn out into a hispid acute cone Achenia beakless, wingless terete Pappus uniform, pilose, in many series

3194 1754h *Brachýcome* Heads many-flowered. Receptacle subconical, subalveolate, without paleæ Involucrum campanulate of a few series of scales Scales membranous on the margins Achenia compressed laterally, beakless Pappus subsetiform, very short.

Order 3 FRUSTRANEA. Florets of the disk fertile, of the ray sterile

3195 1800b *Echináceа* Heads many-flowered. Ray florets neuter, long, ligulate, in one series, disk ones hermaphrodite, 5-cleft, with scarcely any tube Scales of involucrum in 3 series, lanceolate, ciliated Receptacle ovate, paleaceous Paleæ stiff, cartilaginous at top, exceeding the disk florets Filaments rising from the base of corollas. Branches of stigma tipped by a semilanceolate appendage Achenia tetragonal, obpyramidal, thick, crowned by irregularly jagged deciduous pappus.

ÆQUALIS.

20084 Glab, Root thick, Stems prostrate, Lvs stem-clasping pin pinnatifid sinuated or entire, Segms roundish toothd, Heads pedicellate subcorymb, Involucel twice shorter than involucrum, Scales of invol blackish when dry

20085 Stem simp corymb at top hairy, Lvs persistent obl. acute, Petioles short shaggy winged, Cauline leaves stem-clasping ovate acum with small teeth in middle but entire at ends hairy, Pedunes and invol. setose

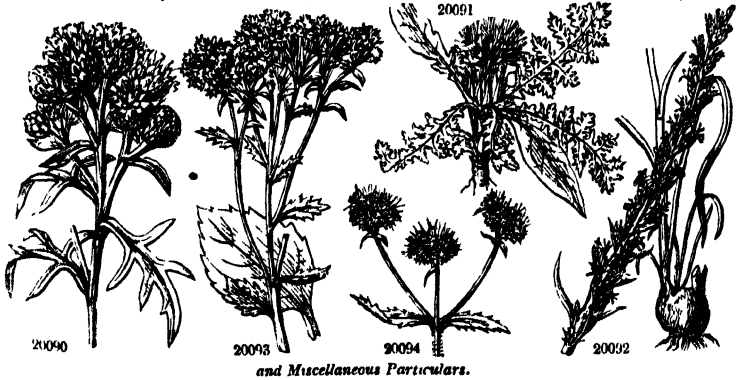
[thickish scaly, Invol farinosely downy, Root thick

20086 Glab, Stems solid leafy, Lvs oblong toothed shining fleshy coriac, lower ones tapering to the base, Pedunes
20087 Leaves runcinate toothed or lyrate-runcinate, Cauline lvs sagittate entire or deeply toothed at base, Heads erect, Involucrum and peduncles hispid, Outer scales of involucrum lanceolate acuminate

20088 Leaves bipinnatifid with linear segments clothed with a few scattered hairs, Heads on long peduncles, Scales of involucrum keeled, Receptacle naked, Ray flowers usually three

20089 Stem herbaceous downy corymbose at top, Leaves pinnate lobed, Lobes ending each in a spiny mucrone, Root fleshy

20090 Lvs scabrous pinnatifid, segments lin.-acute a little toothed, cauline leaves decurrent, upper ones undivided, Heads globose corymbose, Outer scales of invol rather tomentose lanc acum, middle and inner ones ending in a scarious coloured jagged erect appendage



20091 Leaves pinnate, Lobes pinnatifid or coarsely toothed, Heads sessile

[bracts loosely spicate, Involucrum about 6-flowered

20092 Root tuberous, Stems simple, Lvs remote dotted acum. ciliated at base, Heads in the axils of upper leaves or

[much larger ovate acute 3-nerved coarsely serrated, Invol usually 5-flowered, Pappus crown-formed toothd

20093 Erect downy, Branches corymbose, Lvs opposite sessile cuneate at base lanc usually quite entire, lower ones
20094 Smoothish, Lvs ovate or ovate-lanc 3-nerved coarsely and bluntly serrated, Corymbs densely capitate, Involclothed with clammy down, Awns of pappus three, two of which are subulate and the third very small

and Miscellaneous Particulars.

3174 *Achyróphorus* requires the same treatment and culture as other hardy annuals.
3175 *Rhaponticum.* Cultivated and treated like ordinary perennial plants.

History, Use, Propagation, Culture,

3176. *Cerádia furcàta* is very nearly allied to *Kleinia*, and the fleshy-stemmed kinds of *Cacàlia* It is said it yields a kind of gum-resin similar to Olibanum It requires the treatment of other greenhouse succulents

3177. *Barnadézia rósea* is a spiny shrub with simple leaves and heads of rose-coloured flowers similar to those of *Mutisia*. It requires a warm greenhouse, giving plenty of water in summer but sparingly in winter. Cuttings will strike root in the usual manner

3178. *Stiffia chrysántha* This is a beautiful shrub when in blossom, with its simple leaves and heads of orange-coloured flowers. Cultivated and treated like other stove plants, cuttings will strike root in the ordinary way

3179. *Hebeclínium iánthinum* is similar to *Agératum*, and answers well if treated like the species of that genus

3180. *Chabræ'a runcinata* is a very pretty annual and may be grown in the open border. It is generally grown in pots like other tender annuals.

20095 Branches fleshy horned forked leafy at top, Lvs fascicled spatulate obtuse veinless glabrous, Peduncles solitary naked a little longer than leaves, Leaflets of invol. ovate with membranous edges

20096 Heads solitary ovate cylindrical downy sessile, Florets bilabiate, one lip oblong emarginate villous, the other filiform, Filaments free, Hairs on receptacle twisted, Pappus stiff plumose

20097 Leaves broad-lanceolate, Flowers in heads indefinite

20098 Clothed with rusty down, Lvs large on long stalks rhomb-ovate cuneated at base quite entire scabrous above and hoary and downy beneath, Corymbs terminal compound many-headed, Achenia angular glabrous, Scales of invol. without appendages

20099 Beset with pilose glands, Cauline leaves pinnatifid white beneath, Lobes remotish oblong acute entire or somewhat pinnatifid, Heads on long peduncles solitary, Invol. hemispheric with lanc glandular scales, Achenia silky villous

SUPERFLUA.

[spatulate green downy narrowed into petiole at base and a little stem-clasping

20100 Stems erect scabrous, Heads large solitary terminal, Scales of invol white connivng ovate mucronate, Lvs obl.

[base green on both surf., Heads white rose-col outside, Inner sc of invol radiat., Recep naked, Pap scaly

20101 Ascend or erect scab, Branl-headed, Lvs lanc-obt., lower spatul obt entire narr into petiols stem-clasp at

20102 Clothed with hoary tomentum, Leaves long linear acute attenuated at base, Cauline ones remote and smaller, Stem simple one-headed

20103 Branches numerous slender covered with white tomentum, Lvs subulate erect imbricate, Peduncles scaly 1-flowered

[sessile ovate-lanc acum, Ligula linear, Invol glandular squarrose

20104 Stems erect corymbose downy, Leaves glabrous shining, Radical ones spatulate on long petioles, Cauline ones

[late, Pedunc axillary corymbosely panicled Pedicels bracteate, Ray florets about sixty

20105 Covered with cobwebbed down, Lvs crowded at tops of branches cylindrical flat at top and often dilatedly spatu-

[invol ovate-lin apiculate, Ray 20-flowered

20106 Beset with rusty down, Lvs lanc on short petioles denticulate downy, Flowers corymbosely panicled, Scales of

20107 Erect glab branchd, Lvs lanc acum spinosely dentic, radical larger on longer petis, cauline sessile, Corymbs large of many heads leafy, Pedunc and peds downy, Lflts of invol lin acum subsquar, Achenia scabrous

20108 Villously tomentose, Stems simple 1 headed, Leaves ovate denticulate Lower cauline leaves with a winged petiole which is auricled at base and stem-clasping, Achenia 4-cornered

20109 Lvs ligulate obscurely toothed obtuse half stem-clasping broader, Ligulæ thrice as long as involucrum

[Invol glutin., Scales of invol ending in long subul points squar, Ray flrts twice as long as disk ones

20110 Stem tall simp corymb at top, Lvs stem clasp at base coarsely tthd taper to point from base, Branchs 1-headed,

20111 Suffruticose clammy glab, Lvs oblong narrower at base toothd, Heads solitary pedunculate, Invol subsquarrose very clammy, Receptacle flat

[beneath, Heads densely panicled, Invol villous

20112 Branchs angular rather toment, Lvs alternate petiolate coriaceous obl acute toothd glab above and tomentose

20113 Lvs alternate on short petioles ovate-obl denticately repand bluntish green and scabrous above clothed with yellow silky tomentum beneath as are the branchlets, Pedunes axillary 1-headed twice as long as leaves

20114 Clothed with white tomentum, Lvs elliptic-lanc on short petioles sinuately toothd glabrous above, Peduncles on short branchlets nearly terminal solitary or subcorymbose bracteolate, Achenia tubercularly dotted

20115 Whole plant covered with felt except on the upper sides of the leaves which is of a shining green, Heads large solitary axillary on long peduncles Leaves oblong entire

and Miscellaneous Articulates

3181 *Helipterum* requires the same treatment as the Cape species of *Helichrysum*

3182 *Monoldpia major* is a rampant plant with dark green foliage growing in our gardens under the name of *Helenium Douglasii* It flowers in great perfection during the summer months, which renders it worthy of a place in the garden The plant is of easy culture

20119 *Grindelia grandiflora* comes nearest to *G. inuloides*, and will grow well in the open border in summer, where it makes a showy appearance

3183 *Eurybia* is a genus of Australian shrubs separated from *Aster*. They only require the treatment and culture of ordinary greenhouse shrubs

3184 *Olearia* is similar to *Eurybia*, and the species require the same culture and treatment.

20114 20116 20122 20119

History, Use, Propagation, Culture,

3185. *Machæranthèra tanacetifòlia* is a pretty half-shrubby plant with ascending stems and purple flowers resembling those of some species of *A'ster* It will flourish in the open air during summer. It may either be increased by cuttings or by seed, the latter method is the best, as the plant is said to be a biennial.

3186. *Espalèsia argéntea* is a pretty plant when in blossom. A light sandy peat soil suits it best. It should be kept in an airy part of a greenhouse

3187. *Swammerdàmia* requires the treatment and culture of any ordinary greenhouse plant

3188. *Schœ'nia oppositifòlia* comes very near to *Helichrysum*, is equal in beauty to *Rhodánthe Manglesii*, and should be treated in the same manner. The ray and scales of involucrum are rose colour, and the centre yellow

3189. *Burrièlia grácilis* is nearly allied to *Lasthenia*, but is readily distinguished from it by the different structure of the involucrum. The present plant is often cultivated in our gardens under the name of *Lasthènia californica*

20116 Downy, Leaves alternate pinnatifid, Heads solitary, Ligulæ purple

[corymbose bracteate, Lvs long-lanc. with oblique nerves, Rays of heads hardly exceeding the involucrum
20117 Clothed with silky tomentum, Stem short thick leafy at length florliferous elongated nearly naked paniculately
20118 Clothed with rufescent wool, Radical leaves lanceolate lined beneath, Corymbs loose simple, Ligulæ about 60

[petioles, Heads in panicles, Bristles of pappus like the antennæ of insects
20119 Branches angular, Leaves alternate obovate cuneate obtuse entire 1-nerved coriaceous whitish beneath on short
20120 Lvs small roundish dull green above white beneath, Branches straggling bearing small clusters of white flowers

[radiating red, Bristles of Pappus stiffish serrated
20121 Stem hairy canescent, Leaves opposite sessile lanceolate acute, Corymbs terminal, Scales of involucrum long

20122 Ligulæ and involucra 8—10–12, Leaves opposite lanceolate, Heads terminating the naked branches

20124 Very like *Burrièlia* in habit, Leaves alternate sessile, Heads solitary pedunculate, Ray florets large cuneate

20124 Stem erect hairy from articulated pili and bristles, Leaves petiolate membranous coarsely-toothed, Scales of invol 2-3 series linear-oblong ciliately fringed, Achænia glandular

20125 Plant erect slender, Lvs pinnatifid glabrous, Peduncles filiform 1-headed, Scales of pappus 5 unequal serrated

20126 Scandent glabrous, Leaves alternate on longish petioles ovate or ovate-lanc acute rather fleshy entire, Racemes corymbose terminal, Florets of the ray few, Bracts 4—6 spreading subulate

20127 Caulescent divaricately branched, Leaves entire ciliated, lower ones obovate, upper ones lanceolate, Scales of involucrum smooth so taper-pointed as to appear awned

[exceeding the leaves downy
20128 Stems many ascending, Leaves subradical thick obovate entire attenuate at base rather downy, Scales much

[of invol obl acutish membranous at apex, Achænia subterete clavate plicate at apex Pappus almost wanting
20129 Glabrous, Stems erect branched, Lvs pinnate, Segms lin -subulate distant quite entire, Peduncs 1-headed, Scales
β Flowers white very like those of the common daisy

[ovate acute coarsely serrated, Ligulæ female, Outer leaves of involucrum linear spreading
20130 Stem quite smooth fistular, Leaves bipinnate glabrous, upper ones linear undivided, Rachis winged, Leaflets
[Rachis of leaves downy beneath, Outer involucrum 5-leaved erect
20131 Stem almost wanting scaly glabrous 1-headed, Leaves pinnate glabrous, Pinnæ serrated, upper ones decurrent
20132 Stem solid scabrous hairy much branched, Leaflets ovate deeply toothed unequal at base, Heads crowded, Peduncles slender glabrous at top
β Flowers resembling those of an *Anthémis*

[entire Paleæ bearded on back
[cronately denticulate, Corymbs simple 5 headed, Invol nearly glob with ovate scales, Ligulæ 5 - 6 nearly
20133 Hoary tomentose, Stem shrubby erect branched Lvs pinnate, Segms short imbricate approx 3-lobed, Lobes mu-
[per undiv, Cory comp fastig 30—50 hdd, Sc of invol obov obt with membr edg Lig 5—6 obov glab
20134 Stem shrub erect nrly simp white tom, Lvs nearly glab pectinately pin, Segms distant nrly sessile tripar, up-
20135 Downy, Stems erect subangular or striated simple Lvs pinnatifid rarely bipinnatifid, Rachis entire, Lbs lanc. obl deeply ser. at apex, Corymbs compound fastig Invol ov obl Ligulæ 5 obov obt hardly thd, Paleæ ac

FRUSTRANEA.

20136 Stem hispid, Radical leaves fiddle-shaped running along the petiole, Cauline leaves lanc. subserrated

20137 This is a very pretty garden hybrid

20138 Plant rather scabrous, Radical leaves fiddle-shaped subtrilobed subdentate, Cauline leaves ovate-lanceolate, Paleæ shorter than florets

and Miscellaneous Particulars.

3190 *Callichròa platyglóssa* is nearly allied to *Burrielia* and *Lasthènia*, and requires the same treatment
3191 *Myriactis Wrightii* will require protection in severe weather It should be treated like any ordinary herbaceous perennial. Vegetable mould suits it best
3192 *Hymenóxys californica* is nearly allied to *Burrielia* and *Callichròa*, and is treated in a similar manner
3193 *Grindèlia fragrans* A pretty climbing plant with a tuberous root and very fragrant yellowish flowers. It is of easy culture and may be increased by cuttings
3194 *Brachýcome iberidifolium* is a most beautiful plant, the flowers exhibiting a variety of colours, as white, lilac, and dark purple It flowers freely in the open border, and it has a very fine effect when grown in pots
3195 *Echinácea*. The species prefer a peat soil, otherwise they require the same treatment as ordinary perennial plants

Page 748. CLASS XX. — GYNANDRIA.

Order 1. MONANDRIA Stamens 1.

3196 2747*a* *Physosiphon* Sepals combined into a ventricose tube, hispid at apex Petals short fleshy, in the bottom of the tube Lip short, similar to petals Column continuous with the ovarium short, mutic Pollen masses 2, spherical. Habit of *Pleurothallis*.

3197. 1894*a* *Centranthèra*. Lateral sepals connate upper one galeate. Petals smaller, cuneiform Lip 3-lobed articulated with the column Lateral lobes small, acute middle lobe ovate-obtuse Column winged, rather membranous, jagged at top Anthers apiculated, 1-celled Pollen masses 2, cohering

3198 1894*b* *Restrephia* Sepals spreading lateral ones under the lip, all connate Petals filiform, with a triangular base. Lip free similar, biauriculate at base, or 2-horned, spreading Column short, semiterete, drawn out into a wing at apex Anther 1-celled Pollen masses 2, waxy, oblong

3199. 1897*a* *Pleurone* Lip undivided, broad, concave, having the disk crested, the margin fringed, and a free simple base Column elongated, free, attenuated at base. Sepals and petals uniform. Pollen masses waxy, with a complete dissepiment

3200 1897*b* *Earina* Sepals erect, equal, acute, membranous, keeled Petals fleshy, obtuse Lip behind continuous with the column, fleshy, cuculiate, 3-lobed, with a naked disk. Column short, terete Anther 2-celled Pollen masses 4, cohering by pairs collateral

3201. 1897*c* *Trichosma* Sepals spreading, equal lateral ones drawn out at base, and adnate to the foot of the column. Petals conform, erect Lip 3-lobed crested, cuculliate, articulated with the foot of the column Column fleshy, margimate Anther fleshy, arched 2-celled Valves vertical, with aphaceiate margins. Pollen masses 8, cohering by fours, two in each bundle smaller

3202 1908*a* *Epiphora*. Sepals free, acute Petals shorter, obovate Lip behind articulate with the base of the column, which is much drawn out at base Lip sigmoid, unguiculate, keeled, 3-lobed. Column and stigma vertical with 3 tubercles. Anther 1-celled Pollen masses 4, fixed to linear caudicula

3203 1912*a* *Mycaranthes*. Sepals conniving or spreading, equal or unequal, woolly outside lateral ones unequal at base, adnate to the foot of the column Petals smaller Lip articulate with the foot of the column, 3-lobed cuculiate, with a crested or appendiculate disk Column short, drawn out a long way at base, with a winged introflexed margin. Anther 2-celled Pollen masses 8, ovate.

3204 1900*a*. *Ponera* Sepals erect, fleshy lateral ones larger, drawn out at base, combined with the elongated foot of the column, dorsal one flat. Petals oval, free, narrowed at base. Lip cuneate, 2-lobed, ascending, arched, articulated with the base of the column, naked Column short, terete Anther membranous, depressed, 4-celled Stigma roundish, excavated, 2-lobed Pollen masses 4, adhering by pairs

3205 1907*a* *Eriopsis*. Sepals and petals almost uniform, oblong-obtuse. Lip concave, 3-lobed, lamellate in the disk, drawn out at the base, articulated with the column. Column semiterete, clavate, wingless. Anther oblong, 1-celled Pollen masses 4, unequal, fixed by pairs to two elastic threads. Gland rather membranous, square

3206 1907*b*. *Hexadesmia* Sepals connivent upper one oblong-lanceolate, lateral ones triangular, united with the column into a kind of spur. Petals oblong, about equal to the sepals Lip articulated with base of the column nearly entire, plicate. Column semiterete, shorter than petals, clavate at top. Anther 6-celled. Pollen masses 6 equal, four behind and two in front

3207 1907*c*. *Arpophyllum* Perigone spreading. Sepals connate at base. Petals much narrower Lip articulated with the drawn-out base of the column, undivided, concave, shortly spurred. Column erect Pollen masses 8, pear-shaped, glutinous

3208 1907*d*. *Otochilus*. Sepals and petals similar Lip 3-lobed lateral lobes short, clasping the column, middle lobe elongated, spreading, crestless. Column elongated, semiterete, clavate. Anther 2 celled, 2-valved. Pollen masses incumbent, granular

3209 1907*e*. *Barkèria* Sepals and petals equal, free, membranous, spreading Lip flat, quite entire, naked, pressed to the column. Column petaloid Anthers 4-celled, fleshy Pollen masses 4, connate by pairs, on as many reflexed stipulate caudiculæ Flowers large, conspicuous, drooping

3210 1907*f* *Arundina* Sepals linear-lanceolate, equal, spreading, connate a little at base Petals conform but broader. Lip convolute around the column, 3-lobed or entire, curled or lamellate in the middle Column straight, parallel with the lip, semiterete, clavate. Anther 4-celled, truncate, roundish. Pollen masses 8, equal, cohering. Stigma arched, prominent, a little lobed.

3211 2765*a* *Barlea* Flowers subglobose, nearly regular, with a short rounded snout. Lip continuous, undivided, with fleshy elevated lines in centre. Column semiterete, clavate. Pollen masses 4, inserted by pairs on a short linear caudicula Gland triangular. Terrestrial.

3212. 1911*a*. *Spathoglottis* Sepals spreading, free, equal Petals a little broader, spreading, or connivent Lip articulated with the base of the column usually saccate, tripartite, middle segment unguiculate, tuberculate at base, or crested, generally with one tooth on each side Column winged, petaloid Anther 2-celled. Pollen masses 8

3213. 1911*b*. *Schlimma*. Sepals fleshy, unequal dorsal one linear, straight, free, lateral ones large, combined into a sac at base. Petals equal to the dorsal sepal. Lip minute, with a fleshy claw, articulate with the column,

20139 Stem branched angular, Leaves hispid, Heads of Flowers with a dark centre

20140 Stem branched angular hispid, Leaves petiolate acute tapering at base reticulately veined, lower ones ovate 7-nerved crenately toothed, upper ones lanceolate scabrous obsoletely crenated, Stipules hispid on the back, Palea of receptacle pungent, Pappus very short nearly entire

20141 Glab , Lvs bipin., Lobes linear remote acute ent or lobed, Outer Scales of Involuc ov acum., Achenia rough mutic or 1—2-awned [entire, Scales of Involuc lanc ac., Achenia glab, biaristate

20142 Stem glab , Lvs petiol bipin , Lobes subapic with scab margins, Ray Florets lilac ov -lanc toothed at top or

20143 Stem downy, Leaves pinnate-parted hispid beneath with 2 pairs of lanceolate-oblong subserrated leaflets, the terminal one the largest, Outer Scales of Involucrum lanceolate acute shorter, Achenia bi-triaristate

20144 White from tomentum, Lvs broad linear nearly sessile and stem-clasping entire or a little denticulated bearded at apex, Pappus double, Outer palea linear

20145 Stem branched furrowed, Leaves sessile glabrous pinnate, Lobes linear acute entire or a little toothed, Heads globose, Outer Scales of Involucrum drawn out into an ovate pectinately ciliated scabrous appendage, middle bristle longer stiffer and shining

NECESSARIA.

20146 Annual, Lvs ov -lanc. coarsely toothed, Peduncs furnished with large setac brcts, Scales of Involucre reflex at top

---

tubercular Limb simple, membranous Column semiterete, auricled on both sides at apex Pollen masses 2, waxy; with an elongated cuneated caudicula, and a small lunate gland.

214 1911c *Arsia* Sepals and petals linear-lanceolate, conniving, uniform Lip connate with the base of the column which is often drawn out into a spur or sac, 3 lobed, flat, bilamellate in the middle. Column erect, elongated, winged Anther 6—8-celled Pollen masses 8

215 1772a *Dignathe* Flower solitary, resupinate, fleshy Sepals and petals spreading, equal Lip flat, reflexed, rather saccate at base, with two fleshy lamellæ adnate to the column Column short, acute, rather connate, semiconnate Pollen masses 2, on a linear caudicula. Gland small, oval

216 1772b *Pilumna* Ovarium 3-ribbed Sepals and petals equal, spreading, inserted obliquely Lip adnate to the column at base, nearly entire, unguiculate, convolute, mappendiculate Column clavate, terete, surrounded by a membranous toothed hood at apex Stigma vertical Pollen masses 2, cleft behind, adnate to a short caudicula and small gland

217 1902 *Ornithárium* Flowers resupinate, closed, fleshy Lateral sepals connate at base, parallel with the column, the dorsal one separate Petals conform Lip free, unguiculate, fleshy, sagittate Column semiterete, short Stigma vertical Pollen masses 2, on an obovate fleshy caudicula, with a triangular gland, and reflexed beak

218 1902a *Prominæa* Sepals spreading Lip 3-lobed middle one crested, or with many tubercles Column short semiterete Gland ovate Pollen masses 4, sessile by pairs. The rest as in *Maxillaria*

219 1902b *Scuticaria* Flowers ringent, drawn into a roundish snout in front Lip continuous, membranous, keeled, tuberculate in middle Column semiterete clavate Pollen masses 4, inserted by pairs in a short linear caudicula Gland triangular The rest as in *Maxillaria*

220 1902c *Paphinia* Flowers nearly regular, expanded, petaloid, rather drawn out into a snout Lip small, unguiculate tripartite, beset with hiform glands Column clavate, elongated, semiterete auricled at top Pollen masses 4 fixed by pairs to an elongated caudicula, which is setaceous at top. Gland minute, rather triangular Rostellum subulate The rest as in *Maxillaria*

221 1902d *Lycáste* Flowers ringent, drawn out into a short snout at base Petals usually dissimilar Lip crushed with an entire or emarginate, fleshy, transverse appendage in the middle Column elongated, semiterete, fully pilose Pollen masses 4, adnate by pairs to a narrow elongated caudicula. Gland small, roundish Rostellum subulate The rest as in *Maxillaria*

222 1902e *Colax.* Flowers subglobose, scarcely ringent drawn out in a short snout Sepals and petals nearly equal Lip unguiculate, 3-lobed, mappendiculate flattish Column rather elongated, semiterete, with a marginate androdium Anther fleshy crested Pollen masses 4, collected into globose pairs, adnate to an obovate membranous caudicula Gland none Rostellum cleft

223 1902f *Acineta.* Perianth fleshy, spreading Sepals connate at base upper one ascending Petals connate a little smaller Lip continuous with the column, very fleshy. Hypochilium oblong, concave Epichilium strongly articulated, tripartite, ascending, furnished with a fleshy appendage at base Column erect, drawn out into a broad margin on both sides. Anther crestless, 2-celled. Pollen masses 2, sulcate behind Caudicula linear. Gland lunate

224 1902g *Aganisia* Perianth spreading, equal Lateral sepals scarcely drawn out at base Lip free, movable, unguiculate Hypochilium small, concave, separated from the epichilium by a transverse glandular crest Column short semiterete, marginate, furnished with an active spreading arm on each side Anther crestless. Rostellum bifid Pollen masses 4, combined by pairs to a linear caudicula Gland small, oval

225 1902h *Houlletia* Perianth spreading Sepals nearly free Petals a little smaller, unguiculate Lip connate with the base of the column Column erect, arched, clavate, semiterete, a little shorter than lip Anther lunular, depressed Pollen masses 2, cleft behind, fixed to a linear-lanceolate elongated caudicula. Gland small

226 2776a *Stenorhynchus* Flowers ringent, closed, long-horned Sepals much drawn out at base, and connate Petals conform Lip on a long claw, 3-lobed, with a callous disk. Pollen masses 4, connate by unequal pairs, semi-pilose Caudiculæ 2 Glands 2, oval

227 2776a *Helcia* Sepals and petals coriaceous, conform, spreading Lip spreading, membranous, flat, connected in middle, furnished with a fleshy, elevated, truncate appendage, which is foveate in middle, on both sides Column free, terete Clinandrium erect, fringed all round Anther fleshy, 2 celled, drawn out into an incurved pilea or cap Pollen masses 2, excavated behind Caudicula cuneated. Gland small, oval

228 2776b *Trichoglottis* Perianth spreading Sepals equal lateral ones under the lip Petals a little smaller Lip connate with the edges of the column, saccate, horned on the margins on both sides, with a fleshy undivided Column erect, 1-horned at base. Anther 2-celled Pollen masses 2, globose, 2-lobed, with a linear caudicula and small hooked or peltate gland.

229 2776c *Waitesia* Sepals and petals equal, spreading lateral ones rather oblique at base. Lip saddle-shaped, parallel with the column villous in middle, bidentate at base Column short, truncate, semi-cylindrical Anther 2-celled Pollen masses 2, globose, excavated on back, with two linear diverging caudiculæ connected by 2 small glands

230 2782c *Dendrochilum.* Perianth spreading Sepals and petals similar. Lip 3-lobed, or auricled at base, bicarinate Appendages of column subulate

231 2784d *Cleisomeria.* Sepals keeled. Lip didymous. Lateral lobes erect bifid: middle one concave bisected at top Caudicula cuneate, bifid, elongated.

3232. 2785*a*. *Scelochilus* Perianth conniving Sepals narrow, navicular, keeled, cohering at base · lateral one under the lip and connate in one, and drawn out into a blunt spur at base Petals broader, free. Lip entire continuous above the base of the column, callous, and downy on disk, bicostate, bidentate in front, emarginate at apex Column semiterete, naked, shorter than lip. Anther 2-celled. Pollen masses 2, spherical, solid with linear caudicula on a small obovate gland.

3233 2786*a* *Clowesia* Flowers subglobose, spreading Petals nearly equal · lateral ones a little oblique, drawn out in a short snout, connate at base Petals conform, but broader and fringed Lip concave, fleshy, continuous with the column, not articulated, obsoletely 3-lobed, with a glandular jagged fringe on the margin, and a smooth disk. Column semiterete, clavate, obtuse, horned. Cinandrium tall, fleshy, serrated. Stigma transverse. Pollen masses 2, linear, furrowed on back Caudicula membranous.

3234 2790*a*. *Lacæna* Perianth fleshy, spreading, nearly equal, rather connate at base. Petals conform but smaller Lip articulated with column in middle Hypochilum unguiculate, cuneate, 2-lobed, pulvinate at top Epichilum entire. Column erect, semiterete. Pollen masses 2, cleft behind. Caudicula setaceous Gland minute.

3235 2790*b* *Odontoglóssum* Lateral sepals spreading, free Lip flat, unguiculate, ascending, having the limb reflexed, toothed, narrowed at top, concave at base, and furnished with a bilamellate rarely fringed crest, which is generally bidentate in front Column elongated, auricled, or wingless at apex.

3236 2793*a* *Ansellia* Sepals oblong, spreading, fleshy, free Petals conform, straight, broader. Lip sessile, spreading, 3-lobed, bilamellate Middle lobe smaller and warted. Column elongated, marginate, auricled on both sides Anther 2-celled Pollen masses 4, sessile, contiguous at base, the 2 dorsal ones much the smallest Gland narrow, acuminated at both ends

3237 2795*b* *Bromheádia* Perianth cylindrically conniving Segments all linear-oblong, curved, channeled, bluntish Lip cucullate, 3-lobed, nearly parallel with the column middle segment retuse, yellowish, glandular in disk, lateral segments ovate, shorter, violaceous. Column inarticulate at base, broadly winged, obtuse fleshy Anther 2-celled, dehiscing lengthwise Pollen masses 2, reniform, excavated behind, sessile on a broad triangular gland

3238 2807*a* *Leochilus* Sepals and petals spreading, lateral, connate Lip undivided, tuberculate, or laminate at base, and furnished with melliferous hollow Column short, terete, free Anther broader than column, 1-celled. Pollen masses 2, with a narrow elongated caudicula, on an ovate minute gland

3239 1897*a* *Acianthera* Sepals conniving lateral ones connate, upper ones galeate Petals smaller, wedge-shaped, dilated at apex Lip articulated with the column, 3-lobed Lateral lobes acute middle lobe flat, obtuse Column winged, membranous, jagged at top. Anther apiculated, 1-celled Pollen masses 2, cohering at base

3240 1916*a*. *Telipogon*. Perigone spreading Sepals narrow, acute Petals broad-ovate. Lip similar, but larger Column terete, pilose. Clinandrium furnished with subulate hooked processes behind. Anther 1-celled, 2-valved. Pollen masses 4

3241 2417*a* *Arthynchium*. Sepals and petals flat, free, equal at base Lip sessile, spurred, undivided Column short terete, hardly drawn out at base Stigma circular Anther roundish, 2-celled, membranous, depressed. Pollen masses 4, by equal pairs, with a subulate caudicula, and a triangular, nearly free, membranous gland. Rostellum truncate.

3242 2817*b* *Malachadenia* Flowers resupinate, lateral Sepals connate at base, reflexed, and free at top, forming a galea dorsal sepal cordate-acuminate Petals small, scale-formed, roundish. Lip fleshy, with revolute edges, mucronate at base, articulated with the foot of the column, and adnate to the galeate lateral sepals Column with 2 tendrils or horns in front, stretched out at base. Stigma linear-oblong Anther 2-celled, deciduous. Pollen masses 2, waxy, sessile, with a soft naked gland

3243 1915*b* *Acropera* Perigone spreading, nearly equal Sepals and petals similar Lip connate with the base of the column, with a spreading, cordate, crested limb Column erect, furnished on both sides with 2 horns, which are glandular at top. Anther 2-celled hidden by the cucullate clinandrium. Pollen masses 2, fusiform; with a filiform caudicula, and a small subglobose gland

3244 1923*a* *Limatodes*. Perianth erectly spreading Sepals and petals nearly equal, free Lip undivided, spurred at base, tumid inside Column erect, semiterete Anther 2-celled Cells 4-valved. Pollen masses 8, obovate, with a short filiform caudicula and a minute gland.

3245 1874*a* *Sarcoglottis*. This genus differs from *Spiranthes*, from which it has been separated by Presl, in the sepals being saccate at base, the upper one arched

3246 1861*a* *Peristylus* Perianth campanulate Sepals and petals equal, similar Lip entire, or tripartite, with a short bag-formed spur. Anther erect. Cells diverging Beak flat, adnate to the anther. Pollen masses on 2 subulated naked glands

3247 2838*a* *Physurus* Perianth subringent. Sepals linear-lanceolate, spreading, upper one combined with the petals into an arch, which is tridentate at apex. Lip pendulous, narrowed at base, and drawn out into a short 2-lobed spur at base Anther acute, 2-celled

3248 2838*b*. *Chenóstylis* Perianth bilabiate Sepals connate at base into a ventricose tube Petals free, equal Lip much larger, unguiculate, bicallous inside, with a dilated, deeply spreading, 2-lobed limb Column short, long-beaked Beak emarginate Anther intra-marginal, 2-celled Cells 2-celled Pollen masses 2, 2 lobed, with a common caudicula.

MONANDRIA.

[acute, Lip linear obtuse fleshy with one furrow above

20147 Leaf spatulate marginate retuse shorter than racemes, Bracts small, Sepals acuminated, Petals linear-lanceolate

20148 Leaf obl cordate keeled subcord at base, Petiole chan Seps linear equal, lateral ones keeled, Petals linear obovate minutely serrated glabrous, Lip obovate fleshy with an inflexed tooth on both sides near the base

20149 Stems 2-edged, Leaf oblong cochleate fleshy prolifrous double the length of the raceme Bracts cuneate cuspidate cucullate shorter than pedics, Seps con, lat ones semicon, Petals and lip same form, Clinand. tooth d

20150 Leaf cordate obl sheathing the stem shorter than race, Bracts ov, Seps cordate obl downy, lateral ones semicon, Petals short acute, Lip obl. hollow in middle bilamellate [late ciliated, Lip ov emarg unguic

20151 Lvs fleshy oval ac, Spike solit pend longer than lvs, Seps connivng ac, lateral ones connate, Petals subu-

20152 Leaf obov emarg much longer than stem and much shorter than loose erect raceme, Bracts small membran, Seps costate obl ac, lateral ones separate at apex, Petals lanc u, Lip linear obt fleshy 1-furr above

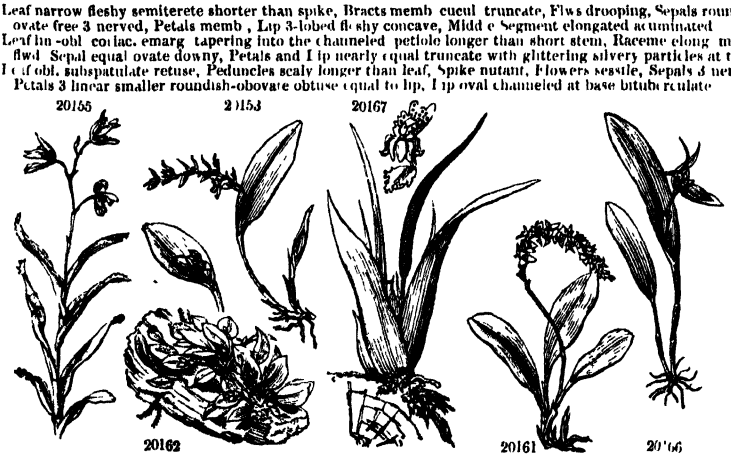
20153 Leaf obl.-lanc emarg cordate longer than stem, Racs nutant many-flwd shorter than leaf, Seps lin.-lanc. acum lateral ones conn, Petals conform much smaller serr, Lip tongue-shpd serrul with marg thick waited

20154 Leaf long lanceolate arched, Sheath close to the stem, Lip 3-lobed unguiculate, Lateral Segments short subfalcate acute, middle one obovate cuneated denticulated cleft, Lamellæ 2 fleshy

20155 Stem leafy, Leaves linear-lanceolate distich denticulately serrated, Racemes terminal few-flowered

[keeled ciliated lin bifid, Petals elliptobt cili at top, Lip obov obt, cili 3-nerved, Top of Column ciliate

20156 Leaf narrow lanceolate obtuse about equal to the stem, Spikes secund fasciculed not half so long as lvs, Sepals



20157 Leaf roundish-ovate emarg shorter than stem, Flowers fasciculed, Sepals linear obtuse glabrous, lower one bipartite, Petals elliptic ac ser, Lip ov beaked concave at base cili at top obt, Top of Column serrated

20158 Leaf coriaceous wavy emarginate narrow and channeled at base longer than stem, Spikes short fasciculed Flws glab, Seps and pets lin. acum, Lip lin abruptly ac a little constricted in mid, Col. cucul winged subdentate

20159 Leaf narrow fleshy semiterete shorter than spike, Bracts membcucul truncate, Flws drooping, Sepals roundish ovate free 3 nerved, Petals memb, Lip 3-lobed fleshy concave, Middle Segment elongated acuminated

20160 Leaf lin-obl cordac. emarg tapering into the channeled petiole longer than short stem, Raceme elong many-flwd Sepal equal ovate downy, Petals and Lip nearly equal truncate with glittering silvery particles at top

20161 Leaf obl. subspatulate retuse, Peduncles scaly longer than leaf, Spike nutant, Flowers sessile, Sepals 3 nerved, Petals 3 linear smaller roundish-obovate obtuse equal to lip, Lip oval channeled at base bituberculate

History, Use, Propagation, Culture,

3196. *Physosiphon* Curious little epiphytes, with the habit of *Stelis*, and differ principally from that genus in the sepals being combined into a tube

3197. *Centranthèra* is a small epiphyte, with purple flowers

3198. *Restrèphia* is an epiphyte, with recurved flowers, white petals spotted with red, and a yellow lip.

20162 Leaf ovate tridentate, Peduncles aggregate shorter than leaf, Sepals ovate glandularly ciliated as also the lip Lateral lobes of Lip wing-formed spreading, middle lobe 3-lobed pressed to the column

20163 Leaf oblong narrow obtuse or emarginate shorter than twin racemes, Tube of Perianth triquetrous with winged angles, Middle lobe of Lip serrated scabrous

20164 This differs from *P carinàtus* in the middle lobe of lip being entire and not broken by callous sharp teeth on the surface

20165 Leaf ovate obtuse glaucous dotted with brown, Sepals very villous outside dotted with brown inside, Lip purple, Racemes radical drooping

20166 Petals white spotted with red filiform recurved with a broad ciliated base, Lip dull yellow ciliated convex, the lateral segments small and bluntish, Leaf solitary, Sepals white

20167 Lvs broad ensiform, Raceme long 2-edged at base many-flowered, Flowers verticillate, Bracts fringed, Sepals reflexed, Petals erose, Lip obtuse fringed concave at base obsoletely lobed [side, Lip cordate truncate

20168 Spike dense cylindric, Bracts channeled a little cil, Flws small, Seps and pets reflexed fimbriately downy in-

20169 Caulesc, Lvs equitant subfalc acute, Spike long pendul loose-flwd, Bracts linear convex jagged Pedics hair glandul pilose, Seps ovate erect acute, Petals conform smaller, Lip obl conc nar. retuse towards apex

20170 Pseudo bulb ovate sheathed 2-lvd, Lvs broad-ovate membranous Sheaths elongated involving angular scape at base, Flws corymb, Seps oblong deflexed, front ones coadunate at base, Pets lanc. lin. revol, Lip orbic. obtuse

20171 Leaves ovate-lanceolate, Flowers party-coloured

[liform, Petals linear-oblong, Lip ovate-lanceolate channeled recurved

20172 Pseudo-bulb ovate oblong 2-leaved, Leaves ensiform, Scape 2-edged, Rac dense erect cylindrical, Sepals li-

20173 Lvs 6 obl -ovate acute plicate petiol, Spike erect many-flowered, Scape winged scaly purple, Wings 6 membr, Seps and pets lin, Lip muc dark pur [green, Seps spread obl with rev margs, Ov and pets lin filif

20174 Lvs 2—3 rndsh-ov ac petio plic obl at base cucul shrtr than many-flwd spike, Pedunc ang, Lip rndsh rflxd

20175 Lvs oblong lanceolate acuminate wavy plicate, Bracts foliaceous reflexed, Lip obcordate bituberculate

20176 Lvs many oblong-acute plicate shorter than few-flwd raceme, Scape angular, Lip cuneate flat 2-lobed bituberculate at base, Petals and upper sepal linear spreading, lateral sepals roundish ovate shorter than lip

20177 Pseudo-bulb ovate, Lvs ensiform plicate, Raceme long many-flowered, Bracts linear-lanceolate acute squarrose, Lip lanceolate bisaccate at base

20178 Tufted, Rhizoma short, Pseudo-bulb tetrag ovate rugose 1—2-leaved, Leaves obl undul acum 3-nerved, Ra-

20179 cemes short sec, Brcts cucul obt persist, Seps ov, Pets lin, Lip obl ac conc at base refracted at top Spike short flexuous, Bracts persistent, Column large somewhat petaloid antheriferous on the face in the middle, Lip concave hastate at top 2-lobed

20180 Spike pendulous distich imbricate, Bracts oblong concave apiculated, Lip 3-lobed

20181 Pseudo-bulb ovate tapering to the base 2-leaved, Leaves narrow, Racemes drooping, Flws small dull reddish

20182 Pseudo-bulb subcate ovate obtuse fasciculed, Leaf oblong coriaceous plicate, Racemes distich pendulous imbricate

[with horny scales, Brcts obl divar persist, Pets obl -lanc wavy, Lip 3-lbd with a triple interrupted crest

20183 Pseudo-bulb obl seated on a thick scaly rhizoma, Lvs lin lanc, Racs radical erect shorter than lvs sheathed

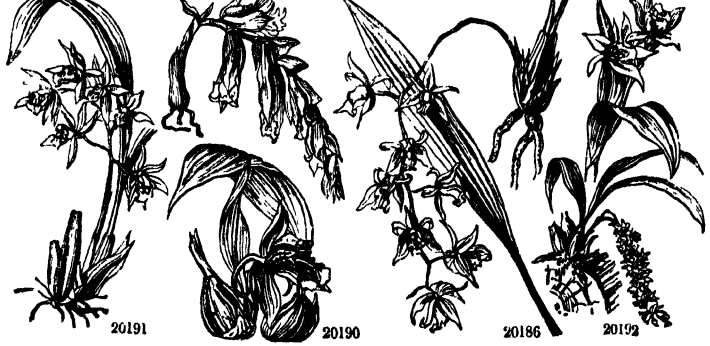
20184 Pseudo bulb ovate tufted clothed with shining scales, Leaves lanc acum narrowed into petiole, Raceme strict, Bracts decid, Seps and pets obl -lanc., Middle lobe of Lip ov, Disk with 3 lamel. lines, Col obsoltly 3-lbd

20185 Racemes pendulous dense many-flowered downy, Bracts roundish ovate concave dry, Flowers large resupinate, Sepals lanceol keeled, Pets narrower, Lip cucullate 3-lobed, Lobes obtuse, mid lobe crested, Disk wa ted

20186 Pseudo-bulb oblong angular covd by coriac pointed withered scales Lvs oblong lanceol. on long petioles, Racs flex drooping, Bracts decid, Petals lin lanc, Lip ov 3 lobed with 3 elev. flex lines, Col tthd at apex

20187 Pseudo-bulb ov, Lvs twin lanc 5-nerved longer than few-flwd rac, Scape naked at base, Bracts convolute, Pe-

20188 Pseudo-bulb ovate-oblong, Leaves 5-nerved [tals lin -lanceol., Lip 3-lobed, Lamellæ 3 curled continuous



20189 Pseudo-bulb oval narrow angular, Leaves linear-lanceolate tricostate, Raceme pendulous, Bracts ovate cucullate, Seps and pets nearly eq, Lip obl, Lat lobes rndsh obsolete, Middle lobe obt with 4 papil crested veins

20190 Pseudo-bulb ovate ribbed 1-leaved, Leaf oblong-lanceolate 5—7-nerved, Peduncles 1-flowered scaly, Sepals oblong, Petals linear Lip 3-lobed, Lateral segments denticulate, middle one rounded 2-lobed

20191 Pseudo-bulb obl tetrag at top, Lvs lanc 5-nrvd, Rac few-flwd, Lip 3-lobed downy inside with rounded lobes

20192 Pseudo-bulbs large, Leaves large 2 feet long, Scape 30 inches, Flowers numerous close set, Sepals and column cream-coloured, Lip slightly 3-lobed cream-coloured marked with orange

20193 Pseudo-bulb elongated, Leaves membranous obovate-lanceolate 5-nerved, Racemes recurved, Bracts broad-ovate obtuse cucullate Flowers closed trisaccate at base, Petals linear, Lip 3-lobed

and Miscellaneous Particulars.

20180 ***Pholidòta conchoidea*** This species comes very near *P. imbricàta*, but the flowers are almost twice as large, and the keels of the lateral sepals are so deep and concave as to give the flowers the appearance of the inside of a bivalve shell

History, Use, Propagation, Culture,

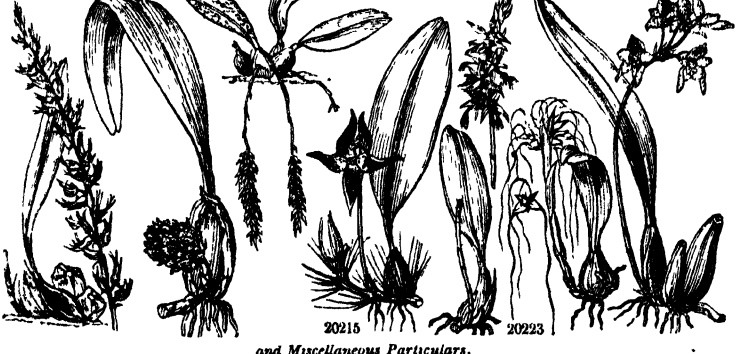
3199 *Pleione* is a genus of terrestrial Alpine *Orchideæ*. Rich mould, mixed with pebbles or small stones covered with moss and kept moderately moist, in beds raised with bricks, suits all the species well *P. Wallichiana* covers the oak trees in its native place

3200. *Earina suaveolens* is an epiphyte, and a native of New Zealand on trees.

20194 The blossom of this species is larger than any of the others
20195 Caudex creeping scaly, Pseudo-bulbs small obl compressed smooth, Leaves 2 broad-lanc , Rac term. bract. 4—5-flwd, Seps ov.-oblong, Petals oval smaller, Lip spat. with a bilamel disk, Mid lobe cil fringed orbic

20196 Pseudo-bulb flask-shaped clouded, Bract hooded acute tapering to base, Sepals and petals linear-lanceolate acuminate, Lip rounded emarginate with 5 crested lines
20197 Pseudo-bulb all same colour short thick rounded narrowed at base, Bract short inflated roundish hooded, Sepals and petals ovate acute, Lip rounded emarginate with 7 crested lines
20198 Pseudo-bulb ovate, Sepals and petals striated, Lip 2-coloured spotted with 5 crested lines

20199 Pseudo-bulb roundish, Lip crested by 5 lines, Perianth pink Leaves elliptic-oblong acute nerved
20200 Pseudo-bulb ampullaceous, Sheath tubercul , Pedunc radic sheathed at base, Lip 3-lobed sac at base, middle lobe denticulated curled trunc. at top apiculated with 4—5 incomplete dentic crests in disk, Col tthd at top



20201 Spike oblong dense rather compound at base, Lip transverse rhomboid bicallous towards the base obsoletely 3-lobed, Middle segment roundish wavy emarginate, Leaves distich

20202 Stem 2-leaved covered with warted scales, Leaves rather fleshy petiolate, Spikes terminal spathaceous at base

[lose, upper one recurved obt callous, lateral ones refracted, Petals linear, Lip ovate corrugated
20203 Pseudo-bulb ovate trigonal, Leaves oblong-lanceolate emarginate, Rachis linear-oblong crenated, Sepals pu-
20204 Rachis large lanceolate, Flowers covered with black hairs, Seps acute, upper one smooth, lateral ones downy inside, Petals small acute glabrous, Lip ovate fleshy wrinkled
20205 Pseudo-bulb tufted rather tetrag 2-lvd, Lvs oval emarg biplic , Rachis comp. falc cren , Upper segs of Perianth obt callous on both sides at apex, outer lat ones reflexed bident , inner ones or pets smaller subulate obtuse

20206 Pseudo-bulb lenticular 1-leaved shorter than erect racemes, Bracts ovate stem-clasping, Sepals linear-lanceolate acuminated, Petals subulate shorter than column, Lip linear-lanceolate acuminate villous bearded at top
20207 Ps -b ov -obt 4-wgd 2-lvd, Lvs nar obl fleshy, Seps radic pend mch shrtr than tusif many-flo rachis, I ls fleshy bibract outside, Seps ov.-obt., lat ones con at base shorter than ov pets Lip triq ac chan ser at back
20208 Pseudo-bulb ovate tetrag 1-lvd, Lf lanc shorter than erect many-flwd spike, Brcts membranous lin -acute, Seps awned, Pets linear denticul longer than 2-horned column, Lip ov -lanc obt cil at base tov under the apex
20209 Rhizoma creeping, Pseudo-b obl ang , Lf obl. lorate obt emarg , Flws umbel. lateral, Seps oblique falcate obt upper one short, Pets ov obt., Lip cord -ov complicate emarg Column furnished with a bristle on each side
20210 Pseudo-bulb tetragonal, Spike fleshy acuminate conical, Flws sessile fleshy, Bracts ov. obt , Sepals ov acute, Pets lin obt, Lip unguicul. ovate flat convex auriculed at base, Column furnished with 2 bristles on each side
20211 Pseudo-bulb ampullaceous depressed with 2 distant sheaths, Rac cylind many-flwd on long pedunc , Brcts small, Seps obt cil shorter than pets which are obov. with vil edges, Lip ov obt bident at base polished in middle
20212 Pseudo-bulbs obl. compressed covered with 2 membranous sheaths, Leaf narrow at base longer than loose spike, Sepals acum , Petals oblong obcord acute, Lip bicarinate recurved, lat. lobes undul obsol , Column 2-horned
20213 Rhizoma creeping covered with membranous scales distinctly bulbiferous, Pseudo-b small, Lvs mucr obl fleshy convex on back, Flws small, Seps closed ov equal ending in soft bristle, Pets oval obt , Lip mar ov obt smooth
20214 Lvs obl obt petl scarcely bulbous at base, Spike secund loosely sheathed at base many-flwd, Seps acum spath acute glandular inside, Lip ovate narrow bluntly acum cil channeled at base
20215 Lvs obl flat petiol coriaceous, Flws sol flat resupinate, Dorsal sepal flat ovate acuminate, lateral ones and petals same form twisted, Lip small unguiculate subtrilobed acuminated
20216 Pseudo-b obl.-ovate sheathed 1-lvd on a creeping rhizoma, Lf obl -lanc obt narrowed at base, Rac length of bulbs, Pedunc. short scaly, Flws imbricate, Seps ovate acum , lat ones twice the size of rest and connivent, Pets small acum , Lip ovate unguiculate unidentate on both sides, Column 2-horned
20217 Pseudo-b long-ovate, Lvs broad-lig obt shorter than glab. scape, Spike tail-formed many-flwd drooping dwny, Seps acum hairy and gland , Pets short acute fringed, Lip obl -lin emarginate obt hairy above, Anther gland
20218 Lvs obov -obl coriac petiolate, Pedunc naked 1-flwd rising from falcate cucul brcts, Seps oblong acute, lateral ones falcate, Petals smaller reflexed, Lip unguiculate cordate-ovate acute channeled recurved at apex
20219 Lvs obl coriaceous margin at top chan eled at base, Flwr large solitary, Seps lanc , lateral ones ventric at base, Pets lin converging into the form of the hand, Lip ov conc at base beaked at apex, Column toothless
20220 Flws solitary glabrous, Sepals obl obt , lateral ones convex longer, Petals conform but narrower, Lip tongue-shaped obtuse smooth bijugated at base behind and rough between the juga
20221 Pseudo-b tufted ovate compressed 1 lvd, Leaf oval of a different colour beneath unequal at top emarginate, Scape pendulous, Spike imbricate Sepals ovate acuminate, Petals obovate
20222 Pseudo-bulb tetragonal, Leaf obl obt Scape long, Bracts membranous, Seps triangular downy on edges, Petals horn formed glabrous, Lip sessile linear downy on edges bearded, Horns of column falcate

20223 Pseudo-b ovate tetrag , Leaf obl convex emar , Sheaths of scape obl. vent , Flws in dense heads, Upper sepal acum , lower ones very long pendulous, Petals triangular acum., Lip ovate bicar nate, Auricle of column acute

and Miscellaneous Particulars.

3291 *Trichósma* A bulbless epiphyte, very similar in habit to a species of *Cælógyne*, but from that genus it differs in the projecting foot of the wingless column, in the singular fleshy anther, and in the eight pollen masses
20204 *Megaclinium bífo.* The rachis of the flowers of this species resembles a flattened snake with a single row of toads on its back, hence its specific name.

History, Use, Propagation, Culture,

20225 *Cirrhopétalum auriàtum.* This is the most interesting species of the genus It hangs down from the branch of a tree or a piece of wood, which it soon overruns with its delicate green roots and egg-shaped furrowed pseudo-bulbs The leaves are deep green above, and stained with purple beneath. The flower stems or scapes are slender and thread-like, and bear at top an umbel of flowers, which hang down gracefully and are balanced in the air. The flowers have a yellowish ground, striped and mottled with crimson

20224 Pseudo-bulb pyramidal truncate, Leaf oblong convex emarginate, Sheaths of scape oblong ventricose distant, Upper sepal ovate, lower ones very long petal cil., Pets obl cil., Lip obl bicarinate, Auricles of col setac.

20225 Pseudo-b ovate sulcate, Leaf convex obl. purple beneath, Flws umbellate, Upper sepal and petals setaceously acuminated ciliated, lateral ones acute, Lip linear recurved, Auricles of column rounded entire

20226 Pseudo-b ovate smooth, Leaf oblong acute tapering into petiole shorter than scape, Raceme scarcely umbelled loose, Seps lanceolate acuminate lateral ones very long, upper one acuminate incurved, Petals ovate acum., Column winged on both sides bidentate at top, Lip ovate acuminate fleshy recurved

20227 Pseudo-b glomerate ov -rndsh rather tetrag , Lvs usually 3 ov -lanc small ac , Seps rad. slend., Umb many-flwd Lat seps nar ligu ac cohering, upper one and pets ov acum fringed, Lip small tongue-shaped thick naked

20228 Pseudo b tetrag., Leaf oblong obt shorter than scape, Umbel dimidiate many-flwd, Dorsal sepal ovate, lateral ones linear-lanceolate, Petals ovate acuminate fringed, Lip ovate trisulcate bituberculate behind

20229 Pseudo-b ov -roundish rugose, Lvs ov -obl obt thick Scps terete elong Umbel many-flwd nutant, Lat. seps very long ligu , Pets ov ac cil at base, Lip tongue-shaped biaristate, Angles of column obsoletely bidentate

20230 Leaves lanceolate, Umbel many-flwd, Upper sepal galeate, Petals oblong obtuse serrulate apiculated, lateral ones lanceolate, Lip tongue-shaped obtuse fleshy

20231 Pseudo-b obl angular, Lf obl convex emarg , Flws convolute, Upper sepal cil set acum , lat ones obl obt., Pets acum cil villous, Lip linear recurved elevated along the middle, Auricles of column obtuse entire

20232 Lvs lanceolate cleft at top length of erect scape, Racemes many-flwd pendulous, Bracts linear acuminated, Sep. glab., upper one acum , lateral ones linear ligulat hardly acute, Pets acuminate subciliate

20233 Pseudo-b compressed one above another with a short 2-lvd neck Lvs erect ensate, Rac axil 2-3-flwd, Brcts on peduncs many ov. acum revolute, Seps and pets ov ac , Lip 3-lobed trilamellate, Lobes ac , middle obl larger

20234 Pseudo-b short obl usually 2-leaved, Lvs obl undulated, Rac erect, Bracts membranous coloured with revol. edges up ones lin reff., Lip 3-lbd with 2 short lamellæ and one long one, Mid lobe of lip trunc rugged apic.

20235 Stems compressed densely and loosely sheathed, Lvs obl -lanc many nerved, Racemes dense obl drooping on short peduncles, Flowers subglobose downy, Lip subcordate-ovate acute without appendages

β Stems twice the size of those of species, Spikes on longer pedunc, Flwr closer glob resembl small cowrie shells

20236 Pseudo-b oval compressed 4-lvd, Lvs obl -lanc coriaceous smooth, Rac tomentad sheathing at base, Lvs of scape or brcts lanc acum apricot-cld, Lat lobes of lip tooth-fmd, middle rhomb curled with 8 straight lamellæ

20237 Pseudo-b obl smooth 2—4-leaved, Lvs obl , Bracts membranous obl obt reflexed, Rac erect, Petals and sepals erect, Lip 3-lobed trilamellate at base, middle lobe roundish obt 5-lamellate

20238 Stem elongated leafy, Lvs lanc acute spreading striated, Spikes opposite the leaves many-flwd nutant, Bracts adpressed, Sepals and petals ovate acute erect smooth, Lip cordati-ovate acute bicarinate at base

20239 Stems fleshy rather flexuous terete, Lvs lanc acum , Racemes opposite the leaves spreading many-flwd downy, Bracts ovate concave turned back, Lip narrow naked sac ute at base, the middle segm cuneate tridentate

β Spikes long, Flowers white

20240 Stems pend densely clothed with decid hairs, Lvs lanc coriaceous obt entire densely vill. beneath, Rac elong many-flwd, Brcts coriaceous persistent, Flws villous, Sepals lanceolate lateral ones ending in a horn connate Petals shorter glabrous, Lip 3-lobed, middle lobe curled emarginate pilose

20241 Stems terete jointed sheathed, Lvs obl obt , Rac erect lateral many-flwd sc dv at base, Bracts ov acute ovary villous, Lat lobes of lip erect trunc , middle lobe ov serrated subplicate, Crests 4-tthd, middle one fleshy

20242 Pseudo-bulb sheathed wrinkled 1-leaved, Leaf coriaceous lanc , Spike axillary few-flowered glabrous

20243 Lvs linear-lanceol acum glauc beneath, Stems terete elong pend , Racs term aggregate cylind. many-flwd, Seps woolly ov obt , Pets smaller spotted, Lip 3-lbd callous at base and apex, Lbs spottd, middle one trunc

20244 Lvs coriaceous ovate or shortly cultrate obt , Flws sol term., Lip linear-obl. emarginate without a crest ciliately toothed rather downy [situated horseshoe-formed line

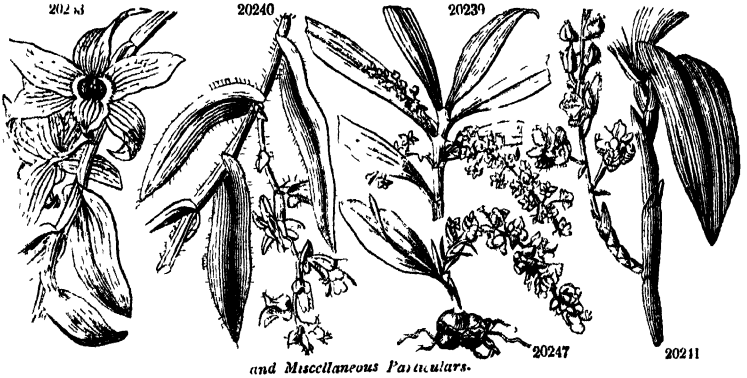
20245 Lvs lanc equal-sided approximate acute, Flower sol. axil., Lip cuneated elong surrounded at apex with a thick

20246 Lvs lanc , Flws solitary axillary, Lip emarg. curled at top with 2 obsolete lines running along the middle

[Pets obovate-oblong glabrous, Lip broad-oblong revolute villous in middle, the middle lobe roundish

20247 Pseudo-bulbs roundish compressed aggregate 1-lvd, Lt petiol nutant downy, Pedunes bract , Brcts folia concave,

20248 Lvs lin obl obt recurved channeled, Panicle short strict spicate with clavate branches, Lip fleshy, middle lobe emarg crenate, lat ones short ac , Disk mealy convex at base [Lat lobes short, middle one obt undulated



20249 Pseudo-b ov , Lvs obl -lin undulated shorter than the simple obt raceme, Flws drooping, Lip 3-lobed downy,

20250 Pseudo-bulbs conical subcompressed annulate, Scape subclavate racemose at top, Sepals expanded emarginate, lateral ones large, Lip fiddle-shaped crenulated in the middle pulvinate dilated at apex and membranous

20251 Lvs 2 obl -linear flat oblique at apex, Scape 2-edged terminated by yellow flowers streaked with red, Rac term 7—8-flwd downy, Sepals lanceolate acute, upper one oblong linear concave spiculate, Pets a little shorter flat obovate obtuse, Lip bidentate bearded with long hairs

20252 Lvs broad-lin fleshy channeled obliquely emarginate shorter than scape, Lat seps keeled, Lip cuneate 5-lobed clothed with dense deciduous down similar to powder

20253 Stems pendulous, Lvs ovate-oblong obtuse nerved subcordate at base, Sepals lanceolate, Petals oblong acute, Lip downy convolute denticulate subunguiculate ovate or soletely 3 lobed

and Miscellaneous Particulars.

20252 *Epiphora* A curious little epiphyte, bearing yellow flowers streaked with red.

20253 *Mycaránthes.* A fleshy-leaved epiphyte covered with rusty down, with small white flowers

20253 *Dendróbium macrophýllum* is said to be one of the handsomest of the species. The flowers being 9 inches in circumference, of a bright rose colour, the lip deeply stained *D. cucumérinum* is a curious little species, with the stems and branches resembling small cucumbers, and the flowers rather small of a dirty white streaked with pink

20254 Stems terete pendulous, Lvs obl -lanc subplic , Rac. lat. strict many-flwd, Brcts short ov obt , Seps ov acum. subcord , Petals oblong obtuse more slender and broader, Lip unguiculate shell-shaped very blunt ciliated
20255 Stems pendul., Lvs ov -lanc. acute, Peduncs 2—3 flwd, Sepals oblong acute entire, Petals broader fringed, Lip large shell-formed with plumose edges [cecd , Lip cuculiate veiny, the limb ov obt cil. downy inside
20256 Stems terete pendul whip-formed, Lvs ov lanc. rather membran , Flowers by threes, Sepals ov ac , Petals lan-
20257 Stems ter. pendul , Lvs contorted ov.-lanc. acum , Flws rising from among leaves, Seps fleshy obl. obt with tuberc vems outside, Pets obov. retuse fleshy shorter than up sepal, Lip cucul dentic retuse slightly 3-lobed
20258 Stms terete sulcate, Lvs ovate-lanc. acum obsoletely emarg , Peduncs 2-flwd, Seps oblong acute, Pets broader obov acute serrulated, Lip unguic ovate concave undivided vil with multifid fringed margins
20259 Stms pendulous thickened in the middle, Lvs ovate very acute, Peduncs 2-flwd, Pets lanceolate broader than seps, Lip cuculiate rounded undivided pilose above
20260 Stms pend terete clav., Lvs obl ac. flat obliquely emarg., Peduncs usually 2-flwd aggregate lat., Seps lin ov. acum obt., Pets broader ov. ac undulated, Lip oval undulated blunt undiv serrul in middle downy in centre
20261 Stems terete, Lvs lanc obliquely emarg bluntish, Flws solitary, Seps lin -lanc spreading bluntish, Lip roundish undivided cucul fimbriately toothed downy on both sides foveate and bilamellate at base, Snout short obtuse
20262 Stems terete pendulous Leaves ovate-lanceolate acuminate oblique at top, Flowers geminate, Sepals acuminate, Petals obtuse larger than upper sepals, Lip oblong undulated ciliated downy inside
20263 Stems erect clavate sulcate subflexuous comp , Lvs oblong acute 3-nerved Peduncles lateral 3-flwd, Bracts small minute adpressed, Pets oblong obt glab about equal to seps Lip obcord hairy with a channeled sulcate claw
20264 Stems terete, Leaves ovate-lanceolate acuminate flat, Flowers twin, Sepals spreading bluntish convex with reflexed edges, Lobes of Lip rounded, middle ones undulated with an elevated villous line
20265 Stems terete pendulous, Leaves ovate-lanceolate, Flowers twin, Sepals and petals ovate bluntish spreading, Lip 3-lobed glab , Middle lobe retuse plicate, Claw conic short furnished with a horn-formed downy appendage
20266 Leaves ovate-oblong undulated acuminated, Flowers spreading, Sepals and petals ovate, Lip 3-lobed pubescent, Middle lobe denticulated, lateral ones broader serrulated
20267 Stems erect hispid flexuous, Lvs ov lanc very oblique at top, Flws fascic or solitary term , Bracts ovate acum hisp , Lateral sepals combined with a long spur, Lip funnel-shaped cucul dentate adhering at base to column
20268 Stems terete leafy, Lvs lanc acute, Racs short 4 flwd Seps oval obt , Petals broader ovate, Lip rhomb undul acute downy in middle, Column tubercled on both sides and furnished with a deflexed horn behind at base
20269 Stems terete pendulous pil , Lvs distich ovate obliquely emarginate obtuse, Racs short terminal 4—5 flwd, Bracts short ovate, Seps oblong acute, lateral ones drawn out at base, Pets broader acute, Lip obovate dilated retuse
20270 Flower larger, Lip with a large black spot in the middle [joined with column into a spur
20270 Stems terete pendulous, Leaves oblong-lanceolate entire at apex, Racemes 3—4 flowered Sepals lanceolate, Petals larger oblong undulated obtuse, Lip obovate cuculiate ciliated
20271 Stems terete pend , Lvs lin -lanc and oblong Racs lateral loose 5—6-flwd, Bracts short, Seps spreading, Pets broader oblong obtuse reticul , Lip ungnic very blunt with abruptly inflexed fringed downy edges
[longer than sepals, Lip oblong curled at top and furnished with 3 elevated lines
20272 Leaves oblong obliquely-emarginate, Racemes oblong lateral, Sepals ovate bluntish, Petals linear contorted
20273 Leaves oval-oblong acute 7-nerved, Racemes short many-flowered, Sepals ovate spreading broader than petals, Lip linear-spatulate acute beardless, Spur thick length of ovary
20274 Stems erect, Leaves oblong retuse, Racemes lateral terminal secund, Sepals ovate, lateral ones combined into an obtuse incurved horn, Lip entire acute tumid at apex
20275 Stems clav artic furrowed, Lvs lin retuse Peduncs 2-flwd, Seps oblong acutish undulated twisted, 2 lateral ones running into a retuse spur, Pets oblong Lip large downy obovate shell-formed pulvinate inside at base
20276 Stems strong pendulous, Leaves ovate-oblong obtuse nerved subcordate at base, Sepals ovate-lanceolate, Petals oblong rather undulated, Lip roundish acute
20277 Pseudo bulbs angular, Stems swelling at joints leafy towards the tops Lvs obl acute nerved, Racs lateral many flwd, Bracts plicate, Seps ovate-oblong spreading rose-cld, Pets larger straw-cld ciliated, Lip nearly square broad ciliated straw-cld with a deep yellow blotch
20278 Stem erect covered with black villi, Leaves linear acutely and obliquely 2-lobed, Peduncles 2-flowered, Sepals and petals acuminate recurved, Lip linear-lanceolate 3-lobed trilamellate, Lateral lobes short
20279 Lvs acuminate, Racemes nutant elongated many-flowered, Bracts minute obtuse, Flowers rather fleshy, Sepals roundish combined into a short horn at base, Pets broader entire, Lip cochleate obtuse villous fringed
20280 Stems erect fusiform, Leaves oblong emarginate distich, Racemes terminal many-flowered, Sepals and petals linear-obl spreading curled, Lip crenulated, Lateral lobes acute, middle lobe lanceolate with 5 wavy lamellæ
20281 Pseudo-bulbs ovate lengthening into a neck 2-lvd at top, Lvs oval emarg , Peduncles terminal 2—3-flwd, Seps ovate emarg , Pets obovate apiculate, Lip 3-lobed downy, Middle lobe with 3 elevated lines along the centre
20282 Stems erect Flowers twin nutant white, Lip blood-coloured, Bracts scale-like, Sepals linear-lanceolate, Petals oblong incurved broader, Lip roundish-obovate flat retuse apiculate entire
20283 Stem obovate compressed 2—6-leaved, Leaves oval acute striated dilated at base stem clasping, Racemes about 4 flowered drooping, Sepals and petals ovate erect, Horn elongated obtuse, Lip cuneate smooth sulcate
20284 Stems terete erect, Flowers twin, Sepals and petals oblong obtuse fleshy, Lip oblong entire subsinuated obtuse plicately veined, Horn short obtuse
20285 Dwarf nitric tufted, Branchs short artic cylind 1-lvd, Lvs obl terete beset with rows of tubercs, Peduncs short 3-flwd, Seps and pets lin acum obt , Lip 3 lbd, lat lbs triang , middle ones ov curled with 4 wavy lamellæ in centre, Cinandrium denticulated [flwd peduncles, Seps and pets lanc , Lip short rhomb ovate
20286 Stem clavate short sulcate 3-leaved at top, Leaves ovate-lanceolate obliquely emarginate shorter than 4—5-
20287 Stems slender, Racemes loose white with a deep yellow stain on the base of lip, Lip downy fringed near the base with long hairs furnished with a 3-lobed tubercle, Flowers something like hawthorn
20288 Stems elongated 3—5-leaved at top, Racemes erect elongated few-flowered, Petals roundish twice as broad as seps, Lip 4-lobed crested in middle bigibbous at base, Lobes roundish , Lateral seps drawn out into a spur

History, Use, Propagation, Culture,

3204. *Ponèra.* The species have the roots of *Neóttia*; the stems are tall, the leaves are grass-like, and the flowers are fascicled and buff-coloured. They are terrestrial plants.

20289 Stems pend., Lvs lin.-lan. acute ent. Flws by threes, Seps and pets ov.-obt., Lat. ones broadest with a rounded horn, Lip unguic. ovate conc. spic. closely appressed to the column vill. inside glab. on the disk, Stigma vill.

20290 Roots villous, Stems elongated branched, Lvs ovate-oblong obtuse, Panicle racemose terminal many-flwd, Seps ovate acute, Pets and lip obl. undul. rounded emarg. with a 3 lobed yellow tubercle in the middle, Style vill.

20291 Pseudo-bulbs clavate many-ribbed 2—4-leaved, Leaves oblong horizontal, Racemes lateral loose slender arched, Seps and pets flat oblong very blunt, Lip undivided cuneat. roundish downy minutely pectinated and fringed

20292 Stems terete, Flowers loosely corymbose, Pedicels filiform glaucescent, Sepals linear-oblong, Petals broader obovate, Lip 3-lobed, Lateral lobes small acute, middle one linear-oblong villous at base pea-green

20293 Stems creeping, Leaves filiform terete, Leaflets of perianth long linear narrower at top, Lip tricarinate, Middle lobe linear-lanceolate curled

20294 Leaves linear-lanceolate obliquely emarginate, Spike about 2-flowered axillary on a leafless stem, Lip 2-lobed entire, Clinandrium furnished with a dorsal tooth

20295 Leaves linear-lanceolate obliquely-emarg., Spike about 2 flwd terminal on a leafy stem, Lip acute crenulated and recurved at apex, Clinandrium mutic

20296 Stem erect compr., Lvs lin., Flws axill. and term. nutant, Seps lin.-lanc. spreading, Pets lin. converging, Lip 3-lobed, Middle lobe linear acuminate [tuse with 3 elevated lines and 2 callosities

20297 Leaves long narrow distich recurved, Racemes short drooping nearly sessile, Lip tripartite, Mid. lobe linear re-

20298 Leaves ovate obtuse, Peduncles 2—4-flowered sessile, Sepals and petals linear-oblong obtuse spreading, Lip repand a little lobed emarginate bicallous at base

20299 Stem branched, Flowers racemose, Ovaries subsecund pendulous much longer than setaceous bracts, Sepals lanceolate acuminated, Lip adnate 3-lobed bilamellate at base, Lateral segm. triang., middle one lanc.-oblong

20300 Leaves linear obtuse emarginate, Racemes terminal loose few-flowered, Sepals ovate-lanceolate, Petals linear spreading, Lip subcordate-ovate acute concave [tals linear-lanceolate, Lip 4-lobed, Lobes linear blunt

20301 Leaves distich lanceolate sheathed with warted sheaths, Flowers rather panicled, Sepals oblong concave, Pe-

20302 Stem clavate 2-leaved, Leaves lanceolate, Raceme simple, Bracts ovate channelled, Sepals and petals lanceolate linear, Column clavate, Lip 3-parted bicallous at base, Middle lobe unguiculate obtuse

20303 Stem branched sheathed by loose imbricate membranes, Leaf solitary falcate acute, Peduncles long, Sepals and petals linear-lanceolate, Lip 4-parted bituberculate at base, Middle lobe linear-lanceolate

20304 Pseudo-bulb fusiform, Leaves oblong obtuse, Raceme radical panicled, Sepals lanceolate, Petals narrower, Lip tripartite, Middle lobe transverse 2-lobed or emarginate fringed

20305 Pseudo-bulb obovate 2-leaved, Leaves narrow oblong, Raceme terminal cylindrical, Flowers rising from scales, Sepals linear, Petals linear-lanceolate acuminate, Lip oblong convex entire

20306 Pseudo-bulb ovate compressed ribbed 3-leaved, Leaves narrow elongated acute, Raceme dense many-flowered, Ovary 3-winged, Sepals linear, Petals lanceolate, Lip cochleate crenated curled

20307 Pseudo-bulb elongated, Lvs obl.-lanc. ac., Racs short term., Seps and pets lanc. acum. reflxd, Lip ov. shell-fmd

20308 Leaves distich oblong-lanceolate, Raceme terminal, Sepals and petals nearly equal oblong acute concave spreading, Lip 4-lobed, Sepals keeled

20309 Leaves long distich, Panicle nutant dense many-flowered rising from 2 spathes, Sepals oblong-lanceolate, Petals linear obtuse, Lip 3-lobed, Lateral lobes semicircular, middle lobe 2-lobed linear

20310 Stems erect simple, Leaves lanceolate acute subplicate, Racemes pedunculate cylindrical nutant, Sepals ovate, Petals setaceous, Lip subcuculate, Lateral lobes roundish, middle lobes ovate acuminate

20311 Leaves distich lanceolate, Racemes terminal and lateral many flowered, Sepals ligulate obtuse, Petals linear cuneate mucronate, Lip 6-lobed with 3 callosities at base

20312 Leaves distich lanceolate acuminate, Stem naked scaly, Racemes cylindrical many-flowered, Flowers drooping, Sepals linear-lanceolate, Petals ovate acute, Lip ovate acuminate entire crested at base

20313 Leaves narrow sub-distich keeled concave obtuse, Spike dense terminal, Bracts keeled distich, Sepals keeled, Petals linear spatulate, Lip roundish flat emarginate callous in centre

20314 Leaves distich elliptic-obtuse concave, Stems naked scaly, Sepals and petals linear-lanceolate, Lip 3-lobed, Lateral lobes jagged, middle one small truncate denticulate callous at base

20315 Leaves distich oblong, Sepals and petals lanceolate nearly equal, Lip 3-lobed keeled bituberculate at base, Lateral lobes jagged, middle one obcuneate truncate

20316 Leaves distich oblong obtuse with dotted edges, Stem simple leafless at top, Sepals and petals linear-lanceolate acute equal, Lip 3-lobed keeled, Lateral lobes rounded jagged, middle one cuneate curled triangular at top

20317 Leaves oblong-ligulate acuminate, Panicle large drooping, Sepals oblong-concave acute, Petals narrow linear, Lip 3-lobed 3-keeled, Middle lobe 3-lobed minute [sulcate bicallous with involute edges

20318 Lvs distich obl.-lin. obt., Pedunc. sheathed, Flws panicled, Seps and pets lanc. obt., Lip 3-lobed, Middle lobe tri-

20319 Leaves coriaceous oblong acute, Peduncles slender subpanicled at top, Petals long filiform, Lip ovate toothed with 3 tubercles at base

20320 Pseudo-bulb ovate acuminate 2-leaved, Lvs oblong-ligulate acute sheathing at base, Raceme erect many-flowered, Sepals and petals ovate-lanceolate acute, Lip linear callous and bifoveate at base

20321 Pseudo-bulb spherical, Scape panicled, Sepals and petals obovate-oblong, Lip free 3-lobed cucullate, Middle lobe curled acuminate with an elevated callous furrowed downy disk

20322 Pseudo-bulb oval compressed 2-leaved, Raceme narrow, Sepals and petals equal linear acuminate, Lip roundish 3-lobed cordate, Middle lobe longer obscurely tridentate downy at base, Capsule 3-winged

and Miscellaneous Particulars

20324 *Epidendrum stamfordianum* is found on the coast of Guatemala in shady moist lands, the plant, therefore, will require an unusually moist atmosphere.

History, Use, Propagation, Culture,

3205 *Eriópsis biloba* has the habit of *Erva* when not in flower. It has large plicate leaves. The history of its introduction is unknown

3206. *Hexadésmia* The flowers are those of *Aporum*, and the structure of the pollen is that of *Epidendrum* The stems are erect and rise from rhizomata.

20323 Pseudo-b compressed imbric ov. usually 2-lvd, Lvs ligu -obl. undul rather oblique at apex, Rac loose about 7-flowered spathaceous at base longer than lvs, Seps and pets equal spreading oval-linear acute variegated with brown, Lip nearly free rhomboid acute deflexed on both sides

20324 Pseudo-bulb ovate compressed 2—3-leaved, Leaves linear-lanceolate, Scape flexuous many-flowered, Sepals lanceolate acute, Petals smaller subspatulate, Lip free 3-lobed, Middle lobe obl cucul. with 3 crested callos.

20325 Glaucous, Pseudo-bulb oval compressed 1-leaved, Leaves ensiform, Scape pendulous panicled, Sepals and petals oval obtuse Lip linear 3-lobed Middle one oval callous in centre

20326 Pseudo-bulb ovate 2-leaved, Leaves linear-lanceolate obtuse mucronate, Scape many-flowered, Sepals and petals linear striated, Lip 3-parted, Lateral segments inclosing the column, middle one long curled

20327 Leaves ligulate rounded and obscurely 2-lobed at top, Raceme panicled, Sepals and petals nearly equal lanceolate-obovate, Lip 3-lobed free, Middle lobe ovate with elevated veins in centre

20328 Pseudo-bulb oblong 2-leaved Leaves linear channeled acute, Raceme simple, Sepals and petals linear-lanceolate equal acute, Lip 3-lobed Middle lobe ovate-oblong, lateral ones linear

20329 Pseudo-bulb ovate corrugated many-leaved, Leaves ensiform, Raceme simple very long, Sepals oblong, Petals cuneate, Lip free 3-lobed, Middle lobe oblong obtuse curled

20330 Pseudo-bulb ovate-oblong 2 leaved, Leaves ensiform obtuse, Scape panicled tall many-flowered, Sepals and petals lin -obl spatulate uniform, Lip nearly orbicular 3-lobed keeled at base Middle lobe broad lined wavy curled

20331 Pseudo-bulb roundish-ovate 2-leaved, Leaves oblong-linear scabrous as are the scape and petioles, Sepals and petals nearly equal obovate-lanceolate, Lip 3-lobed, Middle lobe emarginate bilamellate at base

20332 Pseudo-bulb pear shaped 3-leaved Leaves linear acute keeled glaucescent Scape erect simple many-flowered, Flws distant, Seps ovate-lanceol te acute Pets narrower obt , Lip 3-parted, Middle segment obscurely 4-lobed

20333 Pseudo-bulb ovate wrinkled 2-leaved, Leaves linear-oblong bluntish, Sepals and petals obovate-lanceolate incurved, Lip 3-lobed, Middle lobe large obcordate, Disk callous

β Lip base-coloured

20334 Pseudo-bulb 3 leaved, Leaves lanceolate Scape branched, Sepals oblong acute, Petals linear-lanceolate, Lip cuneate 3-lobed, Middle lobe large ciliated subremiform furrowed mappendiculate in disk

20335 Ps -b tufted ov 2—4-lvd, Lvs lin ribbd twisted, Rac panicled term Ovar scab from dots Seps and pets equal spat ac spread , Lip 3-lbd bical at base Lat lbs short connv falc , mid cord Col uncinly auric at top

20336 Pseudo-bulb 2-lvd, Lvs ligul acute, Scape simple slender, Seps and pets nearly equal lanc -lanc varnished, Lip free unguic 3-lobed downy at base Middle lobe reniform emarg painted with tubercled and varicose veins

20337 Pseudo bulb obversely pear-shaped tufted 1—3-leaved, Lvs lin acute recurved grassy, Spike term loose-flwd, Bracts scale-formed, Seps and pets nearly equal lin -obl obt , Lip 3-lbd callous in middle, Middle lobe emarg

20338 Pseudo-bulb ovate 2-leaved Leaves ensate obtuse, Panicle loose Sepals and petals uniform spatulate unguiculate obtuse, Lip 3-lobed free, Claw concave, Segments rounded

20339 Pseudo bulb ovate smooth tufted 2-leaved, Leaves long linear obtuse, Panicle elongated loose slender, Sepals and pets lin -spatul , Lip nearly free 3-lobed, Lat lobes reflxd, mid one rounded entire undul , Disk b cost

20340 Pseudo-bulb ovate 3-leaved, Scape terminal, Raceme many-flowered Sepals broad-linear, Petals spatulate, Lip 3 lobed bilamellate, Middle segment roundish curled [tals lanc ac , Lip 3-lobed Middle lobe roundish

20341 Pseudo-bulb obversely pear-shaped aggregate 2-leaved, Leaves lanceolate acute, Scape 2-flwd Sepals and pe-

20342 Pseudo-bulb ovate-oblong terete 2-leaved, Leaves ensiform, Raceme few-flowered, Bracts small, Sepals and petals obovate-lanceolate acuminate, Lip 3-lobed, Middle segment cordate plicate cuspidate

20343 Scape few-flowered, Flowers pendulous on long peduncles closed, Ovary fusiform large warted, Lip 3-lobed Lateral lobes linear, middle lobe ovate with elevated veins

20344 Flowers densely racemose, Sepals oblong-lanceolate acute, Petals roundish unguiculate apiculate, Lip 3-lobed, Lateral lobes oblong truncate reflexed, Middle one longer curled rhomboid acuminate with replicate leaves

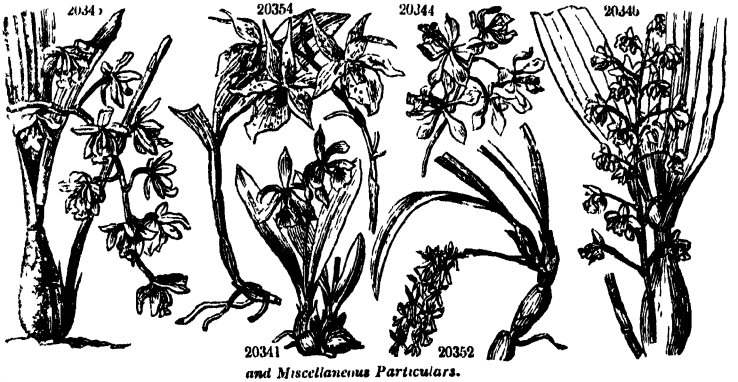
20345 Pseudo-bulb oblong-ovate wrinkled 2-leaved, Raceme radical many-flowered nutant, Lip hairy striated, Mid-

20346 Stem succulent leafy at top, Racemes radical many-flowered erect [dle lobe small entire

20347 Stem fusiform, Lvs linear, Racs flexuous few-flowered, Bracts ovate membranous, Lip obovate deeply 2-lobed [2-horned on both sides

20348 Stems fusiform elongated, Lvs linear obliquely bidentate, Flws usually solitary, Lip ovate retuse subserrated

20349 Raceme many-flwd, Bracts lin acum membranous, Lip 3 lobed, Lateral segm roundish, middle one apiculate



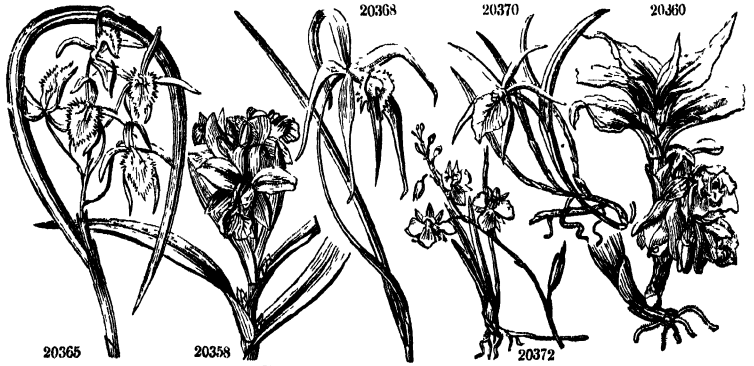
20350 Stem fusiform compressed 2-leaved, Leaves linear emarginate, Flowers in fascicles of 2—4 rising from bracts, Lip plicate

20351 Stem slender with rough sheaths, Leaf solitary long curved, Spike dense, Flowers pink

20352 Pseudo-bulbs elongated fusiform, Leaves linear-lanceolate, Sepals and petals obtuse

20353 Stems fusiform Leaves narrow, Peduncles slender racemose scaly terminal, Flowers drooping

20354 Stems 2—3-leaved, Leaves oblong coriaceous, Raceme loose many-flowered terminal, Sepals lanceolate-acuminate, Petals ovate-oblong acuminate, Lip ovate subunguiculate lamellate in centre



and Miscellaneous Particulars.

3207 *Arpophyllum* is an epiphyte with pink flowers.

3208 *Otochilus.* A curious little epiphyte from Nepal.

1809 *Barkeria.* Elegant Mexican plants, with much the habit of *Cattleya.* The flowers are large, elegant, and drooping

History, Use, Propagation, Culture.

3210. *Arundina* is a genus of splendid plants, having the appearance of reeds. The flowers are like those of *Cattleya*. The species are said to grow on rocks. Pot them in brown turfy peat, with the pot well drained, giving the plant plenty of water when growing freely. *A bambusæfolia* grows in a forest of Chittagong on the face of moist rocks

20355 Leaves oval acute, Bracts linear, Lip oblong apiculated bicarinate unguic, Column clavate winged tridentate
20356 Leaves distich lanceolate-acuminate, Stem naked scaly, Raceme cylindrical many-flowered, Flowers drooping, Sepals linear-lanceolate, Petals oval acute, Lip ovate acuminate crested at base

20357 Caulescent, Leaves bifarious linear-lanceolate acuminate, Raceme terminal, Sepals linear-lanceolate, Petals obovate ventricose, Lip length of petals 3-lobed, Middle lobe more or less cloven
20358 Lip obovate rounded 4-lobed apiculated, Segments roundish, Lamellæ 3 equal curled straight, Petals oblong

20359 Pseudo-bulb oval compressed 1-leaved, Lvs ensiform flat longer than few-flwd spike, Bracts lin.-lanc. acum. chaffy, Flowers secund, Seps and pets linear-lanceolate, Lip fleshy dilated at top furrowed along the middle

β Sepals and petals brownish-yellow, Middle lobe of lip spotted [2-lobed
20360 Bracts cucullate veiny leafy longer than ovary, Seps and pets ovate obtuse, Lip 3-lobed, Middle lobe smaller
20361 Bracts short ovate, length of pedicel, Dorsal sepal linear-oblong, lateral ones acuminate, Petals falcate, Lip 3-lobed, Lateral lobes falcate, middle one roundish curled emarginate

β Leaves narrower, Sepals ovate-oblong not obliquely cordate as in the species

[Lip sessile roundish acute lobed on margin
20362 Leaves coriaceous flat obtuse oblong glaucous, Spathe 1-flowered, Sepals and petals linear-lanceolate obtuse,
20363 Lvs oval flat glauc fleshy, Lip sess cucul cord subtrilobed edged with long hairs and a large callosity on disk
20364 Lvs lan.-lanc fleshy channeled, Seps and pets lin.-lan., Lip obcord acum veiny ser at base on long ser claw
20365 Lip oval or ovate acum ciliately toothed sessile, Pets and seps lin.-lanc acum, Clinandrum cucullate cut
20366 Lip cordate acuminate length of claw, Petals and sepals linear acuminate glabrous, Stems nodose at base
20367 Lvs terete straight, Flws almost sess, Seps and pets lin. spreading, Lip roundish-ov twice as long as its claw
20368 Lip 3-lobed, Lateral lobes roundish fringedly denticulate, middle lobe very long cuspidate awl-shaped entire, Sepals and petals long acuminate
20369 Lip ovate acuminate entire, Sepals and petals linear acuminate, Lateral teeth of clinandrium emarg behind

20370 Stem branched, Leaves teretely compressed subulate channeled, Seps and pets linear obtuse, Lip cordate
20371 Stem 1-flowered, Lip entire exterior, Petals tuberculate [acuminate entire
20372 Scape racemose, Lip large clasping the base of the column deeply 3-lobed, Column broadly winged [acuminate
20373 Leaf flat narrow-lanceolate stiff, Lip large roundish quadrate acuminate longer than claw, Seps and pets linear

[lin.-lanc, Pets obl.-lanc. obtuse, Lip large convolute about column roundish Lateral lobes obsolete
20374 Pseudo-bulb oblong, Leaves narrow-oblong emarginate, Peduncle 2-flowered rising from the spathe Sepals
20375 Pseudo bulb ovate 2 leaved, Leaves linear shorter than many-flowered spike, Sepals oblong-lanceolate acute, Lip 3-lobed Lobes roundish, middle larger apiculate reflexed [lamellæ on disk, Crest of anther 2-eared
20376 Scape long many-flwd, Seps and pets lin.-obl obtuse, Lip 3 lobed, Middle lobe with 5 large subserrated truncate
20377 Pseudo-bulb ovate compressed oblong obtuse shorter than scape, Corymb 3—4-flowered Sepals lanceolate obt Pets elliptobt ttish, Lip 3-lbd, Lat lobes roundish, middle one obl wavy larger with 2 elevated lines
20378 Pseudo bulb cylindrical elongated 2-leaved, Leaves oblong wavy, Scape slender 4—5-flowered, Sepals and petals lanceol, Lip convol recurved 3-lbd, Lateral lobes acute, middle one oval curled with 4 elevated lines
20379 Pseudo-bulb 1—2-lvd, Lvs obl. cornic, Scape longer than lvs with distant sheathing scales, Racemes cylind, Seps and pets obl.-lin obt, Lip 3-lbd Lat lbs wavy having 4 elevated lines, middle one sess, curled recurved
20380 Pseudo bulb ovate compressed wrinkled 1-leaved, Leaf emarginate, Flowers corymbose, Bracts linear, Sepals linear pointed, Petals lanceolate wavy pointed, Lip 3-lobed, Lateral lobes rounded, middle lanc wavy pointed
20381 Leaves narrow equal to few-flowered scape, Bracts ovate, Sepals lanceolate, Petals oblong-lanceolate, Middle lobe of lip roundish emarginate flat, lateral ones small obtuse
20382 Pseudo-bulb roundish compressed, Leaves oblong obtuse shorter than sheathing scape, Raceme many-flowered, Sepals linear, Petals lanceolate wavy, Lip auricled downy in centre with 2 elevated lines
20383 Pseudo-bulb clavate 1-leaved, Leaf coriaceous, Scape 2-flowered, Sepals lanceolate reflexed, Petals broad linear denticulately curled conv, Lip membr veiny undul 3-lobed, Lateral segments convol around the column
20384 Seps erectish ov, Pets lanc., Lip obl obsoletely 3-lobed cucul ov curled with an obsolete elevated line at base
20385 Pseudo-bulb ovate striated 1-leaved, Leaf oblong acute shorter than 1-flowered scape, Sepals lanceolate acuminate, Petals rhomboid-lanceolate, Ovary sublobate, Ovarium black with scurfy glands

20386 Scape 1-flowered bibracteate at top under the flower, Sepals oblong, lateral ones straight channeled upper one erect revo, Petals erect obl revo at apex, Lip roundish 3-lobed emarg with a pectinate rudish appendage
20387 Scape 1-flowered with a double acute cucullate bract just under the flower, Ovarium rather downy Sepals and petals ovate acute spreading, Lip roundish smooth with a 5-rayed appendage [mid one largest
20388 Bracts 4 times shorter than pedicel, Lip bidentate at top with convex flabellate veins and elevated lamellæ,
20389 Spk shrt, Brcts length of ovary, Seps ov. ac, Pets nearly conf, Lip rndsh cune ap cu wavy, with 5 elev lines
20390 Racemon many-flwd, Flws expand, Seps and pets lanc conc acum, Lip cord incurv. bifid, with 5 elev lam

and Miscellaneous Particulars.

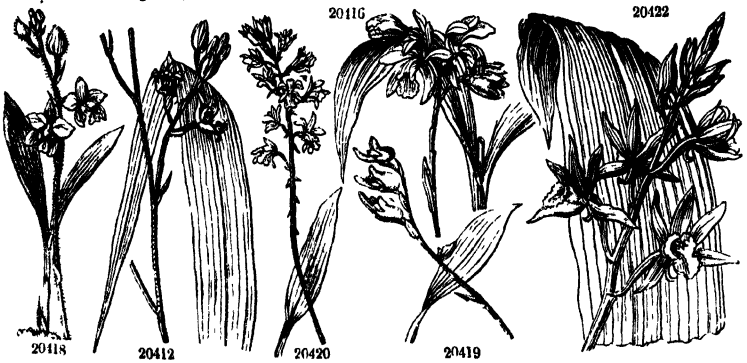
History, Use, Propagation, Culture,

2766. *Schombúrgkia* is a genus of remarkable plants. *S. tibicina*, the cow's-horn orchis of Honduras, has the flower-stem 9 feet high, and the pseudo-bulbs from 1 to 2 feet are hollow and smooth inside, as the Bamboo; and at their base is a small hole which leads to the interior and gives access to colonies of ants.



20391 Lvs broad ligulate recurved at top, Flowers 2—3, Sepals and petals oval acute, Lip nearly square narrower at apex retuse saccate at base angular reflexed fleshy with 3 small plicæ in middle on each side
20392 Scape many-flowered longer than leaves, Sepals ovate, Petals smaller conform, Lip shortly unguiculate obovate oblong undivided cucullate obtuse with 3 elevated fleshy lines in the middle corrugated

20393 Pseudo-bulb conical norn-formed annulate sulcate 3 leaved, Leaves oblong coriaceous, Scape long terete scaly, Panicle pyramidal loose, Sepals and petals wavy and curled, Lip oblong cucullate with 5 elevated approximate lines along the centre, Lat segs rounded at top, mid one subrhomboid emarg, Anthers emarg.
β Flws twice the size of those of the species, Lip pale outside, Mid lobe of lip yel. inside white edged with violet
20394 Pseudo-bulb fusi , Flws racemose, Bracts about equal to the ovarium, Lip ovate-oblong obtuse scarcely cucull obsoletly 3-lobed about eq. to obl curled seps and pets with 5 wavy lamellæ and 2 lat. slend straight ones
20395 Pseudo-bulb fusiform, Flws racemose, Bracts long spathac., Seps and pets equal lin undulately curled longer than lip, Lip cucul., Lateral lobes rounded, mid one ov. acute with 5 wavy lamellæ and 2 lat. straight ones

20396 Stems clavate sulcate, Leaves oblong margmate, Sepals oblong acute, Petals lanceolate acute broader, Lip 3-lobed, Lat lbs ac , mid one transverse emarg. dentic wrinkled from elev veins, Callosities 2 behind at base
20397 Stems clavate, Leaves ovate-lanceolate, Petals oblong wavy, Lip 3-lobed wavy, Middle lobe large
20398 Stems clav , Lvs 2 oval obt , Spathe short, Seps nar obl -lanc , Pets obl broader, Lip entire convol emarg flat
20399 Stem cylind , Lvs obl ellipt coriac marg , Seps obl -lanc callosely apicu , Pets ov -lanc acute broader, Lip 3-lobed cucul Lat lobes obliquely trun , mid one broad round emarg flat wrinkled from elev veins at base
20400 Stems clav obov ingular 1—2-lvd, Lvs ov -obl., Spathe shorter than peduncle, Seps lin -obl obt , Pets roundish-oval wavy, Lip large curled obtuse obsoletely 3-lobed, Middle lobe wavy emarginate with a smooth disk
20401 Stems short fusiform, Leaves obtuse, Spathe none, Seps lanceolate acute, Petals large thin wavy, Lip convolute with a convex undulated reflexed curled expanded limb [undiv ov. acum undul curled
20402 Stms thick obl -clav 1-lvd, Spth lge green, Seps lin -obov ac lanc , Pets broader oblong-lanc wavy curid Lip
20403 Stems ov covered by loose white mem scales, Lvs lanc glauc , Peduncle long solit , Flws fleshy pendul., Seps obl -ellipt , Pets conf broader Lip 3-lbd, Mid lb ov undu emarg with a broad elev. line along the middle
20404 Lvs narrow lanc , Seps obl apic , Pets oval, Lip 3-lbd, Lat lobes rounded, middle narrow curled shorter with numer elev lines [ments semi-ov , middle one with a broad sinus dilated rnded plic granu. denticu
20405 Stms terete slender 2-lvd, Lvs obl -lanc obt Pets obov -spatu wavy obt , Lip cucul 3 parted, Lateral segments ov -obl narrow, Stem tall terete, Seps lanc falcate acute, Pets broader reflexed wavy obt , Lip undivided flat dilated at top rounded crenated convex [Lip undiv flat bold orbic uniformly emarginate
20406 Lvs
20407 Stems cylind striated decumb 2-lvd, Lvs obl , Flws usually solit , Seps and pets lanc equal incurved spotted,
20408 Stems long fur 1-lvd, Lvs wavy obl obt emarg , Spathe large 1 flwd , Seps lanc , Pets obl wavy much broader, Lip obl emarg wavy cucullate at base [expand part crim. bord with white wavy, Seps rosy crim.
20409 Pseudo-b 2 inches long 2-lvd, Lvs ellipt , Flowers solit on long drooping pedunes, Pets much larger than seps
20410 Pseudo bulb 2-leaved, Lvs oblong coriaceous, Scape slender 8-flowered, Lip 2-lobed, Segments denticulate wavy recurved having the central veins bearded

20411 Sepals linear acute, Petals similar, Lip ovate convoluted acuminate

[nvent ov ac equal, Disk of Lip with 5 straight wavy lamellæ, Lat. lbs ov , mid one dilated curled at apex
20412 Lvs ensiform plicate, Scape tall radical, Seps two of which are lamellate in the middle and are with petals con-
[middle lobe ovate curled with 5 elevated wavy lines
20413 Scape simple long, Sepals and petals lanceolate-linear erect, Lip oblong 3-lobed, Lateral lobes short incurved,
20414 Lvs obl -lanc 7-nerved acum , Flws racemose, Seps and pets green nearly equal cuneate-oblong secund collateral, Lip 3-lobed, Lateral segs short erect, middle one mem obov emarg bilamellate along the middle
20415 Sepals obl -lanc , Petals ovate lanc spreading, Lip cucullate, Lateral lobes rounded short, middle one roundish emarginate convex unguiculate, Leaves lanceolate
20416 Lvs obl -lanc plicate acute, Racemes 6—9-flwd, Bracts obl obt. cucullate deciduous, Seps spreading linear-obl Pets broader undulate, Lip 3-lbd, Segs obt , middle one crenu curled with 5 lamellæ and 2 short lat. ones
20417 Lvs broad-lanc 9—11-nerved equal to scape, Raceme contracted, Bracts green concave obtuse, Lateral lobes of lip linear erect about equal to column [dle one cuneate emarg with 3 villous lamellæ
20418 Lvs 2 lanc lin shorter than downy scape, Rac. secund downy, Bracts acum , Lat lobes of lip obl. erect, mid-
[and 3 secund flws, Lower sep large and grown into a bag beyond which project a pair of lin reflexed petals
20419 Pseudo-b slender tapering 1-lvd, Leaf petiol oval thin, Scpe radical furnished with about 6 loose distant scales
[bilamellate at base, Anther 2-horned
20420 Leaf oblong-lanceolate fleshy petiolate shorter than scape, Middle lobe of lip emarginate apiculate spurless
20421 Pseudo-b broad-ovate furrowed, Leaf solitary lanceolate l boot to gon a very long petiole, Spike many-flowered bracteolate, Petals and seps lanceolate, Lip oblong 3-lobed, Middle lobe roundish short, Spur short
[entire, Spur subulate arched length of ovarium
20422 Stemless, Leaves broad-lanceolate acuminate, Sepals and petals oblong-lanceolate, Lip cucullate ventricose
20423 Stemless, Leaves oblong lanceolate acute, Sepals and petals lanceolate, Lip cucullate curled entire acuminate, Spur arched emarginate, Bracts acuminate

History, Use, Propagation, Culture,

3215. *Dignàthe* is a genus nearly allied to *Aspàsia*. It is a small epiphytal plant, with scaly 1-leaved pseudo-bulbs and green flowers spotted with yellow

3216. *Pilúmna* is a genus said to be closely allied to *Aspàsia* Its habit is that of *Trichopilia* *P laxa* has the sepals and petals of a pale watery green, tinged with purple, the lip cream-coloured, and rolled round the column which is terete, a singular fringed hood overlying the anthers (hence the name), and a nearly vertical stigma They are pseudo-bulbous epiphytes, with coriaceous leaves and radical peduncles.

20424 Bluish, Leaves ovate-lanceolate acuminate spotted, Sepals and petals oblong obtuse, Lip 3-lobed, Lobes plicately crenated at top, Lateral ones small roundish, middle one ovate obtuse, Spur straight obtuse

[tire, middle lobe crenated emarginate

20425 Pseudo-b. oblong 2-edged, Sepals linear-oblong acute, Petals obtuse concave, Lateral lobes of lip roundish en-
20426 Pseudo-b oblong 2-edged, Sepals and petals linear obtuse spreading, Lip 3-lobed, Lateral lobes short, middle one flat nearly square wavy, Flowers solitary

20427 Pseudo bulb scaly 1-leaved, Flower green, with a few yellow spots

[Sepals and petals linear-lanc , Lip oblong undivided roundish constricted in middle unilamellate in middle

20428 Pseudo-b, thin 2-edged 1-lvd, Leaf obl spotted beneath, Raceme loose many-flwd, Bracts loose cucullate obtuse,
20429 Leaf broad-oblong, Raceme 2—3-flowered, Bracts lanceolate erect obtuse, Sepals and petals oblong-lanceolate acuminate, Lip oblong apiculated somewhat 3-lobed smooth

20430 Flowers sessile, Segments of Perianth oblong-obtuse, Lip 3-lobed, Middle lobe obtuse with a glandular disk Gland wrinkled setose at base

20431 Sepals and petals obtuse fleshy, yellow spotted inside, Lip oblong spongy white wrinkled rather scabrous

20432 Leaves ovate-oblong, Raceme corymbose few-flowered, Sepals and petals ovate acute, Lip repand acute, Wings of column short obtuse, Ovarium 6-ribbed

20433 Lvs roundish-oblong coriaceous, Raceme short corymbose, Ovarium 6-winged long beaked, Lip ovate crested
20434 Pseudo b oval 1-leaved, Leaf linear, Scape terminal many-bracteate at base 1-flowered, Lip obovate acute naked gibbous at base, Wings of column fleshy blunt falcate

20435 Pseudo-bulb 1-leaved, Leaves lanceolate acuminate at both ends, Petals and sepals linear-oblong bluntish flat, Lip 3-lobed, Middle lobe obovate acute inflexed unguiculate, lateral ones acuminate

20436 Leaves ovate-lanceolate, Petals linear-lanceolate, Lip 3-lobed, Middle lobe ovate concave, Lateral ones linear-oblong reflexed hairy

[fleshy obl ac , Lip 3-lobed, Middle lobe obl spongy, Lat. segs triang ascending acum. with 2 cili warts

20437 Caulescent radicant, Lvs obl fleshy obt obliquely emarg , Ped short scaly 2-flwd supra-axillary, Seps and pets
20438 Lvs distich coriac rounded at top and obliquely 2 lobed, Spikes dense conical Dorsal seps and pets narrower lanc ac Lat. ones rounded at apex, Lip 3 lbd, Lat segs ac , mid one obl obt cornute and toothed in. disk

20439 Subcaulescent, Pseudo-b rather fusiform sulcate 2-lvd scaly at base, Lvs linear channeled convex on back, Peduncles scaly axil 1-flwd, Perianth connivent, Seps and pets ovate, Lip undivided oblong obtuse

20440 Pseudo-bulb obovate angular 2-leaved, Leaves broad linear, Scape radical 1—2-flwd, Sepals and petals oblong acute, Lip oblong 3-lobed, Lobes short involving the column, middle one acute reflexed

20441 Pseudo-bulb ovate compressed, Leaves lanceolate, Scape 1-flowered bracteate deflexed, Lateral lobes of lip oblong, middle one large much fringed ending in a saccate appendage, Spur short conical

20442 Pseudo-bulb ovate-roundish 2-edged flattened 1-leaved, Leaves broad-lanceolate coriaceous obtuse, Scape radical short, Sepals and petals narrow lanceol acuminate with revolute edges, Lip obovate-oblong 3-lobed, Lateral lobes obtuse, middle one large revolute obtuse with dentately fringed edges and a pulvinate hairy disk

20443 Pseudo-b oval flattened 1-lvd, Lvs broad longer than scape which is clothed with scale-like sheaths, Bracts hooded longer than ovarium, Sepals ovate acuminate erect, Petals ensiform smaller, Lip oblong fleshy 3-lobed, Lateral lobes short, middle lobe elongated obtuse apiculated with a spatul. callosity in disk

20444 Pseudo-b ellip compr wrinkled 1-lvd, Leaf lanc -lingulate coriac obscurely stri tapering into the compres petiole, Scape 1-flwd imbri by bracts, Pets lin -lanc , Lip 3-lobed, Lat lobes incurv , mid one spread wavy

20445 Stem short scaly, Pseudo-bulb aggregate oblong furrowed 1-leaved, Leaf lanceolate, Scape 1-flowered, Petals and sepals erect oblong obtuse, Lip erect oblong obscurely 3-lobed with a callous disk, Middle lobe bifid

20446 Pseudo-b oblong compressed leafy, Lvs oblong wavy obtuse emarginate broadly sheathed, Scp erect 1 flwd loosely sheathed one half shorter than lvs, Seps and pets narrow triangular elongate, Lip obovate obtuse 3-lbd fleshy and curled at top with one tubercle above middle

20447 Pseudo-b ov tetrag 1-lvd, Lvs obl -lanc plic Fls rad sol , Seps obl. obt spread , Pets sim. smaller, Lip fleshy ventric. 3-lobed erect, Lat lobes small ac , middle one convex outside with tabul incumb append in disk

20448 Pseudo b ov obt angular 1-lvd, Lvs lanc , Petioles channeled, Rac drooping length of radical lvs, Lip cuneate 3 lobed, Lat lobes ac crenulated in front, middle lobe 2-lobed cord cucul with 3-lbd blunt tubercle in disk

20449 Pseudo b ovate subtetrag 1-lvd , Lvs lanc acum at both ends Scpe 1-flwd with distant sheaths, Seps and pets obl obt , Lip obl 3-lobed without tubercles, Lateral segments small ac , middle ones elong emarginate

20450 Pseudo-bulb ovate-oblong compressed 1-lvd longer than scales, Lvs linear-lanceolate acute recurved, Peduncs axillary solitary scaly at base, Flws drooping, Seps ovate-lanceolate revolute, Pets ovate obtuse connivent, Lip oblong undivided ovate arched reflexed at top contracted below the apex with an oblong callosity in disk

and Miscellaneous Particulars

3217 *Ornithárrum strictulum* is a caulescent plant with distich leaves and spikes of resupinate closed flowers which are yellow and spotted inside; but the lip is white and dark purple at top. It is very nearly allied to *Ornithocharus*

2774 *Cirrhæa* The flowers of all the species have, for what is called the rostellum, a prolongation in the form of a tendril or cirrhus, hence the generic name

History, Use, Propagation, Culture,

3218. *Prominæ'a* A genus of pseudo-bulbous epiphytes separated from *Maxillària*, with 1—2-leaved bulbs and 1—2 flowered-scapes and showy yellow flowers, often spotted or streaked with purple.

3219. *Scuticària Steèlii* is an old inhabitant of our stoves. It has an articulated branched bulbless rhizoma, fan-shaped leaves, and large yellow flowers spotted with purple.

3220. *Paphinia cristàta* is a pseudo-bulbous epiphyte with few-flowered pendulous scapes and very pretty flowers white outside and faced with purple inside, and the petals are altogether purple.

3221. *Lycàste* is a genus separated from the old *Maxillària*, and consists of pseudo-bulbous epiphytes with plicate leaves, and erect, radical, one-flowered scapes The flowers of all are showy, and propped by a large spathe-like bract

9451 Pseudo-b obl. compr. 1-lvd, Lvs obl.-lanc. emarg., Rac. axil. densely aggre., Brcts cucul., Perianth bilab, Seps lin.-lanc acum keeled, Pets smaller, Lip obl. undiv recurv channelled at top with elev transv. line in mid.

9452 Pseudo-b cylind elong 2-lvd, Lvs lanc 3-ribbed, Scape erect with 2 sheaths, Rac. dense oblong, Brcts setaceous, Seps and pets linear acuminate, Lip ovate-oblong fleshy lobed on both sides and warted on the face

9453 Pseudo-b ovate tetrag. 2-lvd, Lvs thin lanc. spreading pale glaucous reticulated, Pedunc. diffuse 2-flwd, Seps and pets roundish-ovate acute spreading nearly equal, Lip oblong 3-lobed, Lateral segms erect linear oblique obtuse, middle one ovate-oblong cuculiate furnished with a fleshy flexuous transverse 1-toothed crest

9454 Pseudo-b oval tetrag. 1—2-lvd, Lvs narrow-lanc, Pedunc ascend 1-flwd terminated by a sterile pedicel, Brct ovate mucro cucul., Seps and pets obl. ac spread nearly equal, Lip obl 3 lobed, Lateral segms erect lin middle obt entire, middle one bilabiate, Upper lip fleshy short trunc 5-dentate, lower lip oblong acute

9455 Bracts broad-ovate acuminate, Middle lobe of lip ovate-oblong obtuse, Crest transverse furnished with a quadrate tridentate process, Anther incurved at apex.

9456 Plant rhizomatose, Rhizoma articulated branched bulbless, Lvs flagelliform, Flowers large yellow spotted with purple

9457 Plant pseudo-bulbous, Scapes pendulous few-flwd, Flwrs beautiful, white outside interruptedly banded with purple inside, Petals all purple

[3 lobed, Column hairy, Petals naked

9458 Lip roundish spotted with crimson, Lateral lobes short, middle one lanc acute denticulated, Appendage

9459 Bract green cucul acute length of ovary, Seps obl wavy spreading recurved at top pilose inside at base, Pets erect longer than column oblong fleshy recurved at top lobed towards the top Lip shorter oblong concave 3-lobed, Middle lobe roundish crenated pilose with a tongue-shaped appendage, Anther villous

9460 Bract green about equal to oblong-lanceolate seps, Lateral seps falcate Pets conform smaller, Lip lanceolate acuminate, Lateral segs acute, middle one ovate acum serrated, Appendage fleshy emarginate

9461 Scape shorter than lvs, Sheaths ventricose acum., Seps obl.-lanc spreading, Pets smaller obl wavy connivent, Lip cuculiate 3-lobed recurved at top, Lat segms roundish, middle one obl obt, Callosity elevated ovate

9462 Bret green cucul acute much longer than ovary, Seps obl.-lanc acute spread, Pets much shorter oval erect convol above the column reflexed at top, Lip 3 lobed, Lat lobes erect trunc, middle one longer ovate rounded deflexed. Appendages fleshy tongue-shaped, Column downy, Flower 6 inches across

9463 Sheaths distant obt cucul, Seps ovate-obl, Pets conform acute, Lip semicylind, Lat segms acuminate, middle one cuneate serrulate at apex, Appendage large concave fleshy truncate, Face of column villous

9464 Pedunc rarely 2-flwd, Sheaths distant obtuse cucul, Seps ovate-obt, Pets smaller conform, Lip shorter than seps concave 3-lobed, Lobes roundish, Middle one curled downy, Tubercle small flat, Column downy

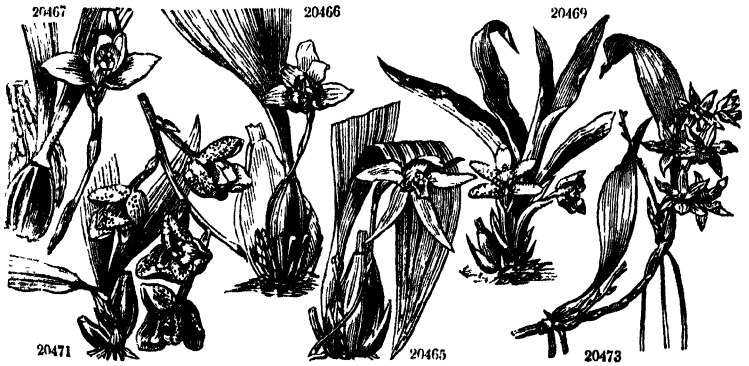
9465 Bracts green shorter than ovary, Seps lanc, Lateral ones falcate, Pets conform but a little smaller, Lip oblong, Lateral segms small acute, middle one ovate obtuse fringed with a fleshy emarginate appendage

9466 Pseudo bulb large ovate compressed Lvs numerous oblong membranous nerved, Peduncs radical solitary 1-flwd, Seps oblong-ovate drawn out a little at base, Pets smaller broadish, Lip length of pets 3-lobed with a bilamellate disk, Middle lobe oblong ovate incurved curled

9467 Upper bract cuculiate, Seps oblong flat, Pets conform, Lip 3-lobed, Lateral lobes crenulated at apex, middle one rounded serrated, Column downy, Anthers villous, Tubercle of lip elevated slightly 3-lobed

9468 Seps and pets conniving oblong roundish obtuse nearly equal, Lip short 3-lobed, Middle lobe transversely rhomboid unguiculate flat

9469 Seps linear oblong obtuse with a series of spots along the middle, Pets narrower conform spotted, Lip narrow 3-lobed downy smooth, Lateral segs short acute, middle one dilated rounded cuneate, Column lobed at top downy bisulcate towards the base



9470 Racemes erect, Hypochilum having a long blunt papillose horn

9471 Petals much smaller than seps, Lip 3 lobed, Middle segm 2-lobed, lateral ones cuneated, Column short with broad wings, Callosity of lip linear simple, Raceme pendulous

β Flowers fulvous

9472 Pets equal with seps, Callosity of lip double, Lower one linear villous, upper one subhastate tridentate at top and many-dentate at base, Lip 3-lobed, Middle segment emarginate, lateral ones scimitar-shaped, Column elongated with narrow wings, Scape pendulous

9473 Rhizoma creeping, Pseudo-b small 1-lvd, Leaf oblong 5-ribbed, Racemes erect radical shorter than leaves

and Miscellaneous Particulars.

3222 *Calax* is a genus of pseudo-bulbous epiphytes with terminal and radical plicate leaves. The peduncles are radical, erect, one-flowered, and sheathed; and the flowers are greenish.

3223 *Acanthia*. This genus is composed of subterrestrial pseudo-bulbs with much the habit of *Peristeria*, with plicate leaves and pendulous racemes of large yellow or purplish brown flowers

3224 *Aganisia*. A pretty epiphyte with creeping pseudo bulbous rhizomes. The pseudo-bulbs are 1-leaved, the scapes are erect and radical, shorter than the leaves, which are plicate. The flowers are white with a yellow lip, having a blood-coloured spot at the base.

History, Use, Propagation, Culture,

3225. *Houllètia* is a genus of splendid epiphytes. The leaves are on long petioles and the flowers are in racemes.
3226 *Stenocóryne longicórnis* is a pseudo-bulbous epiphyte, with a solitary leaf to each bulb, and radical racemes of flowers, which are of an orange colour spotted with brown
3227 *Hélcia sanguinolénta* is nearly related to *Trichopilia* and *Aspàsia*, and its culture and treatment are the same, but it differs in not having the lip united to the column, and in its deep-fringed anther bed.

20474 Lvs on long petioles, Raceme 6-flowered, Sepals oblong rounded at top as are the petals
[rounded at apex with lateral acute angles, Flwrs racemose yellow striped with chocolate colour
20475 Petals linear-lanceolate twisted at base, Lobes of hypochilum ovate obtuse straight, Epichilum rhomboid

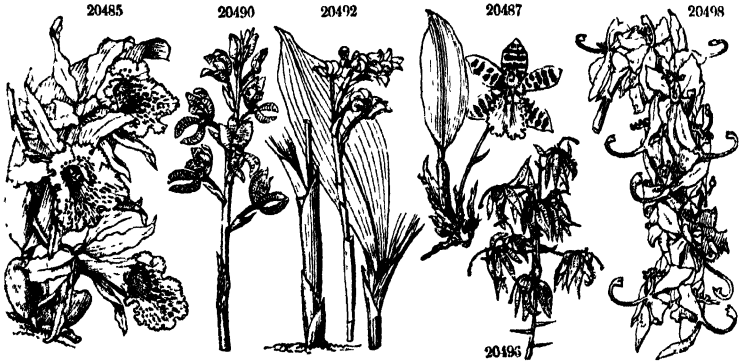
[Lip large cucullate subrepand downy inside with a downy crest
20476 Lvs long terete pendent acute sulcate, Pedicels erect sheathed 1-flwd, Seps oblong acuminate spreading uniform,
20477 Pseudo-b tetrag, Leaf obl-ac plic. curled, Ped. 1 fld, Seps obl-obt with an elevated clav horn, Pets conform wavy Lip 3-lbd cucul with rounded undu subdent edges, Mid lbe pilose Callosity of disk fleshy cun emarg
20478 Pseudo-b ovate obt tetrag 1-lvd, Lvs obl-lanc plicate, Racemes radical 3-flowered, Lip 3-lobed, Lateral lobes short diverging, middle one transverse a little 3-lobed revolute suberose, Callosity in disk tridentate in front
20479 Pseudo-b ov compressed tetrag. 1-lvd, Lvs obl-lanc 3-ribbed, Scape many-flwrd slender, Seps obl. ac., Pets lin spatul smaller, Lip obl cucul undivided undulated emarg. callous in the axis, Column downy
20480 Pseudo-b rndsh-ov ang wrinkled 1-lvd, Lvs obl.-lanc rbbd ac., Scpe rad many-flwd, Flws on long peds, Seps lanc acum, lat ones reflexed at top, Pets lin-lanc. stri, Lip ungui 3 lbd stri in mid., Mid seg lanc acum.
20481 Pseudo bulb ovate bluntly angular 1-lvd, Lvs lanceolate, Racemes drooping, Lip cuneate 3-lobed, Lateral lobes acute crenulated with a blunt 3-lobed tubercle in the disk and a downy claw

20482 Pseudo-bulb elongated tetragonal, Lvs oblong-lanceolate subplicate shining, Raceme loose many-flwd, Lateral sepals ovate acute, Pets ovate acute, Lip unguiculate spatulate 3-lobed at top downy in middle with an elevated disk, Lobes rounded

20483 Pseudo-b compr roundish, Lvs obt recurved coriac shining, Scape filiform strict sheathed, Perianth bilab, Hind sepal arched, Pets obl with revol edges, Lip 3-lobed short cil downy, Lateral lobes tooth-formed, mid lobe revol. shining in cent. furnished with reniform callosity which is obsoletely triden. in front, Col downy
20484 Lvs lin.-lanc., Sheaths acute, Seps obov., Pets obtuse, Lip tubercled on back, Anther glandularly pilose

[white dashed with pink, Lip large 2-lobed wavy curled white with rose-coloured blotches
20485 Pseudo-bulb slender obcordate, Pedunc 2-flwd, Lvs broad-oblong coriaceous wavy, Pets linear not twisted
20486 Pseudo-b narrow compressed furrowed, Lvs lanceolate flat slightly cordate, Pets twisted yellow, Lip even flat carmine with a white border

20487 Pseudo-b ovate elongated, Lvs 4—6 inches wavy narrowed into a channeled petiole, Peduncs shorter than bulbs 1-flwd bibracteate, Seps and pets olive spotted with blood colour, Lip white striped with blood colour obovate emarginate with yellow denticulated striated appendages



20488 Flws lateral usually solitary, Lip 3-lobed, Lateral lobes scimitar-shaped erect callous in middle, middle segment obovate denticulate with a villous keel, Column glabrous mutic running into the lip at base

20489 Caulescent, Lvs distich coriaceous, Peduncles many-flowered lateral erect

[oblong apiculated smooth inside, Anther with an inflexed mucrone
20490 Spike elongated cylindrical, Bracts equal to ovarium, Seps narrow acute, Pets obovate-lanceolate broader, Lip
20491 Pseudo-b ovate enclosed in a large membranous oblong pellucid striated sheath, Lvs twin broad-oblong plicate, Rac elongated many-flwd, Seps and pets curved acuminate, Lip oblong-ovate acute
20492 Scape bluntly tetragonal sheathed in middle, Raceme elongated, Flws retracted after florescence, Bracts oblong green, Seps and pets ovate bluntish, Lip ovate acute naked marked with 5 marginal spots and 2 convergent convex lines in middle, Anther horned
20493 Rac ascending 2 feet many-flwd, Lip 3-lobed bearded at base, Lateral segments erect triangular acuminate equal sided, Middle lobe rhomb-lanceolate acuminate, Ovarium hairy
20494 Raceme very long many-flwd, Lip linear-lanceolate, Hypochilum lin, Metachilum horned at base pinnatifidly margined with terete bent glands [cesses, Column slender very long
20495 Rac very long pendulous, Seps and pets membranac. recurved, Disk of lip roundish broken into clavate pro-
b Flowers pale green

[segments linear ascending, middle one bearded at base tongue-formed at apex
20496 Rac loose, Brcts subulate, Seps lin-lanc acute, Dorsal one refracted, Pets lin, Lip membr hastate, Lateral
20497 Lvs coriaceous glaucous beneath, Rac many-flwd pendulous, Ovarium tomentose, Seps oblong acute, Pets smaller lanceolate narrow at base, Lip flat 3-lobed tomentose in middle, Middle lobe thicker acute
20498 Rac long pendulous compact, Seps lanc. flat, Pets similar rolled backward, Lip unguiculate ov ac. with round disk the end of which is broken off into short curved processes forked at the point, Column length of lip
20499 Seps and pets lanceolate reflexed, Lip unguiculate, Hypochilum with an incurved horn, Metachilum 4-lobed

20500 Pseudo-b ovate 2-lvd, Lvs oblong narrowed at base equal to raceme, Ovarium 6-winged equal to striated oblong acute deciduous bracts, Lip saccate cordate dilated at top retuse with a tooth between bicallous inside, Column truncate denticulate with tooth-formed angles in front

and Miscellaneous Particulars.

20501 *Trichoglóttis pállens* A small epiphyte with yellowish green flowers spotted with brown.
20502 *Wailesia picta* is a pretty epiphyte with painted flowers
20503 *Dendrochilum* Small epiphytes of little beauty, with two-leaved bulbs, and racemes of flowers.

History, Use, Propagation, Culture,

3231. *Cleisomèria.* A small woolly epiphyte of little beauty

20501 Pseudo-b conical, Scape filiform terminal elong., Rac. many-flwd, Rachis flexuous angular, Brcts paleaceous convolute, Pets obovate, Lip cuneate-roundish auricled at base, Appendages of column subulate glabrous
20502 Leaves oblong-lanceolate coriaceous 3-nerved, Pedunes elongated with a long spike at top, Lip smooth, Lobes linear-lanceolate acuminate ciliate, Segments shorter than the toothed column

20503 Lvs broad bluntly 2-lobed, Racemes dense branched much longer than lvs, Bracts ovate concave reflexed, Rachis and ovaria woolly

20504 Seps and pets conniving, Lip fleshy galeate inflexed at base with an entire or serrate margin

20505 Seps and pets ov. conniving, Lip fleshy galeate roundish compressed apiculated undivided with serrate margin
20506 Lvs oblong-lanceolate many-plicate longer than compact raceme, Perianth spreading a little, Lip galeate incurved at apex with denticulated sides
20507 Spike elong many-flwd, Perianth globose, Seps and pets conform ov ac concave imbricate, Lip glob. denticu
20508 Lvs very long grassy, Rac. cylind. pend many-flwd, Seps ovate-roundish conform to the pets, Lip urceol truncate apiculate waxy inside, fringed on the margin [roundish reflexed thick and denticulate
20509 Raceme decurved, Seps and pets spread ovate acute, Lip fleshy cucul with a thin pectinate margin, the apex
20510 Rac large, Lip membr infl in front contract at mouth the inner margin drawn out undu and fringed-crested in disk, Pseudo-b large elliptical, Lvs broad lanc [dent plate along the cent. which is 2-lbd at base, Col. tendr
20511 Lip lanc sac at base margins incurved at top and fringed towards the base, furnished with a fleshy ent. or
β Lip, column, and pets spotted with purplish brown
γ Lip ivory-coloured spotless like the column and petals
20512 Petals serrated towards the top, Lip saccate beneath the middle fringed with long succulent white slender hairs attenuated and recurved at top with a tripartite spine above at base, Spine large toothed
20513 Seps lanc spread. dorsal one and pets arched, Lip rndsh abruptly acum. fringed sac. in middle, Col cirrhate
20514 Spike short erect, Seps oblong-lanceolate complicate equal to lanceolate ascending pets, Lip hemispheric drawn out into an abrupt ovate fleshy blunt appendage at apex lacerated at base
20515 Seps and pets spread oval flat, Lip broad-ov acum obt subcord. concave fringed smooth at top, Column short
20516 Pets linear-lanceolate same form as dorsal sep, Lip ovate-oblong obtuse saccate towards the base crenated and furnished above the sac with a large orange-coloured callosity, Column acuminate
20517 Lip beardless sagittately triangular, Angles roundish behind and toothed callous and dilated at top with the margin recurved and tuberculated at base
20518 Pets spotted linear-lanc, Lip subcordate ovate saccate towards the base furnished with a strong inflexed horn under the sac, Column cirrhate [horn under the sac, Column cirrhate
20519 Pets spotted linear-lanceolate, Lip subcordate-ovate fringed saccate towards the base furnished with triparted
20520 Lvs obl.-lanc, Perianth ovate compressed connivent, Seps and pets acum, Lip subconical cucullate contracted at mouth entire, Anther hemispherical compressed umbonate, Umbo bearing scales beneath
20521 Lip triangular very acute concavely hemispherical not ventricose, downy inside ciliated with long hairs on the margin at base [tracted entire ciliated mouth
20522 Lvs oblong acute, Seps spreading, Pets ovate acute concave, Lip subconically saccate cucullate with a con-
20523 Raceme drooping many-flwd, Seps and pets linear acuminate, Lateral ones longer, Lip flat cordate membranous toothed or fringed saccate at base conical, Teeth of disk prominent [Pendril short
20524 Seps and pets ovate secund, Lip cucullate entire smooth contracted into a short broad blunt fleshy beak at apex,
20525 Lip fleshy galeate resupinate rather compressed saccate behind entire and emarg at top sharply denticulate at the sides, Pendrils hardly longer than column
20526 Racemes short dense pend, Seps and pets rndsh spreading incurved, Lip galeate compressed at base and ventri. at top with membr flat lobes, Lat ones small and ser, middle one 2-lbd with divaric fringed segs, Col mutic [lanceolate acute conniving, Lip 3-lobed, Lateral lobes acute, middle one elongate acuminate
20527 Pseudo-b turbinate, Lvs strict, Raceme nutant many-flwd shorter than lvs, Seps and pets nearly equal ovate-
β Flowers yellow without any purple spots
20528 Pseudo-b elong terete articulate streaked 2—3-lvd, Lvs lin-lanc acum, Raceme elong many-flwd, Seps and pets spread unif obl-lanc ac, Lip obl. narrowed at base unident on both sides beneath mid. with refl. edges
20529 Rac short erect, Seps and pets roundish-ov ac conc, Lip narrow cun convex, Mid. seg. triang acum cucul
20530 Lvs very long narrow glauc beneath much longer than rac, Raceme obl., Seps ovate lanc, Pets concave fleshy incurved with scarious edges, Lip concave slightly 3-lobed apiculate cucullate above the column
20531 Seps linear-oblong, Lateral ones reflexed, dorsal ones and pets oval-lanceolate erect, Lip unguiculate fleshy roundish cuneate apiculate emarginate on both sides with the edges turned over in form of a shell
20532 Seps and pets oblong linear abruptly acute with reflexed edges, Lip linear incurved fleshy sparingly pilose with a short tooth towards the base on both sides, Back and margin of column downy
20533 Pseudo-b. obl, Lvs lanc. striated, Scape racemose, Flws remote pendulous dotted with brown, Seps reflexed oblong acute with revolute edges, Pets same form, Lip obovate with revolute edges, Column twisted
20534 Raceme long many-flwd, Seps reflexed, Pets ascending lanceolate flat acute, Lip stalked fleshy elliptic with a distinct point rolled back on the sides scarcely angular
20535 Pseudo-bulb elongate articulate sheathed leafy at top, Peduncs taller than bulbs, Flws yellowish erect pedicellate, Seps and pets linear-lanceolate, Lip obovate apiculate entire, Column twisted
[obtuse striped with purple, Rhizoma tufted bulbless
20536 Lvs oblong coriaceous pale green twisted conduplicate acute recurved, Raceme radical branched, Pets obovate

and Miscellaneous Particulars

3232. *Scelochilus* has much the structure of an *Oncidium*, with broad leaves and spikes of yellow flowers.

History, Use, Propagation, Culture,

3233. *Clowèsia* is like *Catasètum* in habit, and requires the same culture and treatment.

2789. *Angulòa* is a genus of splendid epiphytes which will grow in a compost of peat and rotten wood, in baskets or pots, and they may be tied on blocks of wood

2790. *Peristèria* is a splendid genus of pseudo-bulbous epiphytes They grow well in a mixture of turfy peat and rotten wood. They require plenty of pot-room, heat, and water

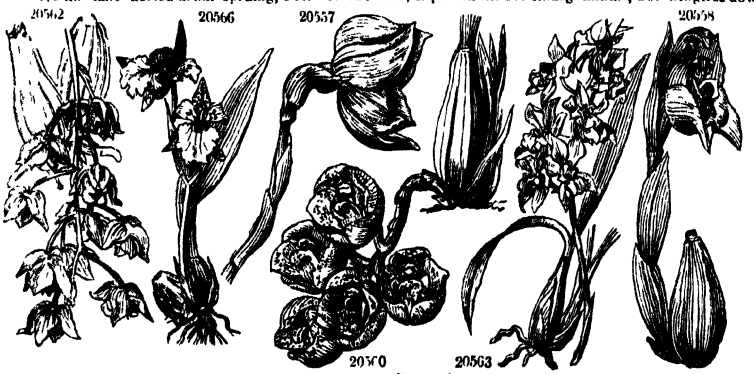
3234. *Lacæ'na* is a pretty pseudo-bulbous epiphyte, and it may be grown in a basket, or tied to a block of wood and suspended to a rafter in a moist stove It requires an ample supply of water and heat

20537 Lip without any horns, Flws in pairs [inside with 3 straight horns shorter than lip
20538 Ovary much longer than bracts, Pets fleshy oval convex obliquely ovate-acute, Hypochilum roundish glandular
20539 Bracts about equal to ovarium, Lip unguiculate with a roundish limb, Horns slender, Column winged
[dentate, Column downy with margins a little dilated
20540 Lip constricted in middle, Hypochilum short sessile with cirrhose horns at top, Epichilum oblong-linear tri
8 Flowers white spotted with crimson
20541 Spike contracted, Bracts broad-obl , Lateral seps ov -obl , Hypochilum short saccate bidentate in front, Epichilum roundish-ovate entire longer than incurved horns Wings of column hardly evident [winged
20542 Brcts acum shorter than ova Hypoch obl sess cleft, Epich rndsh ov ent , Horns talc incurved Col broadly
20543 Hypoch compressed sac bident , Epich roundish-ov ent , Horns acum incurved, Column with broad wings
20544 Lip a little contracted in mid . Hypoch gibbous beneath gland. inside, Epich 3-lobed, Middle lobe short, Horns lanc incurved equal, Column glab narrowly marginate [Horns incurv , Column broadly winged
20545 Brcts acum shorter than ovarium, Hypoch open obov sess with inflexed tooth Epich roundish-ovate entire,
20546 Hypochilum subglobose gibbous in front equal to epichilum which is ovate entire or slightly tridentate, Horns falcate incurved equal, Column marginate
20547 Pedums 1-flwd Bracts spathaceous imbricate, Pets ovate acute reflexed much shorter than the obtuse sepals, Column wingless cirrhate, Lateral horns of lip short fleshy

20548 Pseudo-bulb fleshy leafy, Scapes radical many-flwd erect shorter than leaves

[brown and a few large clear distinct blotches of the same colour on the seps, the lip itself is white
8 The ground colour of the flower except the lip is yellow the column and pets are delicately streaked with rich
20549 Hypochilum convex longer than awns with the lateral horns papilioform, Epichilum acute triangular
3 Flowers pale purplish, Lip white with a yellowish apex [ovate Pseudo-b furrowed, Lvs plicate petiolate
20550 Hypochilum convex having the lateral horns elongate and capitate with setaceous awns, Epichilum acumi-
3 Flowers pure yellow
20551 Lateral seps roundish obl uppermost one obov apiculated keeled, Pets small ov ac decurrent 5-nerved, Lip varnished, Hypochilum compressed in the middle 2-horned at apex, Epichilum ovate channeled
20552 Three exterior petals with reflexed margins, Lip about 7-toothed at apex, Leaves ovate-lanceolate subplicate

[galeate rather quadrate and roundish Lateral lobes minute, middle one truncate erect
20553 Hypochilum stipitate convex subcompressed tomentose at base, Mesochilum plicate and warted, Epichilum
20554 Pets approximate, Lip saccate with a large stalked galeate appendage, Column bidentate at base



3 Flowers white
20555 Leaves narrow lanceolate, Pseudo-bulb ovate-conical deeply furrowed, Lip with 4 deflexed plicæ

[conniving into a globe, Lip 3-lobed Lateral lobes obl , middle one pilose funnel-shaped bilabiate
6 Peduncle 1-flwd radical sheathed by imbricate inflated scales, Seps roundish apiculated and with the obtuse pets
20556 7 Pedunc 1-flwd radical loosely scaled, Flwr fleshy resupinate, Sepals and petals ovate convex conniving, Lip 3-lbd, Middle lobe pilose funnel-shaped bilabiate
Flowers yellowish Middle lobe of lip orange-coloured
20557 8 Pedunc 1-flwd rad cal sheathed by 2 inflated scales, Flwr a little longer than spathe-like bract, Seps and pets acu-
3 Flowers rose-coloured [minate, Lip glab 3-lobed, Middle lobe narrow reflexed, lateral ones rounded

[Lobes obtuse 1-toothed on disk longer than column
20558 Scape erect tall, Raceme loose elongated Epichilum roundish serrulated callous in middle, Hypochilum large,
20559 Scape short pendulous, Raceme dense Epichilum roundish entire bilamellate above, Hypochilum elongated, Lobes roundish with a large lunate callosity in middle, Column 2-horned, Rostellum truncate
20560 Raceme short dense pendulous, Epichilum rhomboid-oblong serrulated warted, Hypochilum short, Lobes acute, Column mutic, Rostellum short

20562 Habit of *Peristèria*, Racemes long drooping, Flowers pale yellow spotted with dark purple

[Pets obov ac a little undulate, Lip 3-lbd, Lat segm triang , middle one obl , Wings of column jagged
20563 Pseudo-bulb oblong comp 2-leaved, Lvs linear emarginate, Scape 2-edged, Raceme 6—7 flwd, Seps ovate acute,
20564 Like *L. pulchellum* but the flowers are smaller, the Lip is acute and excavated behind
20565 Pseudo-bulb roundish comp smooth 1-lvd, Leaf obl -ligul obt shorter than rac , Seps and pets obl obt nearly equal Lip ungue remf with 2 tubercs at base Lat wings of col rather trunc , dors ones roundish dentic
20566 Pseudo-b ov tuitd 2-edged 1 lvd, Lvs obl -lanc longer than radical 2-flwd scape, Bracts membr keeled acum , Seps lin -lanc keeled acum spreading, Pets obl obt rev , Lip roundish ov emarg undul , Col wingless downy

and Miscellaneous Particulars

20567 *Odontoglóssum* is composed of pseudo-bulbous epiphytes, and forms three different sections or *forms*. In one the anther bed is surrounded by a deep fringe or membranous border. The other two are without any fringe, these form the subgenus *Trymènium*. In the second the lip is white, and generally broad and flat In the third the lip is generally yellow, never white, and generally narrow. They will all grow among free turfy peat or rotten wood or they may be tied to blocks of wood.

20567 Pseudo-bulb ovate angular 1-leaved, Leaf oblong, Petiole channeled Scape few-flowered, Bracts and sheaths membranous acute, Sepals oblong lanceolate acute, Petals broader subunguiculate acute, Lip subcordate ovate acute unguiculate, Claw fleshy cup-shaped downy, Auricles of column rounded

20568 Habit of *O. Cervantesii*, Sepals unguiculate lanceolate, Petals broader oblong obtuse, Lip cordate very blunt unguic, Claw fleshy cup-shaped downy bidentate in front tuberculate in middle, Auricles of column rounded

20569 Pseudo-bulb ovate compressed 1-leaved, Leaf lanceolate recurved, Scape 2-flowered, Bracts as high as triquetrous ovarium, Sepals and petals equal linear acuminate, Lip rhomboid toothed, Appendage trunc 4-toothed

20570 Panicle loose leafy at base, Sepals and petals expanded linear-lanceolate acuminate, Lip constricted in middle, Hypoch obl Epich rather fiddle-shaped cusp ser furnished with 2 ser lamellæ at base, Col subcurrhose

20571 Pseudo-bulb oblong comp 1-leaved, Raceme 2—6-flowered length of leaf, Sepals linear-lanceolate acute, Pets thin obl wavy, Lip cord obt curled, Crest spoon-shaped fleshy blunt in front bident in middle, Col. narrow

20572 Pseudo bulb obl comp 2-lvd, Lvs broad-obl. flat acute, Scape sheathed with keeled scales, Rac. short distich, Bracts boat shaped acum, Lip cord acum entire with a 2-lobed append at base Col downy clav wingless

20573 Seps lanc, Lateral ones convex falcate, Pets obl obt subundulate, Lip roundish auricled at base much shorter than seps with 3 tubercs at base and tooth-formed lat wing, Col tom with rounded conv. incurv. margins
5 Lip white

20574 Pseudo-bulb oblong compressed 1-leaved, Leaf oblong nerved acutish, Racemes pendulous many-flowered longer than leaves, Bracts boat-shaped shorter than ovary, Sepals linear lanceolate acuminate, Petals oblong wavy acum, Lip cord. acum subcrenated, Appendage of claw conic shell shaped serrul, Col downy wingless

20575 Pseudo-bulb ovate 2-lvd subc, Lvs lorate flat, Panicle erect diffuse many-flwd, Bracts minute, Seps ovate-obl wavy, Pets broader comf Lip cord obl cusp rather fiddle-shpd deutic at base, Col with short jaggy wings

20576 Lvs oblong coriac, Branches of panicle spicate, Bracts boat shaped acum, Seps and pets narrow lanc -acum wavy Lip roundish ov ac with lanc auricls at base and 5 elevated lamellæ, Col downy with obsolete wings

20577 Pseudo-bulb comp furrowed, Lvs obl -ensif obt oblique at apex, Flws panicled, Bracts loose, Seps and pets obl -lin acute flat, Lip fiddle-shaped apic with a smooth bidentate claw, Wings of column rounded curled

20578 Pseudo-bulb ovate 2-edged rather angular elongated and 2-leaved at top, Leaves spreading linear-lanceolate shorter than few-flowered raceme, Bracts small, Sepals oval spreading, Pets narrower obt ascending, Lip 3-lobed flat, Mid lobe cuneate 2-lobed, lat ones square with a single tubercle on disk, Col along wingless
11 purplish [Seps and pets subequ lin -lanc sptd, Lip with bilam. claw and cord acum lam, Wings of col ent.

20579 Pseudo-bulb obl -comp 2—3-lvd, Lvs ensif. wavy spread longer than rac scpe, Bracts lanc -acum. shorter than ovy,
5 Lip white

20580 Pseudo-bulb ribbed, Lvs thin lanc nar at base, Panic diffuse Seps and pets narrow ovate-lanc acum. wavy, Lip conf scarcely hastate, Teeth of crest 2 large somewhat 4-lobed down, Processes of col subul spreading

20581 Pseudo-bulb comp atten towards apex, Lvs 2 oblong obliquely rounded at apex, Raceme 2-edged 1-flowered barticulate, Sepals and petals lanceolate obtuse recurved, Lip rhomb-ovate with a bidentate appendage

20582 Lvs ensif strl obliquely bident at apex, Rac short pend, Bracts small scape-frnd, Seps and pets lin, Lip 3-lbd sacc at base downy inside, Lat segm acute, middle obl wavy obt with nearly straight lamellæ in middle

20583 Leaves narrow ensiform, Raceme 2 flowered decumbent furnished with long acute scales, Sepals oblong-lanceolate fleshy acute wavy, Lip 3-lobed, Middle lobe triangular curled lateral ones rounded

20584 Lvs ov -lanc coriac 1 foot long their bases covering the pseudo-bulbs, the midrib strong, Scape pend 1 to 1½ foot many-flwd with large sheathg bracts, Seps ov -lanc. ac Pets broader, Lip ov bluntish purplish crimson

20585 Leaves long linear, Racemes many-flowered bracteate Perianth spreading, outer 3 segments obtuse, Lip 3-lobed, Middle lobe tongue-shaped glandularly dotted shining

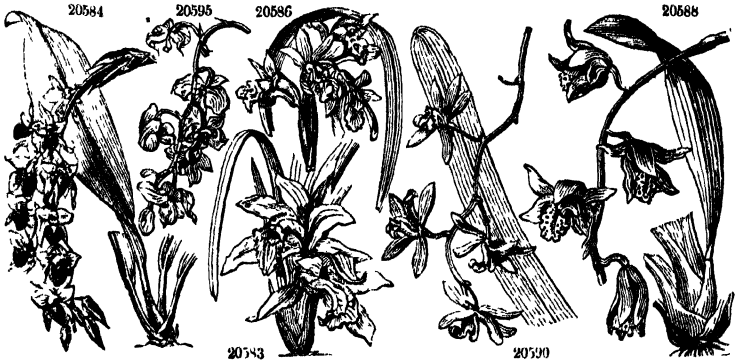
20586 Lvs ensif obt, Scape erect with imbr acute scales, Spike few-flwd, Seps and pets lin -obl acute, Lip obov 3-lobed downy inside with confluent lamellæ, Middle segment oblong wavy, lateral ones rounded flat

20587 Leaves ensiform channeled at base, Racemes pendulous, Sepals oval obtuse apiculated spreading, Petals conform erect, Lip naked oblong, Lateral lobes small, middle one oblong obtuse narrowed a little at base

20588 Leaves narrow-strap-shaped thick distich, Scape nutant covered with imbricate scales, Sepals oblong, Petals linear-lanceolate, Lip oblong folded 3-lobed, Middle lobe ciliated

20589 Leaves ensiform obtuse recurved, Raceme erect, Bracts very minute, Sepals and petals obtuse, Lip downy at base retuse and emarginate at top, Lateral segments short triangular with distant arched warted lamellæ

20590 Leaves ensiform coriaceous obliquely-obtuse, Racemes pendulous many-flowered Bracts minute, Petals and sepals lin -obl obt, Lip 3-lobed, Lateral lobes acute, middle one oblong apiculated with confluent lamellæ
7 Lip broader, Lateral lobes more acute, middle one roundish-oblong



20591 Leaves linear-lanceolate coriaceous erectly-recurved, Scape 1 flowered slender shorter than leaves, Sepals oblong lanceolate, Pets smaller conform, Lip oblong-lanceolate obtuse cuculate subrepand undivided, Pseudo-bulb ovate-oblong 1—3-lvd

20592 Petals oblong obliquely-rhomboid rounded at top disposed into a galea along with the shorter dorsal sepal, Lateral sepals deflexed connate at base, Lip tripartite, Lateral segments linear, middle one cuneate-truncate with a toothed disk warted from shining tubercles
[leate, Lip unguiculate saccate with a very long horn at apex

20593 Pseudo-b tufted ovate 2-lvd, Leaves oblong 3—4 ribbed, Raceme basilar pendulous purplish 16—20-flwd brac-
[Bracts membranous lanceolate, Upper sepal galeate, Ovary furrowed scabrous

20594 Pseudo-bulb ovate 2-leaved tapering to apex, Leaves oblong 3—5-ribbed acuminate, Racemes pendulous,

20595 Raceme loose many-flowered, Sepals apiculated, Lateral ones oblique rounded at apex, Petals free shorter than column, Lip fleshy free ovate acuminate furnished with a tuberculate crest at base below
5 Flowers citron-coloured

History, Use, Propagation, Culture,

3236. *Ansèllia africàna.* This plant was first discovered by Mr Ansell growing on the oily palm, *Elæ'is guineènsis*, at Fernando Po; but, although it is epiphyte in its native country, it will succeed very well in a pot filled with turfy heath mould. It requires plenty of water while growing. A moist atmosphere is necessary at all times.

[Middle lobe oblong rounded, lateral ones erect subfalcate with 4 elevated lamellæ in middle

20596 Rac long many-flwd, Bracts obl. scale formed, Seps obl. obt, Pets similar acute narrower, Lip 3-lobed downy,
β Flowers yellow spotted with purple

20597 Stems tall terete leafy at top, Leaves plicate cortaceous, Panicles terminal

20598 Caulescent bulbless, Leaves distich oblong-linear emarginate, Spike terminal distich flexuous many-flowered on a long peduncle, Bracts short stiff tooth-formed

[upper ones scale-formed and green, Flowers sessile, Lip rhomboid-oblong glabrous

20599 Stem and plicate leaves covered with black pubescence, Leaves sessile oblong lanceolate acuminate, the 2
20600 Stem short, Leaves broad few terminal elliptic-ovate bluntish striated long-sheathed, Lower one the largest, upper ones bract-formed, Flowers large solitary sessile terminal, Petals and sepals equal conniving Lanceolate, Lip obovate striated on disk wavy on margins elevated on disk, Column with short lateral lobes

20601 Lvs plicate ovate acuminate rayed, Flws large 7—8 in. diam, Seps lanceolate spreading acuminate, Pets oblong,
β Flowers large deep rich crimson purple [Lip emarginate flat smooth

[culate at apex fleshy on both sides at base with truncate emarginate inflexed teeth

20602 Pets triangular, Lip 3-lobed Lateral lobes truncate, intermediate lobe constricted in middle ovate and tuber-
20603 Lateral lobes of lip acute with 3 denticulated fleshy lamellæ
20604 Lateral lobes of lip rounded cuneated, middle one ovate rather scabrous with 2 lamellæ which are concave at base

20605 Leaves broad ensiform 5-nerved, Spike many-flowered, Lower flowers more remote, Bracts ovate acuminate shorter than the acute-angled ovary, Lip oblong 3-lobed, Segments roundish, Middle segment curled emarginate naked with many parallel elevated veins, Spur short

20606 Lvs lin-lanc much shorter than racemose scape, Bracts small subul, Seps lin-spatul obt recurved, Pets a little broader, Lip 3 parted callous at base, Lateral lobes obtuse recurv, middle obcord, Spur cylind. obtuse

20607 Lvs obl plic acum at both ends, Scape simp rad, Seps lin-lanc acum, Pets similar wavy, Lip suborb 3-lbd, Lat lbs nearly equal to the middle one which is short 2-lbd with 2 short lam at base Spur round infla obt.

20608 Leaves strict ensiform plicate, Scape radical sheathed Racemes capitate, Lip 3-lobed, Middle lobe longest bicrded, Spur straight conical short, Bracts membranous veiny

20609 Stem simple Lvs lanc 3-nrvd, Corymb term, panic nutant shorter than lvs, Pedunc sheathed with lin-lanc. memb scales, Seps and pets lin-obl acutish, Lip large emarg in front apicul. crenul, Spur equal to ovary

20610 Stem simple, Lvs lanc 3-nerved, Racs sessile many-flwd, Lip ovate obtuse crenulated, Anther crested fleshy

20611 Sepals and petals linear-lanceolate reflexed, Lip convolute with curled margins downy inside bicarinate at base, Spur acuminate horizontal, Anther furnished with an unguiculate rhomboid crest

20612 Leaves lanceolate striated, Scape very long, Raceme elongated loose simple, Sepals and petals linear-lanceolate, Lip stipitate oblong acute with 2 fleshy lamellæ at base, Middle lobe ovate wavy acuminate

20613 Leaves small grassy much shorter than 7—8-flwd racemose scape, Lip roundish concave constricted in middle and lunate at top bituberculate in middle [oblong obtuse villous with an emarginate callosity

20614 Leaves broader, Racemes equal or longer, Sepals oblong acuminate, Petals shorter narrower, Lip narrow

20615 Leaves obovate-oblong longer than 1-flowered peduncles, Sepals and petals ovate-lanceolate conniving, lower ones larger, Lip cochleate roundish 2-lobed velvety, Crest arched crenated, Anther crestless

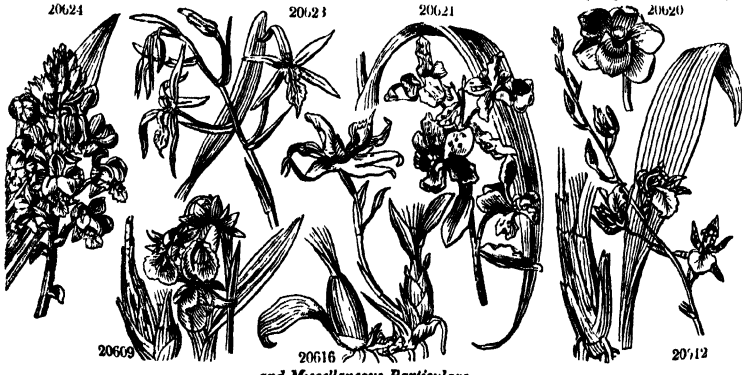
20616 Leaves broad-lanceolate spreading longer than few-flowered scape, Sepals and petals linear-lanceolate wavy acum, Lip roundish ovate with a lunate crest callus at base, Col cucul and toothed at top, Anth rostrate

20617 Leaves ensiform shorter than raceme, Sepals and petals oblong acute, Lip roundish wavy narrow at base broadly 2-lobed downy with a crenulated undivided callosity

20618 Leaves broad-lanceolate, Bracts cucullate, Sepals and petals linear-lanceolate acute, Lip obovate emarginate narrowed at base with villous veins and a narrow incurved emarginate callosity

20619 Stemless, Lvs embracing each other at base erect acute slightly plicate, Peduncles axillary 1-flowered pendulous, Sepals and petals oblong obtuse curled at edge, Lip kidney-shaped emarginate, Column large fleshy

20620 Sepals roundish conc, Lip ovate convex retuse, Crest thick semicircular truncate plicate, Column naked at top



20621 Leaves lanceolate plicate, Sheaths large loose membranous, Sepals and petals undulated acute spotted, Lateral lobes of lip cuneate, middle one roundish papillose

20622 Raceme many-flowered, Bracts ovate-oblong membranous, Sepals and petals oblong bluntish, Lip sessile cordate-roundish with thin plicate edge, Lat lobes scimitar-shaped erect, Crest pulvinate with 5 series of warts

20623 Lvs linear ensiform twin equal to scape, Scape compressed closely sheathed, Racemes many-flowered, Bracts glumaceous yellowish, Flws nearly equal, Lip ses ov lanc repandly curled downy at base inappendiculate

[obl apic, Lip 3-lobed, Lobes roundish, middle one emarg with a muc and 3 undu serru lamellæ in disk

20624 Lvs broad-lanc pli, Scape sheathed with lanc. distant bracts, Rac dense bract, Seps spat conc. reflxd, Pets

and Miscellaneous Particulars.

20625 Lvs linear-lanceolate nerved, Scape simple, Sepals oblong-obtuse, Petals twice the size twisted at base, Middle lobe of lip roundish emarginate, Spur short conical

[lobed, Petals linear straight acute

20626 Lip unguiculate ovate-rhomboid acuminate deflexed on both sides at base, Sepals revolute at top, lower one 2-

20627 Lip rhom keeled at base dwny as is the col., Lat. seps conn at base, Racs longer than lvs, Lvs obl. wavy rather concave

[sides at back, Pets obov mucron, Lip 3-lobed Lat Lobes triangular, middle ovate ciliated

20628 Leaf oblong emarginate longer than petiole, Flowers aggregate, Sepals keeled connate at top and free on both

20629 Leaf fleshy spatulate obtuse tridentate longer than 1-flowered scape, Flowers bilabiate, Lateral sepals oblong acuminate, Petals truncate 1-toothed beneath the middle, Lip ovate-oblong smooth with 2 elevated lines

20630 Leaves obovate-oblong narrowed into petioles, Scape angular 1-flowered, Sepals ovate erect equal ending each in a long bristle, Petals truncate rather fleshy bluntly tridendate rhomboid serrulated

20631 Pseudo-bulb ovate elongated compressed 2-leaved, Leaves oblong-lanceolate undulated, Raceme long dense nutant, Sepals all free undulately curled as are the petals Lip sigmoid lanceolate bicristate

20632 Pseudo-b compressed oval, Lvs lanc channeled acute, Rac. secund shorter than leaves, Upper sepal arched, lower one bident., Pets ov. obt, Lip cared near base bilam. in disk cun and emarg at top, Col woolly at base

20633 Ps-bulb oblong compressed leafy at base and apex, Scape many-flwd, Lip ovate reflexed bituberculate

[rium, Lip recurved obsoletely bicristate, Front sepal narrow cuneate bifid

20634 Pseudo-bulb 2-edged oval, Leaves linear-lanceolate acute, Racemes loose drooping, Bracts about equal to ova-

20635 Pseudo bulb compressed 2-edged oblong, Leaves linear-lanceolate smooth, Racemes droop ng, Perianth wavy, Lower sepal formed of 2, nearly bifid to the middle with spreading segments, Lip entire at top

[arranged

20636 Column smooth, Lip in no degree hastate with many shallow ridges on each side near the base, Flowers loosely

20637 Lvs coriaceous keeled at top mucronate, Racemes dense pendulous, Lip obovate 2-lobed slightly hastate, Lamellæ of crest 3 on both sides, Col downy with 2 minute subulate white wings and 2 oblong-linear ones

20638 Leaves ovate-lanceolate rigid articulated to the petiole the rest without a petiole, Scapes bearing an umbel-like raceme of large drooping white flowers tinged with pink

20639 Raceme pendulous, Anterior sepal emarginate, upper one and petals ovate-oblong wavy denticulated lacerated towards the claw, Leaves linear-lanceolate

20640 Pseudo-bulb 1-lvd compressed, Leaf lanceolate wavy, Raceme 3—5-flowered, Sepals and petals connivng, Lip large 2-lobed dilated with a downy lacerated appendage at base, Spur short conical

20641 Lvs sessile, Racemes pendulous loose few-flwd, Lip roundish-oblong furnished with plates, Spur short subulate

[transverse emarg narrower, Disk downy pulvinate, Stigma mutic, Wings of column semilunate entire

20642 Pseudo-b roundish 2-edged compressed, Lvs oval apicul fleshy, Pan divaricate, Lip acuminate, Middle lobe

20643 Pseudo-b cylindrical 1 leaved, Leaf lanc nerved, Panicle simple many-flwd subsecund, Seps t fasciate, Lower one spotted bidentate, Lip fiddle-shaped, Lateral lobes narrow, Crest 2-horned, Wings of column lin obt

20644 Pseudo-bulb roundish compressed, Leaves flat oblong lanceolate, Scape erect branched at top, Sepals all free, Lip 2-lobed roundish transverse, Lateral segments very short, Base of callosity 3-lobed, Lateral lobes spreading flat truncate, middle one terete, Wings of column cuneate toothed reflexed

20645 Pseudo-b terete 2 leaved, Lvs broad ensiform, Flower stem partly climbing branched, each branch 4—6-flwd

20646 Flws panicled Lateral sepals free obtuse, Lip roundish 2-lobed wavy auricled at base, Crest 5-lobed tuberculed, Wings of column small truncate, Anther downy

20647 Pseudo-bulb oblong furrowed 1-leaved, Leaves oval acute sessile shorter than decumbent few-flowered simple scape, Upper sepal as petals obovate concave wavy obtuse, lower ones smaller narrower and connate at base, Lat lobes of lip linear, middle one obovate repand wavy, Crest warted, Wings of column linear obtuse

20648 Pseudo-bulb ovate compressed 1-leaved, Lvs complicate linear-oblong much shorter than erect flexuous few-flowered scape, Sepals lanceolate oblong wavy obtuse, anterior one 2 lobed, Petals obovate and curled, Lip tripartite segments obovate and sinuses broad and fringed, Crest 5-horned, Wings of col ovate acute

20649 Pseudo-bulb oblong compressed, Leaves ensiform stiff shorter than simple scape, Sepals and petals length of lip linear-oblong wavy, Lip cordate arched inwardly on both sides dilated and rather reniform at apex, Crest of 8 tubercles downy, Wings of column small, Stigma orbicular

20650 Leaves acutely triquetrous keeled subfalcate entire, Scape many-flowered drooping, Sepals boat-shaped acuminate, lateral ones connate, Petals ovate wavy acute, Lip 3-lobed, Lateral lobes roundish, middle one roundish sessile retuse or emarginate, Crest 5-lobed, Wings of column scimitar-shaped

20651 Lvs radical terete subu, Scape panicled stiff clammy, Seps and pets obov acute conc. unguic, Lat segs of lip obov, middle one remf wavy emarg, Crest wavy truncate tubere at base, Wings of column small fleshy

20652 Pseudo bulb subglobose 1-lvd, Leaf fleshy linear-oblong acute recurved, Panicle branched many-flwd, Sepals and petals linear obtuse, Lip 3-lobed, Lateral segments minute ear-formed, middle one unguiculate transverse emarginate, Crest 5-lobed downy in centre, Wings of column deltoid straight

20653 Pseudo-bulb oblong compressed 1—2-leaved, Lvs narrow oblong flat obtuse shorter than scape, Scape racemose, Sepals and petals spatulate retuse, Lip downy lunate pilose at base, Lateral segments small reflexed, Crest linear depressed at top bidentate on both sides the teeth bearing glands, Wings of column cuneate

20654 Leaves long terete keeled, Panicle contracted many-flwd, Seps and pets conform obov concave, Lip elongated, Lat segs linear, middle one unguicul 2-lbd jagged on margin, Col short downy with semiovate wings

20655 Panicle branched, Seps linear-lanceolate wavy acute, Lip triangular rounded behind acute at top, Crest many-tuberculed, Wings of column narrow subdentate drawn out at base

20656 Racemes subpanicled, Sepals linear acuminate recurved at top, lateral ones very long, Auricles of lip convex dilated crenated, Middle lobe unguic crenated many-tuberculed at base Wings of col semi-cord acuminate

20665

20657 **Leaves 2 straight ensiform, Scape scandent racemosely panicled, Racemes flexuous, Lip 2-lobed roundish narrower at base auricled, Crest tubercled, Wings of column triangular acuminate**

20658 **Raceme twining panicled at base, Flowers few, Bracts oblong spathac shorter than ovary, Lat. sepals ungule. connate at base lanc wavy elong. dorsal one rndsh curled auried at claw length of col. Pets lanc. revol crld, Lip dagger-shpd crld with coarsely-toothed auries and large 3-tongued crest, Wings of col. small setac.**

20659 **Ps -b. 2-edged slender ribbed, Lvs ensate, Rac simple, Seps and pets lanc. unguic acum. wavy nearly eq., Lat. seg of lip small obl, mid one semicirc flat emarg Crest rhomb cusp., Wings of col. short fleshy inflexed**

20660 **Ps -b. oval compr. 2-lvd, Lvs nar. erect, Rac droop simp, Seps free, Pets lanc wavy, Lat. lbs of lip small nrly square, mid transv. hardly emarg, Tuber obl bident at base obsol 3-lbd at top. Wings of col short rndsh**

20661 **Ps -b ov flat fur 2-lvd, Lvs ellipt rec. at top, Racs simp erect or partly droop, Seps and pets obl. nearly eq. wvy, Lip obov ret. with deprsd tubercs on both sides at base and trhd lam. in mid., Wngs of col. slendr wvy**

20662 **Pseudo-b flattened obl 2-lvd, Lvs obl., Scape racem, Seps ov ac free, Pets conform broader, Lp large 3-lbd rndsh emarg apicul, Lat. lobes small obt, Crest 3 lobed warted, Wings of col semicord crenul. spotted**

20663 **Lvs terete 3 feet long diffuse, Scape erect densely panicled, Sepals and petals obtuse apiculate concave, Lateral lobes of lip spreading obliquely oblong nearly square, middle one obovate bifid with a depressed tubercle at base and 3-horned at top glabrous, Wings of column sublunate short rounded**

20664 **Lvs equit ac, Scpe long pend panic, Seps lin acum, lat ones almst conn to apex, Pets obov rndsh-apic., Lat. lbs of lip short conv. obt, mid one ung renif. emarg, Tuberc on crest 2—3 lbd, Wings of col large rounded**

20665 **Lvs short ensiform obtuse, Panicle spreading, Seps ov acute flat free, Pets conform rather wavy, Lip 3-lobed, Lat lobes rounded curled downy at base, mid lobe 2-lobed, Crest flat rather 4-lobed at top, Col. wingless**

20666 **Panicle racemose Sepals free obovate, Petals larger unguic obov spat., Lateral lobes of lip short serrulated, middle one large wavy emarginate, Crest linear 2-lobed Column with fleshy truncate glabrous wings**

20667 **Pseudo-bulb oblong sub-tetragonal 2-leaved, Leaves stiff spatulate-lanceolate, Scape slender pyramidal almost simple racemose, Flowers distant, Petals and sepals acute reflexed, Lip large roundish obsoletely 4-lobed, Crest triden arched behind cuneate in front with varicose veins, Upper wings of col rounded denticulate**

20668 **Pseudo-bulb oval slender, Leaves membranous ovate-lanceolate flat, Panicle racemose, Bracts 3—4-flowered, Middle lobe of lip roundish 2-lobed, Tubercle of crest 5—7-toothed glab, Wings of column triangular**

20669 **Pseudo-bulb oval shining 2-edged 2—3-leaved, Leaves lanceolate erect recurved at top, Scape panicled, Flowers secund, Sepals and petals lanceolate wavy equal free spotted, Lip 3-lobed, Lateral lobes roundish, middle one unguiculate transverse 2-lobed, Crest linear tridentate at top bidentate in middle, Wings of col trunc.**

20670 **Bracts ovate membranous obtuse, Lateral lobes of lip short, middle one large transverse emarginate obcordate, Crest bicallous, Tubercles distant one placed in front of the other, Auricles of col linear falcately recurved**

20671 **Leaves coriaceous acutely triquetrous complicate keeled, Scape panicled many-flowered, Sepals 2 spatulate, Petals ovate unguiculate wavy, Lateral lobes of lip small linear-obovate, middle one reniformly lunate emarginate, Crest double, upper 5-lobed, lower 3-lobed, Wings of column crenulated**

20672 **Pseudo-bulb oval flattened 3-ribbed on both sides 1-leaved, Leaf oblong sessile striated, Panicle divaricate, Lateral sepals connate at base ovate acute as are the petals, Lip large 2-lobed, Crest tubercled hastate 3-parted, Wings of column rounded toothed**

20673 **Pseudo bulb ovate 2-leaved, Leaves ensiform recurved, Scape panicled, Sepals linear-oblong wavy reflexed, Lip fiddle-shaped, Lateral lobes acute middle one 2-lobed, Crest of 5 crenated lamellæ rostrate at top, Wings of column cuneated toothed, Stigma beaked**

20674 **Pseudo-bulb oblong flattened furrowed 1—2-leaved, Leaves oblong-lanc coriaceous shining, Flws panicd, Seps green lanc, lower ones conn, Pets obov. spat, Lip 3-lbd with elong horn in centre, Col elong. wingless**

20675 **Pseudo-bulb ovate-flattened furrowed 2-leaved, Leaves linear-lanceolate, Scape long panicled, Sepals and petals conform ovate acute spreading, Lip broadly cuneate 3-lobed, Crest elevated acutely 3-lobed**

20676 **Pseudo-bulb elongated 2 leaved, Lvs oblong, Panicle racemose dense many-flowered, drooping, Lip obcuneate 2-lobed, Auricles ciliated, Crest of 4 tubercles, Wings of column oblong ciliated**

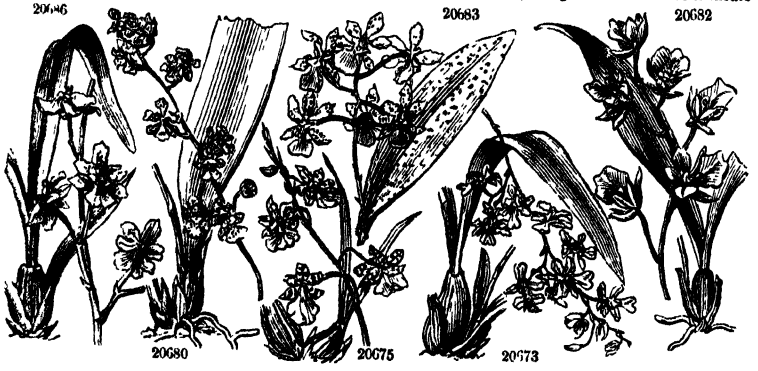
20677 **Pseudo-bulb narrow angular, Leaves lanceolate channeled, Scape panicled with many-flowered branches, Upper sepal unguiculate obovate, lateral ones longer spatulate-lanceolate, Petals broader obovate curled, Lip deltoid with rounded angles, Crest tubered at base bilamel at top, Wings of col scimitar-shaped toothed**

20678 **Leaves ensiform short equitant, Scape simple 1-flowered, Upper sepal obtuse, lateral ones acute collateral green, Petals obtuse undulated larger, Lat. Lobes of lip small roundish unguic, middle one much larger rndsh 2-lbd emarg on both sides towrds marg., Crest depr 5 lobed trunc at top, Wings of col. crenulate**

20679 **Lvs obl-lc stiff fleshy, Scape flexuous panicled many-flwd, Seps nearly ent. upper rndsh, lat ones spat., Pets rndsh crenately curled, Lat lobes of lip short revol, mid one renif., Crest of 2 lobes and 3 callosities**

20680 **Pseudo-bulb 1-lvd, Leaf coriaceous, Scape panicled elongated, Pedicels 1—2-flowered, Sepals and petals oblong-ovate curled, Lip 3-lobed 5 tubercled above the base, Middle lobe emarginate rather fan-shaped**

20681 **Bulbless, Leaves elliptic-oblong, Panicle ample, Sepals obovate-spatulate wavy, Petals conform but narrower, Lip tripartite with 5 tubercles in middle, Wings of column deflexed oblong**



20682 **Pseudo-bulb ovate 2-leaved, Leaves ligulate-lanceolate, Scape racemose, Lateral sepals united almost to the middle, Lip 3-lobed bilamellate at base, Middle lobe bifid**

20683 **Bulbless, Leaves oblong acuminate flat spotted growing singly, Racemes compact stiff, Sepals and petals similar spatulate wavy, Lip roundish auricled at base with scarcely any crest wavy in front like the letter W elevated with a toothlet on each side, Wings of column rounded a little lobed [white tinged with green**

20684 **Column short obtuse protuberant at base forming an obtuse angle with the lip Flowers large variegated, Lip [dulous connate at base, Petals oblong flat, Lateral lobes of lip small obtuse, middle one transverse**

2068 **Pseudo-bulb oval 2-leaved, Leaves narrow thin, Scape 2-flwd equal to leaves, Lateral sepals elongated pen-**

20686 **Pseudo-bulb 2-leaved oblong compressed ribbed, Leaves terete bluntish shorter than racemosely panicled scape, Sepals and petals distinct oblong obtuse uniform all sessile, Lip cuneate dilated retuse at top somewhat lobed at sinus, Crest excavated smooth 3-lobed bilamellate in front, Wings of column short truncate**

History, Use, Propagation, Culture,

3238. *Leochilus* Similar in habit to *Oncidium*, and they may be cultivated and treated in the same manner
3239. *Acianthèra punctàta* is a small plant with the habit of *Pleurothallis*, with oval leaves and 5—6 greenish grey flowers

20687 Lip fiddle-shaped 2-lobed much larger than sepals, Segments roundish flat with 3 tubercles above the base villous at base, Wings of column short

20688 Leaves fleshy acuminated serrulated, Flowers panicled, Upper sepals united into a spoon-shaped body, Petals obovate emarginate unguiculate cuspidate, Lip 3 lobed, Lateral lobes small, middle one broad 2-lobed with a toothed claw and double fleshy crest, Wings of column hatchet-shaped acuminated entire

20689 Pseudo-bulb ovate 2-edged 3—4-ribbed 2—3 leaved, Leaves ensiform acute, Scape long racemosely panicled, Sepals linear-lanceolate wavy free, Petals conform incurved, Lateral segments of lip short rounded, middle one roundish concave acute, Crest ovate depressed, lower half lined, upper ribbed, Column nearly wingless

20690 Bulbless, Leaves thick ovate-lanceolate acute, Scape panicled, Sepals roundish wavy unguiculate concave free quite entire, Pets much larger oblong obtuse emarginate curled, Lateral lobes of lip oblong fleshy acute with revolute edges, middle lobe reniform 2-lobed with 4 twin tubercles in mid., Wings of column linear obtuse

20691 Pseudo-bulb ovate furrowed 1-leaved, Leaves narrow lanceolate acute, Racemes subcompound many-flowered, Sepals and petals linear-lanceolate wavy acute reflexed Lip reniform emarginate, Lateral segments roundish erect glabrous 5-toothed bidentate at apex Wings of column large oblong toothleted

20692 Pseudo-bulb elongated ovate 2-edged, Leaves long ensiform recurved at top, Raceme compound many-flowered Seps and pets linear-lanc. wavy equal to lip, Lip constricted in middle cuneated at base dilated and rounded at top 2-lobed, Crest depressed downy 3 lobed at top, Wings of col elong truncate erose sphacelate

20693 Tufted, Pseudo-b narrow-lin scaly furrowed 1-lvd, Lvs lin-lanc. obt. wavy apicu, Scape 1-flwd short, Lat. seps connate at base obov-obl like pets, Lip fiddle-shaped, Mid lobe large emarg, lat ones short fringed in
β Mid lobe of lip yel. with a brown border [sinus Crest downy fringed, Wings of col trunc. erose

[short, mid emar obt, Disk pulv with small tub. behind at base

20694 Leaves acuminate keeled, Corymb loose, Bracts obtuse membranous, Lip linear 3-lobed, Lateral lobes straight

20695 Racemes nutant sheathed at base, Lateral sepals connate, Lip oblong convex retuse with downy crest below the middle melliferous at base

20696 Pseudo bulb ovate, Leaves lanceolate, Scape erect flowers secund racemose, Sepals and petals linear, Lip lin.-obl emarginate with a melliferous crest at base, Lamellæ 2 short truncate furnished with 2 filif. glands

20697 Leaf solitary ovate obtuse glaucous dotted with purple, Sepals villous outside dotted with purple inside, Lip purple, Petals dotted, Racemes few-flowered drooping spathaceous at base

20698 Rachis flexuous winged, Bracts ovate acute falcate cucullate, Petals oblong acute, Lip large obovate-roundish

20699 Leaves distich imbricate blue from bloom beneath, Flowers pure white except a spot of yellow at base of each division

20700 Pseudo-b. very narrow 2-edged smooth, Lvs linear ensif twin, Scape compr closely sheathed, Rac many-flwd, Brcts yellowish keeled length of pedunes, Seps and pets lin acum Lip ov-lanc. curled dwny at base mapp n.

20701 Pseudo-bulb ov 2-lvd, Lvs nar shorter than race, Bracts ov scale-formed, Seps and pets obl eq., Lip round
β Column and lip yellowish [ish curled convol about the col with 5 lamellæ, Col downy 2-eared at base

20702 Pseudo-bulb oval 2-leaved, Leaves ensiform narrow erect longer than scape, Raceme few flowered loose, Bracts small setac., Seps and pets lanc equal, Lip cord constricted in middle rounded at apex with 5 abrupt lamel

20703 Scape panicled, Sepals and petals oblong-lanceolate apiculate, Lip obovate rigid crestless lamellate with central incurving veins, Margins of column simple, Flower 2 inches in diameter

20704 Pseudo-b ov ribbed 2-lvd, Lvs ligu-lanc, Rac few-flwd, Bracts acum., Seps and petals conform ovate oblong wavy, Lip obl-cun retuse apicu, subsinuated with many trun lamellæ in disk, Col biden with falcate wings

20705 Pseudo-bulb ovate-oblong, Leaves striated, Racemes many-flowered, Sepals and petals lanceolate wavy, Lip cuneate roundish bilamellate at base, Column bidentate in middle, Clinandrium entire

20706 Pseudo-bulb 2-leaved oval 2-edged, Leaves ligulate obtuse, Scape terete erect sheathed, Raceme distich many-flowered, Bracts keeled convolute acuminate, Sepals and petals linear-obovate acute stellate, Lip oblong wavy acute, Wings of column scimitar-shaped entire

20707 Pseudo-bulb ovate compressed subangular 2-leaved, Leaves broad-ligulate acuminate striated obliquely emarginate, Scape simple, Flowers racemose, Bracts short scale-formed, Sepals and petals fleshy obovate-lanceolate acute, Lip membranous oblong apiculate toothed on both sides bilamellate at base, Wings of column falcate entire
β Lip subhastate, Lateral segments larger
γ Leaves narrower, Lip with 4 lamellæ at base, Horns wanting

20708 Scape long filiform few flowered, Sepals and petals lanceolate conform acute flat, Lip cuneate bifid furnished at base with subtuberculate teeth, Wings of column small cuneate truncate

20709 Pseudo-bulb short ovate furrowed 2-lvd, Lvs lin.-obl., Scape longer than leaves, Rac 8—10-flwd, Bracts small, Seps ov.-lanc acuminate, Pets ovate wavy, Lip large roundish fiddle-shaped bilamellate, Column bidentate

20710 Pseudo-b oval compressed corrugated 1-lvd many-lvd at base, Lvs ligulate acute flattish keeled much shorter than branches of scape, Bracts lanc much shorter than pedunes, Seps and pets ov acum Lip unguic. cord obov, Limb subrep and flat reflexed at apex downy in mid. obsoly lamel at base, Wings of col multifid

and Miscellaneous Particulars.

20711 Close to *maculatum* in habit, but has a yellow wedge-shaped lip It differs also from *C. filipes* in the shape of the lip

20712 Leaves shorter than slender scape, Lateral sepals acuminate, Lip unguiculate obovate apiculate warted shorter than sepals with villous recurved lamellæ

20713 Sepals ovate-lanceolate acuminate, Lip oblong acuminate wavy much shorter than lateral sepals

β Flowers green, Sepals and petals longer and narrower

20714 Lateral sepals elongated double the length of the lip Lip oblong lanceolate at top rather wavy

20715 Pseudo-bulb oblong 2-edged, Leaves twin oblong sessile wavy length of raceme, Sepals linear acuminate, lateral ones tailed, Petals linear acuminate, Lip linear-lanceolate acuminate with downy lamellæ

20716 Pseudo-b obl 2-edged 2-leaved, Lvs oblong obt shorter than many-flwd raceme, Bracts spreading scale-formed, Sepals linear acuminate, Petals contorm shorter, Lip cordate-ovate curled with connate downy lamellæ

20717 Pseudo-bulb oblong compressed 2-leaved, Leaves obtuse shorter than many-flowered raceme, Bracts spreading scale-formed, Seps and pets lin acum very long Lip cord -subrhomboid acum curled with bidentate lamellæ

20718 Pseudo-bulb oval 2-leaved, Leaves narrower ensiform erect larger than scape Raceme loose few-flwd, Bracts small set receous, Sepals and petals lanceolate equal, Lip cordate constricted in middle with 5 unequal lamellæ

20719 Sepals and petals nearly equal linear acuminate, Lip elongated cochleate acuminate

20720 Pseudo-bulb compressed 2—3-leaved, Scape nutant many-flowered Sepals linear acuminate, lateral ones very long, Lip oblong-lanceolate acuminate longer than petals with villous lamellæ

20721 Pseudo bulb narrow 2-edged, I eaves oblong lanceolate, Scape many-flowered equal to leaves, Sepals acuminate, lateral ones twice as long as lip, Lip rhomboid wavy shorter than petals with straight lamellæ

[Mule between *P. amabilis* and *P. rosea*

20722 Petals broadly rhomboid acute, Lat lobes of lip cuneate obtuse angled middle one ovate bicarinate at apex,

20723 Lvs obl cori ac recurv at top, Scpe nod brnchd twisted clav Flwrs fleshy, Seps ov , Pets oval a little broader, Lip ascend tripar , Lat segs lin -spatu lunate, mid one ovate, Crest lunate roundish depressed crenigunate

[deeply 3-lobed downy inside and with a conical spur at base Lat lbs incurv , mid one dilated at apex 2 lbd

20724 Lvs terete obt , Racs 2 or many-flwd longer than lvs Seps and pets suborbicular rather wavy spreading, Lip

20725 Leaves distich channeled, Racemes many-flowered, Sepals coriaceous unguiculate obovate obtuse, Lip 3-lobed 3-lined with a short blunt spur, Lateral segments rounded, middle one broader cuneate emarginate

20726 Lvs channeled recurved truncate obliquely tridentate, Raceme erect 4-flowered, Seps oblong obtuse arched, Pets narrower incurved, Lip 3-lobed, Lateral lobes short incurved, middle one vittate oblong saccate at apex unequal 3-horned, Horns short conical

20727 Leaves coriaceous, Spike loose many-flowered

20728 Lvs distich coriaceous truncate, Spike dense erect many-flowered, Bracts oblong concave obtuse, Lip leathery linear-obl with 2 diverging lobes having 3 lamellæ along the middle and 2 trun acum lobes Spur short obt

20729 Leaves channeled obliquely 2-lobed, Raceme many-flowered dense pedunculate pendulous, Sepals obovate obl obtuse flat incurved, Petals narrower, Lip obl apiculated flat with 5 thick elevated veins, Sac downy inside

20730 Roots thick, Leaves distich coriaceous obliquely emarginate obtuse shorter than many-flowered lateral raceme, Bracts coriaceous cucullate scale-formed, Flowers large flat coriaceous but the flower buds are globose, Sepals obovate-cuneate obtuse, Lip triangular saccate at base with a transverse line in the middle

20731 Stem tall, Leaves loose membranous obliquely tridentate Racemes lateral many flwd, Flowers distant Sepals and petals obl obovate wavy of one colour obt , Lip 3-lobed, Lat l bes obt , middle one cuneate 2 lbd

[oblong channeled spongy bilamellate denticulate, Spur narrow obtuse

20732 Raceme simple, Sepals oblong, Petals linear-spatulate, Lip 3-lobed, Lateral lobes ascending acute middle one

20733 Lvs distich coriaceous obliquely and acutely bidentate, Spike many-flwd, Seps and pets obov undulated, lower ones incurved and larger Lip teated at base obcuneate ret auricled bilamel bitubercu behind ben the apex

20734 Lip fleshy sessile with a small bearded tubercle, Column short tomentose unidentate on both sides, Lvs distich, Peduncles long racemose at top

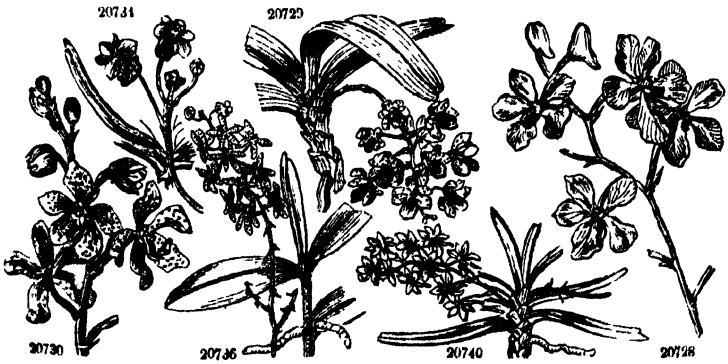
20735 Lip slipper-shaped, Terminal lobule truncate obsoletely tridentate inflexed furnished with a 2-lobed channeled appendage inside, Column twisted

20736 Raceme dense cylindrical on long peduncles panicled and simple, Sepals and petals obovate-linear obtuse, Lip ovate acute, Spur obtuse

20737 Lvs long channeled truncate, Racemes cylindrical dense-flowered arched equal, Sepals ovate, Spur compressed downy inside

20738 Stem short, Leaves thick distich ligulate truncate or toothed at top, Racemes oblong erect shorter than leaves, Sepals and petals ovate spreading nearly equal, Lip acuminate concave, Spur short compressed drooping

20739 Stem strong erect, Lvs large oblong acute, Racemes lateral many-flwd, Sepals and petals oblong blunt ish



20740 Leaves distich imbricate lorate channeled obliquely truncate at apex, Racemes short spreading, Bracts small, Sepals and petals ovate acute spreading, Lip linear obtuse recurved, Spur straight pendulous

20741 Leaves long channeled arched acute mucronate equal to pendulous racemes, Seps ovate, Pets oblong narrower, Lip oblong emarginate ribbed on both sides, Spur compressed very blunt downy inside

20742 Leaves distich coriaceous obliquely 2-lobed at apex, Racemes a little branched, Sepals and petals linear obtuse fleshy, Lip subsagittate recurved papillose with erose edges, Spur obtuse [formed Spur obtuse falcate

20743 Young stem 2-edged, Lvs distich stem-clasp wavy obt obliq triden., Rac cylind pend., Lip fleshy small tooth-

20744 Stemless, Leaves lorate acuminate obliquely bidentate at apex, Corymbs many-flowered on short peduncles, Sepals and petals obovate-oblong obtuse, Spur of lip inflated orbicular, Lamina lunate roundish ciliated

History, Use, Propagation, Culture,

3241. *Arrhýnchum.* A pretty little epiphyte

3242. *Malachadènia.* A singular plant requiring the culture of the hothouse epiphytes.

20745 Leaves distich coriaceous, Lip fleshy concave at base biauriculate oval cleft horizontally wrinkled adnate to spur, Spur ascending obtuse recurved thickened at the mouth and nearly closed

20746 Plant with creeping 1-leaved pseudo-bulbs, Scapes radical, Flowers fleshy galeate

[*trâtus*

20747 This plant has flowered in several hot houses, but appears to be nothing but a narrow-leaved variety of *S. ros-*
20748 Leaves terete filiform, Racemes many-flowered drooping, Sepals and petals reflexed, Lip ovate at top, Throat bidentate on both sides didymous at top of spur, Column glabrous

20749 Lvs lorate keeled truncate at top nearly equal, Spikes cylind. drooping dense-flwd equal to lvs, Lat. seps ov. obt., Petals and upper sepal twice the size, Lip ovate-oblong obtuse, Spur blunt shorter than ovarium

[one and pets lin blunt, Lip fleshy 3-lobed, Mid lobe roundish, lat ones very thick transversely truncate

20750 Stem leafy, Lvs narrow-lanc coriac acute, Corymbs few-flwd nearly sessile, Lat seps obliquely ov. acute, upper
20751 Lvs distich coriaceous ensiform obliquely retuse, Panicle spreading, Seps and pets obov obt. nearly equal, Lip hastate fleshy downy, Middle segment cordate triangular, Spur conical, Column downy bidentate in front

20752 Leaves distich lorate obliquely emarginate wavy, Spike recurved compound, Sepals and petals oblong rounded, Lip roundish transverse with a subventricose downy sac

20753 Spikes dense short many-flowered, Flowers pilose, Lip ovate acute crested in middle with a 2-lobed dorsal tooth, Lobes acuminate denticulated, Spur blunt longer than lip

20754 Lvs oblong distich rounded emarg at top much shorter than elong peduncle, Panicle small contracted, Flws crowded corymb, Seps and pets obl obt, Lip 3-lobed Lat lbs erect rudish, mid ov acute smooth, Spur fleshy

20755 This species has the habit of *Vánda* with long stalked spikes of small ysh brown and pink rudish fleshy blossoms

20756 Leaves oblong obtuse almost equally 2-lobed at top, Flowers panicled, Branches simple rigid, Petals and sepals linear obtuse, Lip reniform with membranous 2-lobed tooth, Spur ventricose

20757 Leaves fleshy channeled arched stiff, Branches of simple panicle densely spicate nutant, Lateral lobes of lip minute erect, middle one roundish, Spur small obtuse fleshy

20758 Flowers small pink stained at base with dingy purple

[ment roundish emarg, lat ones acute, with an elevated tooth in middle, Cup of clinandrium entire rounded

20759 Pseudo-b oval, Racs many-flwd cylind, Pedicels longer than internodes, Lip downy fiddle-shaped, Middle seg-
20760 Pseudo-bulb ovate, Lvs solitary linear channeled spreading emarginate, Scape panicled, Lip 3-lobed, Lateral segments triangular, middle one elongated linear with a bilamellate disk Arms of column biglandular

20761 Leaves linear-lanceolate seated on the pseudo-bulbs, Peduncles radical panicled, Flowers pedicellate

20762 Leaves distich channeled obliquely tridentate at apex, Ovarium twisted, Petals oblong-ovate wavy

[obtuse, Petals conform larger, Lip larger ovate obsoletely 3-lobed, Claw saccate jointed, Spur small

20763 Leaves channeled retuse mucronate, Racemes cylindrical many-flowered erect equal to leaves, Sepals oblong

[rulate somewhat bidentate, lateral ones erect ovate, Spur horned incurved

20764 Lvs flat obtuse oblique, Racs many-flwd nutant, Seps and pets nearly equal obtuse, Lip large ovate retuse ser-

[shaped, Lateral lobes erect, middle oblong inflexed toothed, Spur conical secund green

20765 Lvs obliquely emarg mucronate, Racs pendulous many flwd longer than lvs, Seps and pets fleshy, Lip tunnel-
20766 Leaves coriaceous oblique and obtuse at apex, Raceme dense nutant rather panicled, Sepals roundish-oblong, Petals conform but twice the size, Lip ovate wavy entire with one tooth at base on each side, Column short

20767 Leaves distich channeled broad thick obtuse oblique at top, Raceme pendulous many flowered, Sepals obovate obtuse, Petals conform, Lip large 3-lobed denticulate at top, Middle lobe large

768 Lip horned, Lat segs roundish quite entire, middle one short lahd glabrous Near *quinquevilinerum*

20769 Racemes oblong horizontal 12-flwd, Bracts ovate small scabrous, Sepals and petals oval obtuse, Lip horned ascending 3-lobed pressed to column Lateral lobes oblong denticulate, middle one linear bifid

0770 Leaves rounded at end 2-lobed sometimes toothed, Spikes strict, Sepals and petals acute, Lip rhomboid quite entire acuminate, Ovarium 3-winged equal

[pets lanceolate spreading, Lip conform a little larger shorter than filiform emargin te spur

20771 Stem short, Leaves cuneate-obovate obliquely 2-lobed reticulated, Racemes long pendulous many-flwd, Seps and
20772 Stem imbricate, Lvs distich compressed recurved imbricate obtuse channeled, Flws axil solitary, Seps ovate, Pets narrower secund obtuse, Lip behind obl concave triden., Spur terete horizontal shorter than peduncle

20773 Stem short, Lvs obl 3-nrvd oblique at apex, Spikes secund many-flwd horizon. crowded shorter than lvs, Seps and pets nrly eq nar ov spread at top, Lip similar 2-lbd at base bilden. downy in mid, Spur obt inc behind

774 Stemless, leafless, Roots copious elongated articulated, Peduncles generally 2-flowered, Petals and sepals obl.-lanceolate reflexed, Lip 3-lobed, Lateral lobes small erect, middle lobe broad obcordate, Spur filiform

20775 Stem short radicant, Lvs distich obov.-lanc obliquely acum opaque striated, Racs long pend many-flowered, Seps and pets lanc spreading, Lip conform a little broader shorter than filif spur, Crest of anther glandless

20776 Stems creeping, Lvs distich coria ovate obliquely emarg at top, Spikes equal in length to the lvs, Flws resupin, Seps and pets galeate dentic ov -lanc, Lip fid -shpd obtuse dentic l tthd at base, Spur arched length of lip

20777 Stemless Leaves distich oblong rather wavy recurved oblique at top, Racemes dense nutant axillary shorter than leaves, Sepals and petals linear-lanceolate, Lip fringed cordate-ovate truncate, Spur short lanceolate

and Miscellaneous Particulars.

3243 *Acrópera* Curious little epiphytes, with compactly arranged flowers in racemes about 2 inches long. Their culture is the same as for other orchideous epiphytes.

History, Use, Propagation, Culture,

3244 *Limatòdes ròsea* is a terrestrial plant, has much the habit of a species of *Calánthe*, and may be cul ivated and treated like the species of that genus It is a splendid plant when in blossom, and flowers most abundantly

20778 Caulescent, Leaves distant lanceolate acute, Peduncles axillary 1-flowered, Sepals and petals ovate-lanceolate acute, Spur slender pendulous equal to peduncle

20779 Caules l vs distich channeled acutely and oblıq biden at apex, Spikes lat horizontal secund, Seps ov., Pets linear, Lip 3-lbd, Lat. lbs acuminate longer than triang middle one, Spur pendulous clavate compr at base

20780 Leaves broad distich, Lip roundish convolute at top cuspidate with an elevated acuminate broad flat line in middle, Spur horizontal acuminate straight twice as long as lip

20781 Stemless, Leaves channeled recurved equal to pendulous recurved raceme, Flowers distant divaricate, Sepals ovate, Petals linear acute Spur arched inflated at top diaphanous

20782 Leaves coriaceous distich unequally 2-lobed at apex Flowers in lateral horizontal racemes, Bracts membranous, Sepals and petals almost uniform linear taper-pointed, Spur long blunt

20783 Leaves narrow channeled obliquely obtuse, Spikes short dense cylindrical, Flowers beset with black hairs outside, Lip cuneate truncate 3-lobed, Spur curved clavate obtuse length of lip

[short, middle roundish crested undivided

20784 Scapes slender many-flowered sheathed at base, Lip saccate at base 3-lobed bilamellate, Lateral lobes acute

20785 Scape erect, Lvs broad obl. petiolate acum., Racs many-flwd, Lip 3-parted crested by 5 series of tubercles, Lat. segs lin subtal, mid one cun emarg, Spur long falc clav Col. oblique bifoveate in front, Ovary downy

20786 Pseudo b ovate or roundish striated reticulated, l vs plicate broad-lanc acum channeled glabrous, Scape 3 feet radical hairy with small lanc adpressed sheaths, Spike 2 feet, Flws villous white stained with crimson in mid Seps refixd, Lip longer than seps 3-parted, Segs ruded, mid one bifid, Col short thick, Spur filif infixd

20787 Like *C. veratrifolia* in foliage and general habit but with far finer flws, at first white, then changing to yellow, so that the upper part of the raceme is pure white and the lower bright yellow [downy acute

20788 Racs l ose dwn, Seps and pets ac., Lip 3-lbd jointed with col downy at base bilam, Mid lb 2-lbd 3-keeled, Spur

20789 Scape shorter than leave, Scales loose ventricose, Racemes many-flowered corymbose, Lip rather connate with column Middle lobe cuneate 2-lobed, Disk bilamellate, Spur long straight pendulous clavate

20790 Leaves oblong glabrous twice as long as thick scape Racemes dense cylindrical glabrous, Bracts membranous deflexed deciduous, Lip hastate, Lateral lobes short obtuse, middle one lanceolate, Spur hooked

20791 Leaves oblong-lanceolate concave 7—9-nerved glabrous, Scape downy at top, Raceme dense pyramidal, Lip joined to column 2-lobed Lateral lobes ovate short middle one cuneate 2-lobed longer with 4 tubercles at base and warts along the middle, Spur glabrous Ovary downy

20792 Pseudo-bulb ovate sulcate 1-leaved, Leaf lanceolate acuminate striated sheathed at base, Scape radical glabr Spike elong loose many flwd Sepals and petals lanceolate, Lip erect oblong-spatulate clasping the col 3-lbd Lat lbs short obt, mid one broad semi-orbic muer, Disk lamel spotted, Spur short obt incrvd

20793 Pseudo-bulb fusiform, Leaves oblong-l anceolate plicate smooth, Scape loosely many-flowered shaggy, Bracts curved backwards, Lip oblong flat retuse, Spur straight blunt horizontal, Column dwarf downy

20794 Sepals linear acute, Petals conform obtuse, Lip obovate emarginate rather wavy narrowed at base and lamellate, Wings of column semicord acute [curved length of ovy, Wings of col cun dentic, Anthr dwny

20795 Bracts distich cucullate ovate acute, Seps and petals ovate acute, Lip oblong purple at base bident, Spur re-

20796 Bracts ovate acute, Sepals and petals ovate acute, Lip oblong emarginate obsoletely bidentate at base spurless gibbous, Wings of column ovate acute, Anther villous

20797 Lip scrrul roundish slightly 3-lobed, Mid lobe emarg, Spur conic, Lat sepals reflexed, Bracts length of flws

20798 Leaves oblong-lanceolate acuminate loosely sheathed, Spike oblong many-flowered, Sepals ovate acute, Lip broader than long obsoletely 3-lobed flat, Lateral lobes emarginate much larger than middle one which is acute, Spur pendulous horned shorter than lip, Bracts green acuminate sometimes longer than flower

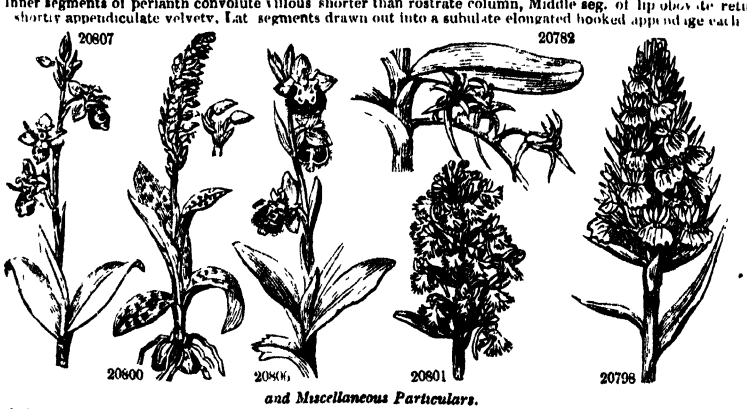
20799 Lip 3-lobed, Lobes ovate, mid one smaller emarginate all crenately cut, Pets obt, outer ones refixd, Spur cylindrical ascend, longer than ovary, Bracts lohac twice as long as flws. There is a variety with purple flws

20800 Leaves spotted, Spike dense secund, Flowers small, Petals subulate, Lip spreading oblong equal to the sepals gibbous at base 3-lobed, Middle lobe obovate mucronate

20801 Lip 3-parted, Segments wedge-shaped deeply-toothed, middle one emarginate, Lateral sepals obtuse a little toothed, Horn subulate ascending length of ovarium

[obl obt many-flwd, Seps lin-conv recurved Petals conform smaller, Lip obl-ac, Spur shrtr than ovy

20802 Leaves twin radical cordate orbic flat papillose, Sheaths adpressed to stem acute foliac complicate, Spike



20803 Lower Leaves broad ovate obtuse many-nerved becoming smaller and oblong as they ascend the stem, Upper ones near the bracts tinged with red Bracts foliaceous coloured, Sepals and petals linear-lanceolate acute, Lip large with a projecting point and curved denticulated border

20804 Lip wedge-shaped dilated, Lateral segments broad, middle one oblong scarcely emarginate

20805 Bulb roundish, Racemes loose longer than ovaria, Lip with 2 teats crenate

20806 Lip obovate-triangular velvety undivided bigibbous at base and with an inflexed rhomboid appendage at top, Petals convolute velvety about equal to the short beaked column

20807 Inner segments of perianth convolute villous shorter than rostrate column, Middle seg. of lip obovate retuse shortly appendiculate velvety, Lat segments drawn out into a subulate elongated hooked appendage each

and Miscellaneous Particulars.

pseudo-bulbs have the peculiarity of producing a kind of neck about their middle. The genus was first made known by Blume, and the species mentioned by him are said to be fibrous-rooted plants.

History, Use, Propagation, Culture,

3245. *Sarcoglóttis* is a genus separated from *Spiránthes* by Presl The species require the constant heat of a st[illegible] and thrive in a rich loamy soil, kept moist when in a growing state, but dry after the leaves have decayed
3246 *Peristylis* A genus separated from *Habenària*, and may be cultivated in the way recommended for *Sarcoglóttis*

20808 Lip bigibbous ovate acute 3-parted villous, Lateral lobes deflexed acute, middle one ovate, Petals ciliated acute
20809 Lip oblong nearly square violet with a white horseshoe-shaped spot in middle, Sepals rose-coloured

20810 Stem 2-leaved, Leaves wavy acuminate, Spike few-flowered, Bracts acuminate green shorter than ovary, Sepals ovate acute nearly equal, dorsal one horizontal, Petals undivided galeate obtuse, Lip entire ensiform, Spur pendulous twice as long as ovary 2-lobed at apex
20811 Stem leafy Leaves oblong cucullate at base spreading gradually decreasing into bracts, Racemes many-flowered, Bracts green, lower ones foliaceous, upper ones small ovate Lip 3-parted, Lateral segments linear a little shorter than the broader middle one, Spur pendulous clavate twice the length of ovarium
20812 Tubers undivided Lip tripartite, Lateral lobes curled upwards pectinate, middle one stretched out linear-spatulate, Horns veiny, Two inner petals linear-falcate Flowers large

20813 Leaves radical stellate Flower nutant, Lips about equal in length Galea acuminate, Lip tapering to apex truncate
20814 Leaves radical stellate, Bracts on scape 2—3, Flower erectish, Lower lip shortest, Galea acutish Lamina of lip ent.
20815 Leaves radical stellate, Bracts of scape near the flower, Flower erect, Lower lip rather the longest, Galea acuminate, Lamina of lip entire tapering to apex and exceeding the column
20816 Leaves radical stellate, Scape furnished with one bract in the middle, Lamina of lip emarginate equal to column

20817 Lip 4-lobed, Lobes ovate obtuse, middle one larger having 9 veins with as many parallel equal lamellæ at base, Sepals obtuse concave warted outside, Veins of petals warted

20818 Plant olive-brown hairy, Scales distant lanceolate disposed generally about the stem Spike 7—8-flowered, Bracts lanceolate acuminate incurved longer, Ovary hairy, Sepals glabrous, upper one retuse, lateral ones obtuse concave at top, Lip glabrous at base sagittate villous above base obovate obtuse conic shining a little crenated
20819 Leaves oblong coriaceous rosulate glabrous, Scape leafless hairy with 2—3 sheaths, Spikes ovate hairy, Bracts linear-lanceolate glabrous on back, Lip oblong rounded veiny, Claw excavated at apex 2-legged at base
20820 Leaves oblong acute spotless, Scape rufescent downy as is the ovarium Lateral sepals deflexed Lip 3-lobed cucul Mid lobe reniform, lat ones ascending roundish, Claw villous on both sides, Callosities along free twisted
20821 Leaves before flowers Sheaths of stem inflated glabrous diaphanous, Flowers capit to tomentose outside, Lip flat at top oblong quite entire
20822 Leaves radical spatulate acute, Scape glabrous, Flowers villous, Leaflets of perianth narrow dirty white at length rufescent glabrous towards apex, Lip spreading acuminate
20824 Leaves radical spatulate acute pale green, Scape downy towards apex, as are the flowers, Leaflets of perianth yellowish green, outer and lower ones falcate obtuse, Lip deflexed tridentate

20824 Leaves oblong-lanceolate acute, Scape pilose, Spike conical thyrsoid compact, Bracts lanceolate green shorter than pilose flowers, Sepals and petals linear-lanceolate acuminate, Lip conform glabrous at base channeled

[spike approximate
20825 Lower leaflets of perianth revolute, inner one linear, Lip linear-oblong with naked margins, Flowers of
20826 Lower leaflets of perianth revolute oblong acute, inner ones linear obtuse, Lip oblong cuneate retuse at apex warted with callous tubercled margins

20827 Stem 2-leaved, Lvs cordate acute, Spike secund, Sepals and petals ovate-lanceolate acute nearly equal, Lip 3-lobed saccate at base, Lateral scales of anther elongated clavate
20828 Stem elongated, Leaves elliptic-lanceolate, Spike many-flowered, Lip nearly entire obtuse as are the pets, Spur globose saccate, Seps ovate acuminate green

20829 Leaves rich green the midrib silvery white and the rest of the surface marked with fine transverse silvery lines

20830 Leaves narrow-lanceolate marked with a bar of gold colour through the centre upon a dark green ground
20831 Leaves having a narrow bar of gold colour down the centre, otherwise marked with golden meshes on a dark velvety green ground

20832 Leaves green thickly netted with silvery lines
20833 Leaves curiously veined and appearing as if covered with a film of silver, Flowers small white in short spikes

20834 Leaves of a deep reddish olive green with a velvety surface traversed by fine golden yellow veins, and a bar of gold colour down the centre

and Miscellaneous Particulars

3247 *Physàrus.* This genus rivals the *Anæctochilus* in the beauty of the leaves It requires the same kind of treatment as that plant. It is found on the hills of Botofogo near Rio Janeiro among decayed leaves

3248 *Cheirόstylis marmorâta* is less beautiful than the *Anæctochîlus setâceus*, a plant of similar habit A damp heat is required. Three parts of chopped *Sphagnum* and one third of decayed leaf-mould make the best compost for it.

History, Use, Propagation, Culture,

20863. *Aristolòchia grandiflòra.* The flowers of this species are very large On the banks of the river Magdalena children adorn their heads with them in place of hat or bonnet. *A. macradènia* does very well cultivated in a pot and trained to a balloon trellis. A piece of the root of *A. anguicida*, according to Jacquin, mixed with the saliva by mas-

20835 Lip bicarinate at base inside, Lateral segments about equal to middle one, Petals obovate

20836 Leaves ovate-subc[illegible]te succulent on short petioles, Flwrs twin, Seps and pets narrow-oblong erect channeled Lip membranou[illegible]ovate emarginate with 3 downy elevations at base, Column clavate bearded on the face, Ovary caliculate

DIANDRIA.

20837 Stemless, Lvs coriaceous acute channeled spotted, Scape downy, Dorsal sepal cuspidate ciliated with revolute edges, Pets linear-oblong rather wavy fringed, Upper margin warted, Sterile stamen lunate downy

20838 Leaves 2 broad plicate, Flowers solitary

20839 Lvs distich long obt slightly ntchd at apex sheathing at base, Scape gland few-flwd, Lip with a notch in front of pouch and large triang tooth on each side, Lat segs narrow lanc -spat. acum much longer than outer

20840 Stemless, Lvs 3 stich uniform leathery smooth, Scape bearing several flowers longer than leaves, Bracts as long as ovary, Seps ovate-lanceolate gracefully curved, Pets extended into very long pendent wavy linear tails, Lip oblong glandular on edge at base, Sterile stamens broader than long 2-lobed bristly

20841 Stem leafy pilose many-flowered, Lvs ovate acuminate stem-clasping, Sterile stamen ovate acum rather 3-lobed, Seps and pets oblong equal bearded at base bipartite in front at apex, Lip obovate constricted at mouth

20842 Lvs oblong ac striated spotted equitant at base, Scape downy leafless, Dorsal sepal acum ciliated with revolute edges, Petals oblong wavy downy, Sterile stamen lunate [leafy, Lvs nearly glabrous

20843 Lobe of col elongated cord, Mouth of lip shorter than peri. contracted crenul., Anthers awned on back, Stem

20844 Nearly allied to *C. maculatum*, but the 2 lateral innermost segms of perianth are much narrower and longer than the lip, the mouth of the lip is also larger and with a small cleft at the lower extremity, and is not so regularly notched and is deeper purple

20845 Lvs linear ciliated piliferous at top, Scapes and flwrs covered with glandular hairs, Rachis very villous, Panicle pyramidal [duncles crowded subcorymbose terminal, Ovarium linear

20846 Stem branched Lvs crowded at top of branches subulate recurved membranous towards margins at base, Pe-

20847 Stems tufted, Lvs linear subulate glabrous ending in a bristle-like mucrone, Scape panicled at top, Segments marked with a zigzag line around the mouth ovate nearly equal

20848 Lvs linear ensiform glossy with entire edges, Scape glabrous, Raceme simple downy, Lip appendiculate

20849 Tufted, Lvs radical rosulate copious linear acute ciliately scabrous on margins piliferous at apex, Scape glabrous bracts bracteate, Racemes and flowers covered with glandular hairs, Lip tuberculate

20850 Scape inarticulate glabrous furnished with one whorl of leaves beyond the middle, Radical leaves rosulate spatulate mucronate, Throat of corolla crowned, Lip appendiculate

20851 Stems short branched at base, Lvs glabrous lin -subulate setaceously mucronate, Scapes and pedunc terminal naked panicled at top and beset with glandular hairs, Lip appendiculate on both sides, Ovarium cylind elong

20852 Scape covered with gland. down branched a little, Lvs flat elong lanc ensiform, Pets 4 wavy repand denticu., the 5th obl deflexed callous in mid with 2 appends at base, Scales in throat 2 semilanc ciliated denticulate

20853 Glabrous Stems numerous leafy, Lvs linear acute, Upper ones fasciculately subverticillate, Flowers in terminal racemose spikes, Capsule compressed lanceolate

20854 Glaucous, Radical lvs rosulate lin -spat., Caul lvs verticil., Racemes loose verticil., Calyx eq 5 parted, Segments of corolla obov 2 smaller, Throat crowned with capitate glands, Lip linear acp a tuberculate at base

20855 Scape beset with acute hairs, Raceme nearly simple, Capsule ventricose ovate, Leaves linear attenuate at base with the margins a little recurved, Scales scarious

20856 Lvs rad tfid lanc -lin acum reflexed on the marg naked and shining with elong shi thg scales at base, Scpe twice as long as lvs gland -dwny panicled, Calyx bilab, Up lip trifid, lower 2-parted Throat of cor crowned

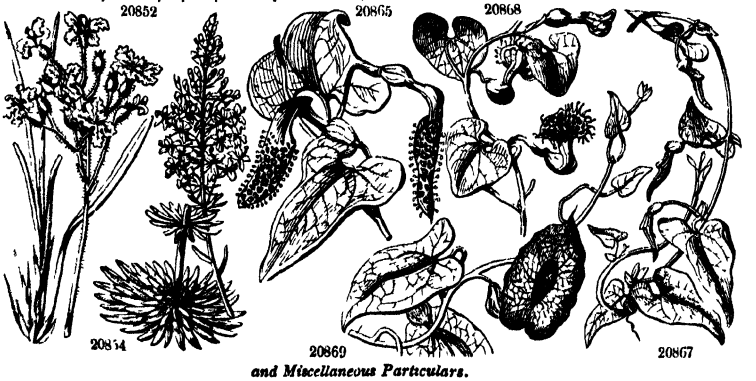
20857 Lvs radical linear glabrous piliferous with entire edges, Raceme simple, Rachis downy Scape glabrous, Throat of corolla naked, Lip app nduiculate [R beset with black glands

20858 Stem elongate imbricate, Lvs spatulate acute with denticulated edges, Scape leafless taceme cylindrical sim-

20859 Scape beset with acute hairs, Lvs radical spatulate apiculate ciliated, Panicle den cylindrical glandularly tomentose, Rachis villous, Calyxes obtuse

20860 Scape glandularly pilose decumbent, Lvs linear reduplicate scariously pubescent, R me loose subcorymbose glandularly hairy

HEXANDRIA.



[in a very long l, Tube glabrous outside

20861 Lvs broad-cordate acute Peduncles solitary 1-flowered furnished with a perfoliate bra t, Lip large entire ending

20862 Leaves large petiolate, Stipules stem-clasping oblong acute, Peduncles solitary axillary, Perianth tubular bilabiate, Lower lip short, upper spatulate emarginate 6 inches long

20863 Lvs downy cordate acum., Peduncle solitary bracteate, Perianth large cordate ribbed outside reticulated downy, Tube inflated contracted in middle, Limb large cordate-ovate with a long tail

20864 Lvs cordate acute, Peduncles 1-flowered, Perianth large unilabiate obliquely pendent, Tube curved upwards, the lower part oblong furrowed and contracted, the upper part assurgent and inflated ending in a large shell-formed concave veiny white purple-spotted lip tailed at top

and Miscellaneous Particulars.

tication, renders powerless a serpent of moderate size, if one or two drops are put into its mouth, when it may be handled with impunity. It also cures the bite of a serpent.

Page 768. CLASS XXI. — MONŒCIA.

Order 2. DIANDRIA Stamens 2

3249. 1939*a*. *Pistia.* Spathe tubular at base, and connate with the spadix Limb spreading. Spadix female at base and male at apex. Anthers 3—8, or diandrous Ovarium one, adnate to spadix, seated obliquely. Style thick terminal. Stigma cup-shaped Berry 1-celled, few- or many-ovulate Seeds cylindrical.

Order 4 TETRANDRIA. Stamens 4

3250 1971*a* *Fortunæ'a* Lindl Male aments lateral, heart-shaped, erect Scales foliaceous, hairy inside, whit tetrandrous at base —Female aments terminal, composed of dense, 1-flowered, erect, imbricate, mucronate, glabrous scales Calyx 4-toothed, superior Corolla none Ovarium 1-celled, compressed, 2-winged Ovulum solitary erect Style short. Stigmas 2, linear, spreading Strobile oblong, composed of hard, mucronate, downy scales Nut slightly compressed

Order 6 HEXANDRIA Stamens 6

3251 1972*a*. *Holboëlla* Perianth 6-leaved, disposed in two series Stamens distinct Glands 6, opposite the base of the stamens —Female flowers with 6 sterile stamens. Stigma simple Berries 3, distinct, oblong, follicular 1-celled many-seeded

3252 1972*b* *Akèbia* Perianth 3-leaved. Stamens free Glands 6 —Female flowers with 6 sterile short stamens Ovaria 3—9 distinct oblong-cylindrical, terminated by a peltate stigma

3253 1985*a* *Leopoldìna* Spadix paniculately branched without a spathe Lower flowers female, at base of branches upper ones, male. Sepals 3 Stamens 6, flattened, connate at base —Female flowers. Ovarium turbinately trigonous 3-celled, 2 of the cells small Stigmas 3, sessile, short, spreading. Berry drupe-formed, orbicular, compressed, 1-seeded

3254. 1985*b* *Astrocáryon* Spathe fusiform Flowers dense. — Male flower Calyx trifid. Petals 3 Stamens filiform Rudiment of ovary with 3 subulate styles —Female flowers below the male ones, bracteate Calyx urceolate 3-toothed Corolla urceolate, tridentate Style 1 Stigmas 3, confluent, conical or lobed Drupe ovate, 1 seeded fibry Nut with 3 pores at top

3255. 1985*c*. *Acrocòmia.* Spathe simple, lanceolate. — Male flowers dense on the upper parts of the branch sessile Calyx small, of 3 sepals Petals 3, lanceolate-oblong — Female flowers on the lower part, remotish, sessile Calyx of 3 sepals. Petals 3 Cupula annular, 6-toothed, girding the ovary Ovarium ovate, 3-celled, hairy Style short Stigmas 3, lanceolate Drupe globose, 1-seeded. Nuts lenticular, with 3 pores at the side

3256 1985*d* *Œnocárpus* Flowers bractless Spadix double, inner one complete.—Male flower Calyx tripartite with keeled segments Petals 3 Stamens 6, in bottom of corolla.—Female flowers. Sepals 3 Petals 3 Ovarium 3-celled, 2 of the cells very small Stigmas 3, sessile, connivent Berry 1-seeded, fibry, crowned by the stigmas

3257 1985*e*. *Wallichia* Flowers sessile, bracteate. Spathes many incomplete — Male flowers Calyx trideutate Petals 3 Stamens 6 —Female flower Calyx urceolate trifid. Petals 3. Ovarium 2- rarely 3-celled Stigmas 2—3 connate Berry 2—3-seeded

3258 1985*f*. *Martinèzia* Upper flowers male, lower female Spathe 1-leaved —Male flower Calyx small tetraquetrous, 3-lobed Petals 3, acuminate Stamens 6, adnate to petals —Female flower. Sepals 3 Petals 3, with barren filaments. Stigmas 3, sessile, obtuse, connivent. Ovarium 3-celled Drupe globose, 1-seeded

3259 1985*g* *Oncospérma* Spathe triple, inner one incomplete Male flowers twin, female single. — Male calyx 3-parted, with keeled imbricate segments. Petals 3, valvate Stamens 6 Anthers sagittate, fixed by the base —Female with 3 sepals and 3 petals, convolute Ovarium 3-celled, only 1 of which is fertile Stigmas 3, sessile, connivent Berry 1-seeded.

3260 1985*h*. *Syagrus.* Flowers sessile, bracteolate, male in the upper part, lower female. Spathe double outer short, open at top, inner one fusiform, rather woody, open in front its whole length —Male Sepals 3, triangular membranous Petals 3, rather fleshy, lanceolate, carinately crested, connivent Stamens 6-16, inclosed —Female flower with erect sepals and petals, the former keeled, the latter oblong and exceeding the sepals, imbricate Ovarium 3-celled, 2 of which are abortive, therefore 1-celled. Style none. Stigmas 3, sessile, pyramidately trigonal Drupe oblong, 1-seeded, fibry. Nut bony, with 3 pores at base

3261. 1985*i*. *Euterpe* Flowers monœcious in the same spadix: lower ones male, sessile, bracteate Spathe double, outer one short —Male. Sepals 3, ovate, concave, keeled, imbricate Petals 3, coriaceous, ovate or lanceolate erect, valvate. Stamens 6, inclosed. Anther linear, subsagittate, fixed by the base, erect Rudiment of pistil trifid —Female. Sepals 3, ovate, obtuse, concave, imbricate. Petals 3, similar but thinner. Ovarium 3-celled, 2 of the cells small. Stigmas 3, sessile, acute, connivent. Berry 1-seeded, globose, crowned by the stigmas, fibry Nut smooth

3262. 1985*k* *Maximiliàna.* Flowers sessile, bracteate. Spadix girded by a thick, woody, oblong, long, beaked furrowed, simple spathe —Male. Sepals 3, membranous, ovate-triangular. Petals 3, lanceolate, subcoriaceous Stamens 6. Anthers linear, fixed by the back.—Female bracteate, situated at base of spadix Sepals 3, imbricate Petals 3, large. Cup membranous girding the ovarium. Ovarium ovate-conical, 3-celled, 2 of the cells abortive, the retorted 1-celled. Stigmas 3, revolute. Drupe ovate, 1-seeded, fibry. Nut bony, acuminate at top, with 3 pores at base

3263 1985*l* *Geónoma.* Flowers monœcious in the same or in distinct spadixes, rarely dicœcious, immersed in pits on the rachis, female ones single, male ones in twos or threes. Spathe double, rarely triple, outer one truncate complete, concave, inner one compressed or fusiform —Male. Sepals 3, concave and keeled Petals 3, flat Stamens 6 Filaments connate into a cylinder, free at top Cells of anthers divaricate —Female Sepals 3. Corolla trifid Staminous urceolus 6-toothed, covering the ovarium. Ovarium 3 celled. Style basilar. Stigmas 3, subulate, revolute Berry 1-seeded

3264 1985*m*. *Diplothèmium.* Flowers, lower male, upper female Spathe double: outer one shorter, open at top inner one clavate or cylindrical, at length cleft in front —Male flowers coriaceous, with 3 sepals and 3 petals *former narrow-lanceolate and keeled, and connate at the very base, the latter ovate and a little keeled,* erect or convivent. Stamens 6—12, or indefinite Anthers sagittate, erect —Female flowers coriaceous, ovate-globose Sepals 3, ovate, keeled, imbricate. Petals 3, entire or repandly toothed. Ovarium globose, trigonal, 3-celled, 2 of the cells abortive, therefore only 1-celled Stigmas 3, sessile, triquetrous, pyramidally conniving, at length spreading Drupe ovate or obovate, fibry. Nut bony with 3 pores at base.

3265. 1985*n*. *Duvaüa.* Calyx 4-cleft, persistent. Petals 4, concave. Stamens 6—10, inserted in the disk Ovary 6-toothed. Ovary sessile, conical, 1-ovulate. Styles 3—4, short. Stigma capitate. Drupe globose, containing a coriaceous nut. Seed pendulous.

2965 Glabrous. Lvs cordate-hastate with a deep broad sinus and rounded lobes on long petioles, Peduncles axillary solitary 1-flowered Perianth unilabiate, Tube inflated at base striated, Limb ovate with reflexed sides reticulated above glandular. Glands large globose stipitate

2966 Glabrous, Lvs and stipules uniformly cordate, Flower large solitary, Perianth tube inflated obovate globose, Limb cylindrical at base bilabiate, Upper lip lanceolate acute densely pilose inside, Lower lip extended from a linear channelled base to a very broad reniform reticulated lamina

2967 Lvs on short petioles cordate acuminate, Stipules cordate-roundish, Peduncles axillary solitary 1-flowered, Tube of perianth inflated at base dilated and oblique at the mouth

2968 Stem flexuous not twining nearly simp., Lvs on long petis unifmly cord obt glauc. beneath, Pedunc axil sol 1-flwd, Tube of perianth curved infla at base, Limb unilat rndsh obt painted cil. with long gland. flshy hairs

2969 Glabrous, Lvs cordate acute, Flowers purple tessellate terminated by a short tail, in the centre leading to the throat is a rich spot of golden colour

---

Order 7 POLYANDRIA. Stamens more than 6.

3265 2005*a* *Ambrosinia.* Spathe convolute at base and cucullate at top, and cuspidate. Spadix flattened; female in front at base, and male at top on back. Anthers usually 10, adnate to back of spadix Pistil solitary, free. Ovarium subglobose, sessile, 1-celled Style terminal curved in towards the spadix Stigma roundish Capsule globose, depressed, sessile, 1-celled, indehiscent, many-seeded

3267 2005*b* *Arisæma.* Spathe convolute at the base Spadix naked at top Anthers verticillate, on distinct filaments Cells open by a transverse chink or pore Ovaria numerous, free, 2—6-ovulate. Style short, or wanting Stigma capitate Berry 1- or few-seeded Seeds globose, with a broad basilar hilum.

3268 2005*c* *Cryptocóryne* Spathe or spadix inclosed or connate together at apex, or exserted, free. Male flowers very remote from the female flowers Anthers at top of spadix, sessile, or shortly stipitate. Ovaria 6 or more in a whorl at the base of spadix, combined into one many-celled fruit Styles distinct

3269 2005*d* *Pothandra* Spathe elongated, undulated recurved at top Spadix interruptedly androgynous Sterile appendage short, naked Anthers 1-celled, verticillate, opening by a pore at apex Ovaria numerous, scattered, 1-celled Style short Stigma subcapitate. Berry 3—4-seeded

3270 2005*e* *Xanthosóma* Spathe convolute at base, straight. Anthers 2-celled, verticillate Cells contiguous, opening by chinks Ovaria numerous, about 4-celled, cohering by the thick placenta-formed styles. Ovula many. Stigma depressed, lobed, glutinous

3271 2005*f* *Acontias* Spathe as in *Xanthosóma* Spadix interruptedly androgynous Anthers 2-celled, verticillate Cells contiguous, opening by transverse chink at apex Ovaria many, about 3-celled, many-ovulate Styles combined Stigma minute orbiculate, clammy

3272 2005*g* *Syngónium* Spathe as in *Xanthosóma* Anthers by fours or fives 2 celled Cells opposite, opening by pores Ovaria numerous, connate, 1-celled, 1-ovulate Stigmas distinct, sessile, glutinous. Berries many, concrete, 1-seeded

3274 2005*h* *Culcásia* Spathe straight, gaping, short Anthers sessile, 2 from each dot Ovaria numerous, crowded, free, 1-celled, 1-ovulate Stigma sessile, capitate

3275 2005*i* *Philodéndron* Spathe convolute at base, straight Spadix continuous, androgynous Anthers 2-celled, distinct Cells opening at top Ovaria numerous, free, 5—15-celled many-ovulate. Style short. Stigma capitate, or obscurely lobed Berries free, many seeded

3276 2005*k* *Spathicárpa* Spathe involute Spadix adnate to spathe. Stamens numerous Anthers 6—8, 1-celled opening by a pore in the middle Ovaria numerous, free, 1 celled, 1-ovulate Style elongated Stigmas capitate Berry 1-celled, 1-seeded

3277 2005*l* *Dieffenbáchia* Spathe convolute. Spadix adnate to spathe, upper part male, free. Stamens numerous Anthers 3—4, 2-celled, verticillate Cells parallel, opening by a pore at apex. Ovaria numerous, free, 1-celled, 1-ovulate Stigma discoid, sessile Berry 1-celled, 1-seeded

3277 2005*m* *Anthurium.* Spathe gaping at base, convolute at apex Spadix, the female part adnate to the spathe, sterile appendage filiform. Anthers numerous, crowded, conadunate, 2-celled Cells opposite, opening by a transverse chink Ovaria numerous, free, 1-celled, 1 ovulate Style filiform Stigma depressed, round Berry 1-celled 1-seeded

3278 2005*n* *Aglaonema* Spathe gaping, convolute Spadix continuous, androgynous. Anthers many, free, sessile 1 celled, opening by a pore beneath the apex. Ovaria numerous, free, 1-celled. Stigma discoid, sessile. Berries 1-celled, 1-seeded

3279 2005*o* *Homalonèma.* Spathe gaping Spadix androgynous Anthers numerous, sessile. Ovaria numerous, free 3-celled, many-ovulate Stigma sessile, trifid, concave

3280 2005*p* *Monstera* Spathe gaping, deciduous Spadix female at base, and pseudo-hermaphrodite at apex Filaments flattened Anthers 2-celled. Cells opposite, dehiscing lengthwise Ovaria 2-celled. Cells biovulate Style short Stigma capitate Berries connate

3281 2005*q* *Scindápsus* Spathe gaping, deciduous Spadix sessile, base female, top pseudo-hermaphrodite Filaments cuneate, compressed Anthers 2-celled. Cells divaricate, dehiscing lengthwise Ovaria 1-celled, 1—2-ovulate Stigma sessile, oblong. Berries 1-seeded Seed hooked.

3282 2005*r* *Sauromátum.* Spathe tubular at base, with a flat spreading limb. Spadix interruptedly androgynous rather clavate and naked at top. Anthers sessile, distinct Cells dehiscing by a short oblique chink. Ovaria numerous, free, 1-celled, biovulate. Stigma depressed, sessile. Berries 1-seeded.

3283 2005*s* *Dracúnculus.* Spathe convolute at base, with a flat spreading limb. Spadix androgynous, subclavate at top and naked Anthers combined in clusters, 2-celled Cell opening by a short oblique chink. Ovaria numerous, free 1-celled, 3—5-ovulate Stigma depressed, sessile. Berries 1, few-seeded.

3284 2005*t* *Pythonium.* Spathe convolute at base, with an arched limb Spadix androgynous, naked at top and 2-horned Anthers distinct, on short filaments, 4-celled, dehiscing by 4 pores. Ovaria numerous, free, 1-celled, 1-ovulate Style subulate Stigma valvately 3-lobed Berries 1-seeded.

3285 2005*u* *Amorphophállus* Spathe convolute at base Spadix androgynous. Sterile appendage elongated, smooth or warted Anthers distinct, on very short filaments, 2-celled, dehiscing by a double pore Ovaria numerous, free, 2—3—4-celled, ovate Cells 1-ovulate Stigma capitate, entire or lobed Berries distinct, 1- or few-seeded

3286 2005*v* *Remusátia* Spathe convolute at base, with a refracted convolute limb. Spadix short, interruptedly androgynous. Stamens combined by twos or threes Anthers 2-celled, connate by the back. Cells verticillately disposed opening by a longitudinal chink. Ovaria numerous, crowded, free, 1-celled, many-ovulate. Stigma sessile, depressed

3287 2005*w.* *Colocásia* Spathe straight or cucullate. Spadix interruptedly androgynous. Sterile appendage ovate or acuminate Anthers numerous, 2-celled, free. Cells contiguous, opening by a pore at apex. Ovaria numerous, free, 1-celled, 6—7-ovulate Style short. Stigma subcapitate.

3288 2005*x* *Gonatánthus.* Spathe convolute at base, with a lanceolate refracted limb. Spadix short, interruptedly androgynous Stamens connate by threes Anthers 2-celled, adhering by the back, opening by a longitudinal pore formed chink Ovaria numerous, crowded, free, 1-celled, many-ovulate. Stigmas sessile, depressed, orbicular

3289 2005*y* *Typhónium.* Spathe convolute at base Spadix interruptedly androgynous, naked, and subulate at apex Anthers distinct, 2-celled Cells opposite, dehiscing lengthwise. Ovaria numerous, free, 1-ovulate. Stigma sessile, depressed. Berries 1-seeded

3290. 2005*bb*. *Bidrum*. Spathe subulate at base, with a flat spreading limb. Spadix interruptedly androgynous, naked at top. Anthers sessile, crowded. Cells opposite, opening by a chink or pore Ovaria numerous, free, 1-celled. Style distinct Stigma subcapitate Berries 1-seeded.

3291 2007*a* *Ordnia* Male and female flowers in different spathes, sessile, bracteolate Spathes many, imbricate — Male flowers with 3 sepals and 3 petals. Stamens many, filiform Anthers linear.— Female flowers. Calyx of 3 sepals Corolla urceolate, trifid. Ovarium 2-celled Stigmas 2, sessile, acute. Berry 2-seeded. Seed flat on one side, and convex on the other.

3292 2007*b*. *Irdrtia* Flowers sessile, bractless: outer spathe incomplete, obliquely truncate at top, inner complete, open lengthwise.—Male. Calyx of 3 concave sepals Petals 3, erect, valvate Stamens 12—50 rarely Filaments short, terete. Anthers tetragonal —Female Calyx of 3 orbicular sepals. Petals 3, orbicular Ovary 3-celled, 2 of the cells abortive. Stigmas 3, sessile. Berry 1-seeded, yellowish.

Order 8. MONADELPHIA. Stamens united into a single body

3293 2009*a*. *Desmóncus* Spadix girded by a double spathe; outer one short, inner one cylindrical —Male flowers with a triangular trifid calyx and 3 petals. Stamens 6, from the bottom of the flower, filiform, with linear anthers Female flower firmer than that of the male Calyx cupular, truncate, or tridentate Corolla urceolate, truncate-tridentate Ovarium 3-celled, 2 of the cells rudimentary. Style short. Stigmas 3, acute. Drupe ovate or subglobose, 1-seeded. Nut with 3 pores at top.

3294 2009*b*. *Jubæ'a* Spathe simple —Male flowers panicled, pedicillate Calyx 3-parted Petals 3 Stamens numerous, inserted in bottom of corolla —Female flowers like those of the males Ovarium 3-celled, 2 of which are small Stigmas 3, spreading. Drupe obovate, 1-seeded Nut with 3 pores at apex.

3295. 2009*c* *Attalea* Flowers sessile, bracteate, upper ones male, lower female.—Male flowers of 3 sepals and 3 petals. Stamens 10—24, crowded Female flowers of 3 sepals and 3 petals Ovarium 3- rarely 4—5- and more rarely 2-celled Stigmas as many as there are cells, subulate, connivent. Drupe elliptic, fibry, containing a 2—3-celled nut Cells porose at base

3296 2009*d* *Manicària* Flowers, lower female, upper male, bracteate Spathe simple, fusiform, reticulated — Male Sepals 3, scarious, ovate-suborbicular, imbricate. Petals 3, coriaceous, oblong Stamens 24—30 Anthers linear-sagittate, erect —Female. Sepals 3, scarious, ovate, imbricate. Petals 3, coriaceous, oblong-lanceolate Rudimentary stamens about 12 Ovarium turbinate, trigonal, furrowed or angular, 3-celled. Stigmas 3, sessile, ovate-triangular at first erect but at length spreading Drupe containing 3 nuts, rarely 1—2 nuts by abortion, corky angularly echinated Nut crustaceous, covered with reticulated fibres, with a hole at bottom

3297 2009*e*. *Arénga* Flowers sessile, bracteate. Spathe complete Calyx 3-sepaled Petals 3 Stamens indefinite Anthers cuspidate —Female flowers Ovarium 3-celled. Stigmas 3, conical, connate at base Drupe containing 2—3 trigonal nuts.

3298 2009*f*. *Cyclánthus*. Flowers surrounding the spadix in a spiral manner. the male series alternating with the female series Spathe 4-leaved, imbricate — Male flowers earliest Stamens numerous, free, filiform Anthers oblong, 4-celled, dehiscing lengthwise. — Female flower. Ovaria numerous, within a double lamina, and surrounded by the spathe, biseriate, sessile, 1-celled, many-ovulate. Style short. Stigma spatulate. Fruit fleshy, spiral, many-seeded

3299 2011*a* *Dámmara* Flowers dioecious, terminal —Male ament extra-axillary. Stamens numerous, inserted on the axis, imbricate, short, drawn out into a thick connate connective. Cells of anther 8—15, cylindrical, free Female ament terminal, nearly ovate. Scales bractless, imbricate. Ovulum solitary under the scales Strobile ovate globose, imbricate Seed ending in a wing at both ends.

History, Use, Propagation, Culture,

3249 *Pistia* is composed of floating water-plants, nearly related to *Lémna* The species only require to be thrown into water in a stove. Plenty of heat is requisite. They are singular plants, and one species has become very common

3300. 2013*e*. *Cédrus*. Almost the same as *Làrix*, but having the carpels separating from the axes, and the leaves evergreen. Cones erect, large, solitary Anthers terminated by an elliptic scabrous crest. Carpels coriaceous, compressed, deciduous.

3301. 2018*a* *Callitris* Male catkin terminal, ovoid Stamens numerous, naked, Filaments peltate, loosely imbricate. Cells of anthers 2—5, longitudinally 2-valved, inserted in the stipe under the pelta —Female receptacle terminal, very short, girded by 4—5 scales Ovula 3—9, at base of scales, sessile, erect, open at top Cone formed of woody, mucronate, connivent scales, which separate into 4—6 valves Seed drawn out into a wing at both ends

3302. 2018*b* *Phyllocladus* Flowers terminal —Male catkin spike-formed, girded by imbricate bracts at base Stamens numerous, short, the connective drawn out into a lacerated scale Anthers 2 celled. Cells adnate to the connective, dehiscing lengthwise. Female catkin nearly globose, imbricate by bracts. Flowers terminal by threes: middle one abortive. Disk cup-shaped, fleshy, girding the ovulum, which is sessile and attenuated at apex, obliquely pertuse Fruit subdrupaceous pervious at top Seed nut-formed, erect

3303 2018*c* *Widdringtònia*. Female receptacle terminal, reflexed, of 4 similar valvately-verticillate scales, with 4—5 ovula at the base of each scale Ovula erect, disposed in one or two series, pertuse at apex. Strobile subglobose, 4 valved Valves equal 5—10-seeded Seeds ending in a wing at both ends

3304 2018*d* *Stàchæ'a*. Anthers of male flowers spicate Female cones imbricate. Scales acuminate, monospermous below the middle. Seed nucumentaceous, triangular

3305 2018*e*. *Frenela* Male catkin terminal, ovate-subglobose. Stamens numerous, ternately verticillate, imbricate in 6 rows. Filaments short, prolonged into a scale-formed, excentric, peltate connective or process, bearing each 4 horizontal, longitudinally 2-valved cells.—Female catkins solitary, terminal, or panicled, composed of 6 scales, alternate ones narrower. Seeds many, at base of scales, in many series. Cone subglobose, 6 valved, woody. Seeds numerous, wingless

3306 2018*f* *Fitzróya*. Male flowers unknown. Female catkin solitary, sessile, globose, terminal Scales 6, inserted by 2 series: the lower 3 ovate-orbicular, thick, coriaceous, with a short spine above the middle on the back, 3 exterior smaller, more spreading and abortive, the [illegible] ones erect, bearing ovula Ovula 3, at the base of each scale. Fruit like a cone. Seeds orbicular, subbidobed, ciliately compressed.

3307 2018*g* *Cryptomèria*. Male catkin spicate Antheriferous scales roundish, adpressed, imbricate Cells of anthers 5, connate, altogether aduate to the base of the scales, dehiscing by a broad foramen in front Ovula erect. Cone solitary, globose, squarrose, composed of 3—6-toothed scales Bracts acuminated, lanceolate, concrete at base, Seeds 4—6, compressed, angular, hardly winged

3308. 2018*h* *Libocedrus*. Male catkin cylindrical, terminal Stamens 5—7 Filaments short, prolonged into a scale-formed, deltoid, peltate process, bearing 4 cells on the lower margin —Female catkin solitary, terminal Gemmiferous scales 4, verticillate, mucronate beneath the apex Cone 4-valved, alternate Valves smaller, 1-seeded. Seed unequally winged at both ends

3309 2018*i* *Biota* Male catkins ovoid, terminal Stamens imbricate, in four rows Connective peltately orbicular, mutic, with 3—4 horizontal cells —Female catkins solitary, terminal Gemmiferous scales 6—8, broad, decussate, opposite, sessile, mucronate, imbricate, inner ones sterile. Scales of cone coriaceous, 2-seeded. Seeds with a wing at both ends

3310 2032*a*. *Codiæ'um* Male Calyx 5-parted reflexed, convolute in æstivation. Petals 5, scale-formed, shorter than calyx and alternating with as many glands Stamens numerous, hypogynous Cells of anthers adnate to the rather dilated connective on both sides —Female Calyx 5-cleft Corolla none Ovarium girded by 5 hypogynous scales at base, 3-celled, 3-ovulate. Styles 3, filiform, reflexed. Berry dry or subbaccate, tricoccous Cocci 1-seeded

---

DIANDRIA.

20870 Leaves roundish-obcordate with wavy margins, Lamellæform nerves confluent in a basilar truncate area
20871 Leaves oblong-obovate retuse, Lamellæform nerve confluent in a large basilar area

20872 Leaves lobed, Flowers axillary

TRIANDRIA.

[acute, Fruit roundish-ovate compressed with a very short entire beak, Nut elliptic triangular, Leaves flat
20873 Fertile spikes 2—3 upon long stalks oblong dense flowered, Bracts auricled foliaceous, Glumes ovate-lanceolate
20874 Barren spikes 1—2 slender acute fertile, 2—3 ovate-obtuse, lower one stalked bracteate sheathless, Fruit oblong-ovate nerved inflated narrowed into a short bifid beak, Glumes acute
20875 Fertile spikes erect remote 3—4-flwd pedunculate, Bracts sheathing leafy, Glumes acute, Fruit large nearly globose with a long bifid beak and rough edges, Nut elliptic trigonal with bluntish angles
20876 Spikes panicled, Lower branches rather distant, Fruit ovate ribbed at base, Beak bidentate serrulated, Nut rhomboid convex on both sides with a short beak, Stem trigonal scabrous at top
20877 Fertile spikes 1—3 ovate near together sessile, Bracts small membranous the lowest with an awl-shaped point, Glumes of fertile spikes notched and muc , Fruit narrow below obl.-obov trig with a short notched beak
20878 Spikes 1—4 roundish or oblong continuous nearly sessile, Fruit obovate triquetrous scabrous above with a short beak, Nut obov triq blunt with a short beak, Bracts length of spikes, Stem triang rough towards the top
20879 Spikelets several, upper ones simple crowded lower ones distant composed of alternate spicula, Nut lanceolate plano-convex with an entire beak Lower bracts longer than spike
20880 Fertile spikes remote with distant flowers on exserted stalks, Bracts sheathing scarcely leafy, Glumes bluntish, Fruit ovate triquetrous glabrous with a short truncate beak, Nut elliptic triangular beaked
20881 Barren spike solitary, fertile ones 2—4 oblong slightly stalked, Bracts leafy, Fruit longer than glume lanceolate entire beaked many-nerved, Nut obovate rounded at end and shortly beaked
20882 Spikelets 4—8 ovate or oblong approximate, Fruit erect ovate plano-convex, Beak short split to the base rough on edge, Nuts elliptic, Glume ovate shorter than fruit
20883 Spikelets 3—4 roundish-elliptic contiguous, terminal one longer, Fruit erect elliptic acuminate plano convex with smooth edges, Nut elliptic tipped with the persistent style, Glumes ovate as long as fruit

20884 Leaves oblong acute bluntish at base clothed with fine fuscescent down beneath
20885 Leaves ovate-oblong acuminate serrulated

β Leaves much cut almost palmate, Lobes deeply toothed, Middle lobe long acuminate
20886 Leaves soft round heart-shaped

and Miscellaneous Particulars.

In our hothouse aquaria. In tropical countries the ponds and pools are densely covered with either one or other of the species of *Pistia*. It is doubtful whether they are not all merely varieties depending upon climate

Báctris globosa minor Gaertn *Cocos fusiformis* Swartz

History, Use, Propagation, Culture,

20888. *Bétula Bhojpáttra*. The epidermis of this tree is used by the mountaineers in the Himalaya instead of paper for writing upon It is of a very delicate texture, and peels off in large masses, of which great quantities are brought down into the plains of Hindostan, where it is employed for covering the inside of the long flexible tubes of the hookas used for smoking The Sanscrit name of the substance is *Bhoorja*, the Bengalee name is *Bhoorjapattra*, and the Hindostani name is *Bhojpattra*

3250 *Fortunæ'a chinénsis* A hardy tree, of as easy culture as the walnut

3251 *Holbollia*. The natives of Nepal eat the fruit, the pulp of which has a sweetish, but otherwise insipid, taste The species flower very well trained against a wall, without any other protection

3252. *Akebia quinàta* is a very pretty climber while in blossom. In China it grows in hedges, and there it climbs on other trees, and hangs down in graceful festoons from the ends of their branches. The colour of the flower is dark brown, and it is very sweet-scented It succeeds very well trained against a wall or trellis, and is perfectly hardy

20887 Leaves very large
20888 Leaves oblong acute serrated rather cordate at base having the stalks and veins hairy beneath, Branchlets hairy, Female catkins erect, Bracts smooth 2-parted obtuse longer than narrowly winged fruit

20889 Arboreous, Leaves alternate on short petioles obliquely oblong cuspidate serrated roughish, Male flowers panicled, female ones capitate, Heads on short pedicels baccate in the fruit-bearing state

TETRANDRIA.

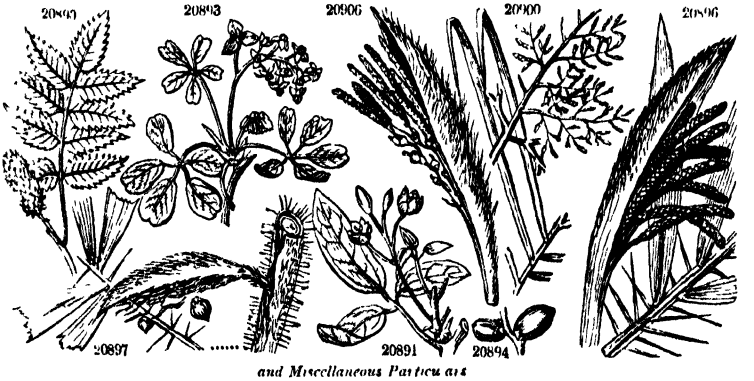
20890 Leaves pinnate with 4—5 pairs of ovate-lanceolate biserrated leaflets and an odd one

HEXANDRIA.

20891 Leaves ternate or quinate coriaceous, Leaflets oblong obtuse mucronate, Peduncles longer than petioles
20892 Leaves ternate or quinate coriaceous, Leaflets oblong-lanceolate acuminate, Peduncles shorter than petioles, Spals acute

20893 Leaves ternate or quinate, Leaflets ovate or obovate entire obtuse or emarginate mucronately setaceous

[Female flowers ovate-globose, Drupe obovate-elliptic



20894 Caudex dwarf annulate at base, Fronds short with approximate lanceolate pinnæ, Petals of male flowers thick,
20895 Caudex flexuous scaly from the bases of the fallen leaves, Fronds spreading, Pinnæ loose curled distantly aggregate linear, Female flowers oblong angular, Drupe oblong beaked

20896 Caudex and rachis glabrous beset with long terete prickles, Pinnæ nearly opposite or scattered lanceolate subfalcate ciliated, Spathe densely imbricate by compressed shining prickles, Spadix branched
20897 Caudex prickly, Petioles sheathing at base prickly, Rachis glabrous prickly behind and unarmed in front, Pinnæ scattered delto d cuneated præmorse with a longer marginal tooth on each side unarmed clothed with silvery tomentum beneath, Spathe prickly, Spadix bristly branched Drupe turbinate globose
20898 Caudex reed-like unarmed, Sheaths of petioles prickly, Rachis nearly unarmed, Pinnæ pectinate linear falcately acuminate pilosely ciliated, Spathe prickly, Spadix 2—5-cleft, Drupe globose unarmed glabrous
20899 Caudex tall glabrous as well as rachis but prickly, Prickles large compressed, Pinnæ subaggregate falcate-lanceolate or oblong-cuspidate ciliated, Spathe prickly, Spadix branched, Drupe globose glabrous unarmed

20900 Pinnæ linear acuminate same colour on both surfaces, Outer fibres of berry free and filiform

Chairs Bracts of male flws hairy, Calyx ciliately multifid, Female flws sessile Drupes obovate beaked bristly
20901 Very prickly, Pinnæ narrow-lanceolate acuminate silvery beneath, Peduncle of spadix beset with turned back
20902 Very prickly, Pinnæ lanceolate subfalcate silvery beneath, Bracts of male flowers smoothish, Female flowers nearly sessile, Calyx glabrous shorter than hairy corolla, Drupe pear-shaped spiny
20903 Full, Pinnæ lanceolate acuminate silvery beneath, Bracts of male flowers ciliated, Calyx of female flowers hairy arcolate exceeding the glabrous corolla, Drupe globose unarmed
20904 Stemless Pinnæ narrow-lanceolate acuminate paler beneath, Bracts of male flowers penciled on back, Calyx entire Female flowers pedunculate, Calyx and corollas equal glabrous, Drupes globose unarmed
20905 Stemless, Pinnæ linear subfalcate white beneath, Bracts of male flowers ciliated, Calyx fringed, Female flowers with glabrous equal calyxes and corollas, Drupes obovate beaked unarmed
20906 Pinnæ lanceolate acuminate white beneath, Bracts of male flowers ciliately villous on the back, Calyx nearly entire, Female flowers pedunculate, Calyx and corollas equal glabrous, Drupe ovate unarmed
20907 Pinnæ linear præmorse paler beneath, outer ones connate, Female flowers sessile prickly, Drupe subglobose unarmed

20908 Petioles of fronds prickly or bristly, Pinnæ linear-lanceolate downy beneath rather glaucous, Drupes globose

and Miscellaneous Particulars

20903 *Lepidocaryum pulchra* is a middle sized palm tree, with a fibry caudex, and pinnate unarmed leaves. The head is paniculately branched, and covered with rusty tomentum, as well as the bracts and bracteoles. The flowers are small and reddish The culture is the same as for other tropical palms.

20904 *Iatrocarpon* is a genus of middle-sized palm trees, some of which have stems, and some without, which are armed with strong dark prickles The fronds or leaves of all are pinnate and ciliate with prickles. The spadix is simply branched and prickly, usually white from tomentum. The spathes are woody and also prickly. Flowers dense and yellow or orange

20905 *Acrocomia* is a genus of gigantic palm trees The caudex or stem is usually swollen in the middle, and prickly. The fronds or leaves are pinnate, and curled The petioles and spathes are prickly. The spadix is simply branched. The fruit is olive brown

History, Use, Propagation, Culture,

3256. *Œnocárpus* is a genus of gigantic palm trees, with annulate soft stems and pinnate curled fronds The spadix rises beneath the fronds, and is fastigiately branched and broom-formed, and the branches are covered w granular brown tomentum. The spathes are double and woody. The drupes are globose and pruinose

3257. *Wallichia* is a genus of small East Indian palm trees, with pinnate fronds and præmorse cuneate pinnæ T spadix is simply branched, and the branches are pendulous. The flowers are small and cream-coloured, and the berries are brown and dry.

3258. *Martínesia caryotæfòlia* is a tall palm tree, with roots issuing from the caudex, which is prickly. The fronds are pinnate, and the pinnæ are cuneiform, obsoletely 3-lobed, alternate, and having a prickly rachis The petioles are also beset with straight twin prickles beneath. The spathes are ovate, and also prickly. The spadix is prickly with flexuous branches. The fruit is reddish yellow.

3259. *Oncospérma filamentòsum* is an elegant palm tree, growing in humid places by the sea shore The stem is tall, slender, and prickly The fronds are terminal and pectinately pinnatifid, and the segments are conduplicate The fruit is small and globose.

3260. *Syagrus cocoides* is a middle-sized palm tree. The fronds are terminal and loosely pinnate. The spadix is simply branched The spathe is sulcate on the back The flowers are rather larger and cream-coloured. The fruit is dry, and of a yellowish green colour

3261 *Euterpe oleràcea* is a beautiful palm, with pectinately pinnate fronds. The spadix is branched and scur

20909 Caudex naked, Fronds scattered, Pinnæ linear-lanceolate, Calyx of male flowers 4 times shorter than the acutish petals, Segments ovate-triangular, Berries ovate-elliptic obtuse

20910 Caudex subterraneous, Pinnæ cuneate præmorse, Branches of spadix drooping, Berry ovate-oblong dry

20911 Almost stemless, Pinnæ white beneath, the lower ones rising in twos, the rest solitary linear-oblong cuneated, at base entire, the rest spinosely toothed or erosely serrated, Female flowers dense

20912 Caudex prickly, Pinnæ wedge-shaped 3-lobed and erose, Rachis prickly, Petioles prickly, Spathe ovate prickly, Branches of spadix simple flexuous

20913 Caudex tall slender, Fronds terminal pectinately pinnatifid, Segments reduplicate acuminate, Petioles sheathing a great way at base, Spadix solitary under the leaves simply branched at top, Branches fastigiate pendulous

20914 Caudex annular below, Fronds pinnate, Pinnæ linear narrow curled a little, Drupes obovate elliptic

20915 Fronds pinnate pectinate, Flowers dense covering all parts of the branches of spadix, Sepals of male flowers broad-ovate denticulated, Petals lanceolate not so long as sepals

20916 Leaves elliptic obovate, Pinnæ quite entire lanceolate spreading tapering to apex, Petioles unarmed lepidoted beneath, Floriferous branches of spadix spreading much, Flowers loose by pairs, Fruit roundish

20917 Caudex middle-sized crowned by the vestiges of the fallen leaves Anthers exserted double the length of petals, Female flowers some in each branch

[Flowers imbricate in 4—5 rows, Calyx and corollas of male flowers equal, Berries nearly globose

20918 Fronds terminal lanceolate tapering at base bifid at top sometimes irregularly pinnate cut, Spadix branched,

20919 Stemless, Fronds lanceolate cuneate at base bifid at apex, Spadix radical simple cylindrical Cor of male flowers exceeding the calyx, Berries ovate [long as the corollas

20920 Stemless, Fronds pinnate, Pinnæ lanceolate, Spadix radical simple cylindrical, Calyx of male flws not half so

20921 Fronds terminal pinnate, Pinnæ præmorse, Spadix branched downy, Flowers imbricate in 4—5 rows, Male flws with equal calyxes and corollas, Berries globose

20922 Fronds terminal undivided lanceolate cuneated at base bifurcate at top, Spadix panicled downy, Flowers imbricate in 6—8 rows, Male flowers with the calyxes about equal to corollas, Berry ovate-globose

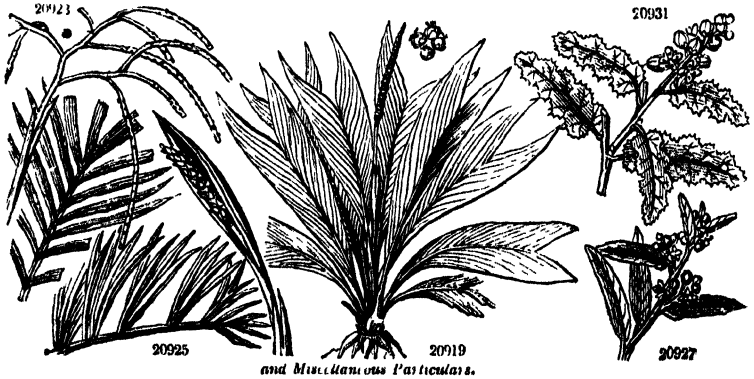
20923 Fronds terminal pinnate, Pinnæ linear approximate, Spadix panicled with elongated tomentose branches, Female flowers solitary, Berries ovate

20924 Stemless, Fronds loose curled, Pinnæ linear glaucous beneath, Drupe obovate pentagonal

20925 Stemless, Fronds split, Pinnæ stiff lin glaucese beneath, Male flwrs hexandr, Anthers obt, Drupes ov. glob

20926 Caudex middle-sized, Fronds rather curled, Pinnæ linear long acum. silvery beneath, Male flowrs polyandrous

20927 Leaves linear-oblong narrowed at base quite entire, Corymbs sessile axillary, Flowers 7—8-androus



20928 Leaves ovate-lanceolate entire and sometimes trifid, Racemes length of leaves, Flowers octandrous

20929 Leaves lanceolate toothed, Racemes compound a little longer than leaves, Flowers decandrous

[drous

20930 Leaves ovate toothed acute or obtuse, Racemes axillary and a little longer than leaves, Flowers usually octan-

20931 Leaves oblong coarsely toothed wavy acute, Racemes dense about equal to leaves, Flowers hermaphrodite

and Miscellaneous Particulars.

The spathe is double: the outer one short and open at top, the inner one open all its length The flowers are sessile, and the fruit dark purple.

3262 *Maximiliàna régia* is a showy middle-sized palm tree. The fronds are pinnate, and the pinnæ are aggregate The spathes are persistent. The spadix is simply branched. The flowers are compact. The drupe is brownish

3263 *Geónoma* is a genus of small reed-like palms The stems are slender, annulate, and smooth, rarely wanting. The fronds are rather simple or pinnate. The petioles are sheathing. The spadixes are spicate, and very often panicled. The berries are ovate, or nearly globose, spiny, of an obscure colour, rather fleshy, but insipid.

3264. *Diplothémium* is a genus of Brazilian palms usually stemless. The fronds are pinnate, on short petioles. The pinnæ are stiffly spreading or curled and interruptedly aggregate. The spadix is simple, bearing the flowers in front The outer spathe is hidden among the leaves The flowers are large and cream-coloured. The drupes are yellowish, and the flesh is fibrous but edible.

3265 *Duvália* is a genus of half-hardy shrubs or trees. They would probably stand in the open air in Devonshire without injury. They require only common treatment, and may be increased by layers or cuttings. The same phenomenon in the leaves as that in those of *Schinus Mólle*. After lying a short time in the water, they will begin to start and jump, as if they were alive, while at the same instant of each start a jet of oily matter is discharged into the water The *D. latifólia* is called *Huingan* in Chili

POLYANDRIA.

[ciliated, primordial ones roundish-cordate, Peduncles axillary 1-flwd, Ovarium acutely triangular wingless
20932 Rhizoma tuberous, Stem simple bearing bulbules, Leaves obliquely cordate acuminate angularly crenate rather
20933 Root tuber., Stem short, Lvs deeply cord. ser acute rugose hairy spot. beu., Cap. tom. with short uneq wings
[long pilose, Male flws dipetalous cymose, Cyme dichotomous much branched, Petals obovate hairy beneath
20934 Stemless, Lvs unequally cordate obsoletely lobed acute glabrous and shining above hairy beneath, Scape very
20935 Tuberous, stemless, Leaves unequally cordate denticulate, Peduncles dichot., Wings of capsule 2 unequal
[brous, Peduncles axillary few-flwd, Capsule elongated with 2 narrow wings and the third larger
20936 Rhizoma tuberous, Stem branched bulbiferous, Lvs dimidiately-cordate acuminate angularly serrated gla-
20937 Root tuberous, Stem scandent radicant, Leaves roundish-ovate obsoletely toothed glabrous shining, Petals
serrated, Peduncles 2-flowered largest wing of capsule obtuse-angled the rest parallel small
20938 Leaves large palmate oblique at base, Stipules oblong cuspidate keeled, Male flowers with 4 sepals 2 small and
2 large, Female flowers with nearly equal petals, Racemes axillary, Peduncles long
20939 Stemless, tuberous, Leaves peltate ovate acute entire glabrous above clothed with rusty tomentum beneath,
Wings of capsule 2 roundish and 1 large and obtuse
20940 Creeping, Leaves ovate acute unequally cordate muricated above and downy beneath, Wings of capsule parallel
20941 Rhizoma creeping, Leaves cordate 7-lobed unequally toothed setosely ciliated pale beneath with reddish mar-
gins, Petioles pilose, Pets 2 rose-clrd dotted with scarlet, Cap. 3-winged one of which is large and rose-clrd
β Stemless, Leaves palmate pilose as are the tall scapes and petioles, Leaves 7 lobed, Lobes lanceolate-oblong
wavy sinuated, Flowers dipetalous, Filaments cohering at base, Wings of fruit roundish
20942 Stems short thick short-jointed a little tortuous, Leaves obliquely ovate short acuminate many-nerved entire
studded with numerous fascicles of setæ, Petioles as long as leaves beset with fringed depressed scales, Sti-
pules ovate concave dry setose, Peduncles longer than petioles beset with similar scales
20943 Leaves deeply palmate, Segments acuminate subpinnatifid deeply-toothed covered with rusty hairs beneath,
Stem short fleshy articulated unequal creeping, Panicles dense many-flwd covered with rusty down, Flowers
dipetalous glabrous as are the bracts, Sepals roundish, Wings of fruit unequal, upper angle rounded
20944 Downy, Stem thick short creeping scaly, Leaves petiolate roundish cordate much longer than the axillary
peduncles, Flowers racemosely panicled all dipetalous, Wings of capsule nearly equal
20945 Stem simple nodose muricated, Lvs alternate digitate 5 or 7 lanc acum uneq. ser. leaflets which are shining
and glandularly muricated on both surfaces, Petioles terete, Stipules none, Cymes axillary dichotomous on
long peduncles, Flowers dioecious, male ones 4-leaved, Leaflets equal reflexed in 2 series
20946 Leaves digitate about 10, Leaflets lanceolate unequally serrated scabrous, Wings of capsule roundish equal

20947 Stemless downy pilose, Leaves on short petioles obliquely cordate sinuately lobed serrated wrinkled deeply 2-
lobed at base, Lobes rounded imbricate, Scape much longer than leaves thick paniculately branched, Flowers
showy, Pets 5 obov., Fruit turbinately triq., 2 of the angles with narrow wings, the third with an elong wing
20948 Stems fleshy covered with rusty down, Leaves on long petioles concave obliquely ovate coarsely and deeply
toothed glabrous above and downy beneath, Panicles axillary covered with rusty tomentum, Bracts roundish-
ovate convex, Flowers dipetalous glabrous, Wings of fruit emarginate nearly erect
20949 Covered with brown hairs, Leaves unequally cordate palmately lobed, Scape 3-flowered, Capsule villous with
obtuse-angled wings one of which is prolonged
20950 Much branched glab., Lvs unequally cord lobed acute bluntly toothed shining pale beneath with col veins, Male
flws dipetalous, Female 5-petaled uneq., Peduncs bifid with 2-flwd branches, Wings of cap. nearly equal acute
20951 Arborescent, Leaves unequally reniform angularly lobed serrated hairy, Cymes dichotomous, Perigone downy,
Wings of capsule 2 very narrow and the third large and acute-angled
20952 Suffruticose dichotomously branched glabrous, Leaves on long petioles semicordate 5—6-cleft acute sharply
serrulated rather hairy, Peduncles terminal elongated dichotomous
20953 Stemless, Leaves obliquely ovate obtuse subreniformly peltate fleshy lobately sinuated glabrous, Petioles hairy,
Two outer sepals scarlet roundish, the rest smaller and whiter, Cap turbinate 3-winged, Wings broad uneq.
20954 Caulescent erect hoary tomentose, Leaves coriaceous peltate oblong acute subangular white beneath, Panicle
small contracted, Male flowers 4-petaled downy, Female unknown
20955 Stem fleshy nodose, Leaves unequal-sided reniformly cordate angularly serrated glabrous shining, Peduncles
axillary dichotomous few-flowered, Wings of capsule nearly equal, 2 roundish, the third acute-angled
20956 Leaves oblong cucullate denticulated glabrous, Stipules oblong-toothed, One wing of the capsule is large acute-
angled, the rest parallel [tuse, the third large and acute
20957 Suffruticose, Leaves unequally reniform clothed with rusty tomentum beneath, two of the wings of fruit ob-
20958 Lvs oblong acuminated angular serrated glabrous, Petioles thickened, One wing of capsule large obtuse-angled,
the rest acute-angled
20959 Caulescent, Leaves ovate-oblong unequally cordate acuminate denticulate rather angular outside at base, Cymes
on short peduncles extra-axillary, Capsule tetragonal
20960 Shrubby erect, Leaves nearly sessile unequally oblong-cordate undulately repand entire glabrous shining,
Cymes dichotomous, Wings of capsule rounded equal
20961 Shrubby erect-branched, Leaves on short petioles oblique at base almost equally elliptic-lanceolate glabrous
shining glaucescent beneath toothed, the teeth setose at apex, Cymes axillary few-flowered shorter than the
lvs, Petals nearly equal ovate-oblong, Dorsal wing of capsule large dotted acute, the rest almost wanting
20962 Shrubby erect, Leaves lanc. unequal-sided acum subcordate at base with crested margins glabrous and shining
20963 Subherbac., Lvs semicord. uneq toothed glab., Stips reticu. with veins, Wings of cap roundish nearly equal

History, Use, Propagation, Culture,

1997. ***Fágus antárctica*** and ***F. betuloìdes*** form a predominant feature in the Fuegian landscape. The leaves of the first resemble those of our common beech, and are deciduous; but the ***F. betuloìdes*** is evergreen, and is the antarctic

20964 Tall, Lvs obliq auricled at base obsoletely sinuated hoary tom , Peduncs elong. downy, Panicle simple many-flwd, Male flwr 4-petaled, 2 roundish and 2 smaller obl , Female flwr of 2 obov. pets, Wings of cap nearly eq.

20965 Caules., Lvs obl ac unequally cordate ser glabrous shining, Stipules ov ent., Male flws 4-petaled

20966 Shrubby, Leaves long semicordate acuminate repand spotted with white above red beneath, Wings of capsule roundish nearly equal

20967 Shrubby erect, Leaves semicordate doubly serrated ciliated, Cymes nutant ditrichotomous, Two of the wings of capsule narrow, the third large and bluntly triangular

20968 Shrubby erect, Leaves unequally cordate acuminate shining hairy rather rough, Cymes dichotomous, Wings of capsule nearly equal

20969 Leaves obliquely oblong-ovate acuminate fleshy sinuated serrated red on the margin, Stipules largo obovate concave coloured deciduous, Panicle nutant, Flws deep scarlet, Male flws of 4 roundish petals 2 of which are small, Female flws of 5—6 nearly equal ovate petals, Capsule pear-shaped with equal wings

20970 Glabrous fleshy, Stem woody decumbent, Leaves obliquely cordate repandly toothed acuminate with purple filamentose scales on nerves ben and on margins, Petioles girded by a mass of connate scales at apex ciliated, Cymes large dichotomous on long peduncs, Male and female flws both dipetalous, Wings of capsule nearly eq.

20971 Scandent, Leaves oval unequal-sided subangular serrulated plicate hairy, Cymes dichotomous, 2 of the wings of capsule very narrow and the third large and acute-angled

20972 Erect-branched smooth, Leaves semiovate obliquely falcate acute serrated ciliated, Panicle pendent, Male flws of 4 conniving petals, 2 outer ones largest and boat-shaped, Female flowers of 5 conniving petals, Pedicels triquetrous, Third wing of capsule much larger than the rest

20973 Fleshy branched humble, Stem setosely scaly, Leaves on long bristly petioles deeply cordate roundish 7-nerved repand entire scabrous above pilose on nerves beneath, Stipules cordate, Peduncles terminal corymbosely few-flowered nutant, Third wing of capsule subdeltoid roundish, the other 2 smaller

20974 Erect scabrous, Root fibrous, Leaves palmate or 3-lobed biserrated, Peduncles terminal and axillary Flowers of 2 roundish-ovate biserrated petals and 2 smaller subunguate toothed ones glabrous, Capsule villous

20975 Leaves striped like the Zebra This species is not sufficiently known.

20976 Stemless, Lvs all radical aggregate on long petioles obliquely roundish-ov short acum glandularly ser peltate conc purple beneath, Scapes longer than lvs di hotomously corymb at apex, Pedicels nutant, Male flws of 4 seps 2 of which smaller, Fem. flws of 3 seps 1 of which is small, One wing of fruit larger than the other two

20977 Stemless, Rhizoma short rooting, Leaves large obliquely cordate-ovate short acuminate crenately denticulated red beneath on thick bristly stipulate petioles the lower bristles reflexed, Scape twice as long as leaves, Flws nutant corymbose yellow, Male ones of 4 oblong-cuneate sepals one of which is larger and more concave, Female flowers small of 5 equal oblong sepals, One wing of fruit horizontally elongated and striated

20978 Stemless, Rhizoma creeping, Lvs semipeltate concave obliquely ovate angularly toothed acuminate rounded at base shining above white beneath and covered with rufous tomentum on the nerves, Petioles and dichotomous scapes coloured and covered with rufous tomentum, Flowers dipetalous, Female ones bibracteate, Wings of capsule roundish, 2 narrower green, the third a little broader crenulated and coloured

20979 Stemless, Rhizoma creep , Lvs obliqly cord margined with red angularly toothed acum. covered with coloured scales which are usually bipartite and filamentose at top on the nerves beneath and on the margin as well as scapes, Cymes dichot , Flws dipet , Two wings of cap obt -angled, the third a little broader ac -angled

20980 Stemless, Lvs nearly regular on long petioles cord ac obscurely lobed crenately ser. greenish purple blotched with white and beset with purple hairs as are the petioles, Stipules ov. acum , Scapes numerous shorter than petioles, Flws subumbel. of 4 sepals, Capsule triquetr. with short roundish nearly equal doubly cili angles

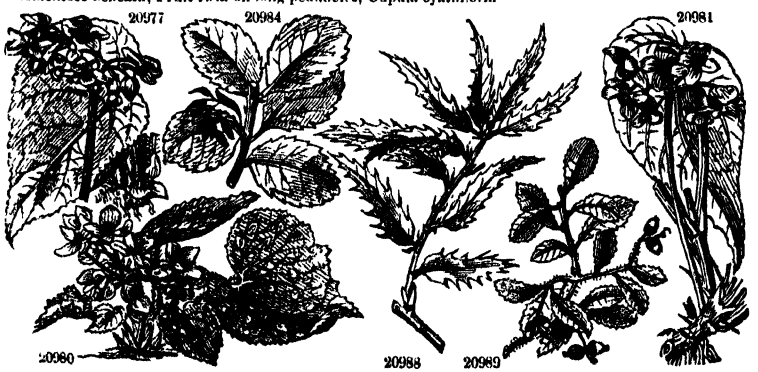
20981 Glabrous, Stem short, Leaves on long petioles obliquely ovate acuminate unequally dentate serrated with white blotches above purple beneath, Stipules large acuminate, Peduncles axillary exceeding the petioles, Flowers corymbose, Petals 4, 2 outer ones largest painted with red veins, the 2 inner ones white, Two of the wings of the fruit short and roundish, third horizontally elongated elliptic obtuse

20982 Caulescent, Leaves stalked obliquely ovate acuminate subcordate at base glossy rather hairy on margins, Panicle dichotomous drooping, Outer sepals roundish-ovate inner ones shorter and narrower, Female flowers of 5 nearly equal oblong sepals, Wings of fruit unequal

20983 Lvs obl -ov. obt. rather obliquely trunc unequally dent ser. minutely reticu. beneath when young plicate, Cupula invol -frnid deeply 4-parted, Segs unequ ent with a series of fringed scales on back, Nuts cili at top

20984 Lvs ovate-elliptic obtuse crenulate coriaceous shining glabrous rounded at base on short petioles, Male perianth solitary turbinate 5—7-lobed 10—16-androus, Cupula involucre-formed with marginate angles, Branches covered with a resinous varnish More the habit of a hornbeam than a beech

20985 Leaves ovate-oblong oblique subrhomboid obtuse doubly serrated entire at base tapering into the petiole rather pilose, Male perianth solitary hemispherical sinuated 30—40-androus, Cupula capsule-formed muricated 4-parted, Segments ovate obtuse, Ovaria enclosed triquetrous, Angles winged



20986 Lvs deltoid coriaceous coarsely and unequally toothed obsoletely nerved, Cupula capsule-formed at length deeply 4-parted, Segments lanceolate beset with soft spines tipped with glands

[with stellate down above

20987 Branchs petis and under side of lvs densely tomentum, Lvs cord.-ov. aristately toothed ac cinerous and covered

20988 Lvs ovate-lanceolate acuminate subcordate at base covered with powdery tomentum rusty beneath sinuately toothed, Teeth elongated cuspidate, Fruit by twos or fours on short peduncles

20989 Branches rather downy, Leaves nearly sessile obovate cordate remotely toothed coriaceous rugose finely tomentose beneath, Fruit twin on long peduncles, Cupula cyathiform

and Miscellaneous Particulars.

evergreen beech. They are both quite hardy, and grow to trees of large size. The Van Diemen's Land Beech is a ne evergreen tree, with coarsely toothed leaves. The wood is valuable and close grained.

History, Use, Propagation, Culture,

3266. *Ambrosínia Bássii* has a tuberous-branched rhizomatose root and cordate-elliptic entire leaves, and the scapes rise from among the petioles. The culture is the same as for the tropical species of *A'rum*.

3267. *Arisæ'ma* is composed of tuberous-rooted plants like those of *A'rum*, and should be treated like the tropical species of that genus.

3268. *Cryptocóryne*. Marsh plants with tuberous stoloniferous roots. The leaves are entire, petiolate, and feather-nerved; the inflorescence solitary and nearly sessile at the base of the petioles, or on a more or less manifest scape. The flowers are sweet-scented. The culture of the species is the same as that of the tropical species of *A'rum*.

3269 *Peltándra virginica* has rhizomatose tuberous roots and sagittate nerved leaves. The scapes are solitary and elongated, and rise from the sheath of the petioles. The culture is the same as for the other hardy species of *A'rum*.

20950 Branches tuberc., Lvs on short petioles oblong-lanc. acum. mucronate rounded at base entire coriac clothed with cinereous toment. beneath, Fruit pedunc. usually twin, Peduncs thickened, Cupula rather turbinate

20951 Branches tomentose, Leaves elliptic obtuse cordate remotely and bluntly toothed membranous tomentose beneath, Fruit on long pedancles subspicate, Cupula hemispherical

20952 Branches and under side of lvs covered with stellate down shining above lin.-obl. acute submucro. somewhat cordate undulately sublobuated rather coriaceous, Fruit solitary on a short peduncle, Cupula cyathiform

20953 Glab., Lvs wedge-shaped obov. on short petioles entire at base but slightly tthd at top, Flwrs and fruit racem.

20954 Branches downy, Lvs obov.-obl. rounded at base sharply and sinuately toothed towards the apex coriaceous shining above but clothed with canesc. down ben., Fruit usually twin on short peduncs, Cupula cyathiform

20955 Lvs smooth oblong-lanceolate serrated rather coriaceous, Fruit sessile, Cup subhemispherical, Nut conical

20956 Lvs oblong-acute entire woolly beneath, Fruit nearly sessile and usually solitary

20957 Evergreen, Branches toment., Lvs coriac. obov. petiolate cuspidate obtuse sometimes serrated at top quite glab. above but clothed with glauc. toment. beneath, Acorns spic. obov much longer than scaly tomentose cup

20958 Evergreen, Branches glabrous, Lvs petiolate coriaceous glabrous acuminate obtuse coarsely serrated beyond the middle glabrous above but clothed with glaucous down beneath, Acorns spicate spherical protruding a little beyond the cup, Cup tomentose tuberculate from scales

20959 Evergreen, Lvs roundish-ovate subcordate glabrous remotely spiny-toothed, Cupula hemispherical loose, Acorn ovate acute

[base female and top male, Spathe elliptic acute reflexed exceeding the spadix

21000 Stemless, Lvs pinnate 1—2 feet long, Leaflets alternate nearly sessile obl. ac reflexed, Spadix obtuse with the

21001 Lvs ternately compound, Lflts pinnatifid entire or divided, Scape and petioles muricated at base, Spathe oblong acuminate exceeding the spadix, Ovaria ovate reflexed tubercled

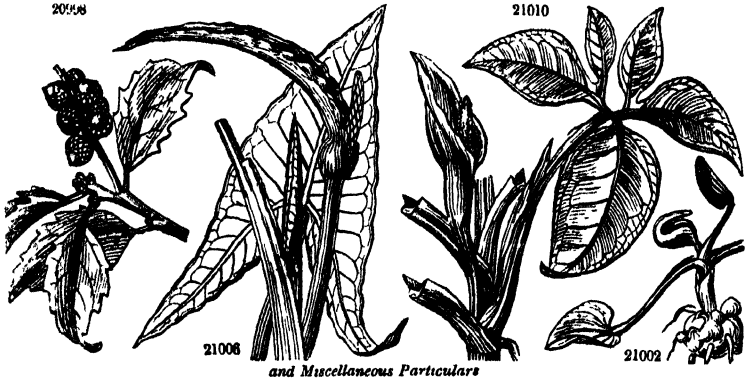
21002 Leaves radical about 4 ovate-cordate, Spathe navicular horizontal terminated by a straight tail

21003 Leaves peltate cut into 5—6 ovate-lanceolate acuminate feather-nerved segments, Lower part of spathe green connate with the tube, upper part ovate convex pointed white with a transverse red mark

21004 Leaves pedate 6—7-parted, Scape purple, Spathe purple or pink 5—6 inches long obovate-oblong

21005 Leaves oblong-lanceolate, Spathe pedunculate long tubular fringed at top

21006 Stemless, Lvs hastately cordate acute, Lobes obtuse, Spadix male-flowered at top



21007 Caulescent, Leaves cordate-sagittate, Spadix contracted in the middle shorter than the spathe

21008 Lvs pedate, Leaflets lanceolate horizontal, Spathe subterete inflated lanceolate at top acute, Spadix acuminate, Petioles a foot high variegated with brown spots

21009 Stemless, Leaves sagittate acute rounded at base

21010 Caulescent radicant, Leaves deeply tripartite, Lateral segments auriculed on the outside at base, Petioles winged below, Spathe exceeding the spadix

21011 Stem twining suffrutescent, Lvs ovate-lanceolate acuminate, Sheaths petiolar long equal to scape, Spathe whitish brown

and Miscellaneous Particulars

21010 *Xanthosòma* are West Indian caulescent plants with sagittate leaves and yellowish spathes. Their culture is the same as that for the caulescent tropical species of *Pothos*.

21011 *Acóntias* are South American plants with rhizomatose tuberous roots and pedate leaves, naked elongated peduncles and green spathes. Their culture is the same as for the tropical species of *Arum*.

21012 *Syngónium auritum* is a tropical herb having the rhizoma changed into a scandent elongated stem and 5-parted leaves. The peduncles are short and naked, and the spathes are of a dirty yellowish green. The culture is the same as for the tropical caulescent species of *Pothos*.

21013 *Cuicàsia scándens* is a tropical African herb with scandent stems, ovate-lanceolate acuminate leaves, and brownish spathes. The petiolar sheaths are equal to the spathes. The culture is the same as for the tropical caulescent species of *Pothos*.

3274. 2005*i*. PHILODE'NDRON *Schott*. PHILODENDRON. (*Phileo*, to love, *dendron*, a tree; epiphytal.) *Aroideæ*.

History, Use, Propagation, Culture,

3274. ***Philodéndron*** is a genus of tropical plants having the rhizomas changed into scandent or subarborescent stems The leaves are large, remote, and often lobed The culture is the same as for the tropical species of *Pothos*
3275. *Spathicárpa hastifŏlia* is a South American herb, with a solitary radical hastately 3-lobed membranous reticulately veined leaf on a long stalk, and slender erect scapes. Culture the same as for the tropical species of *A'rum*
3276. *Dieffenbáchia seguina*. This is a tropical plant with a thickish erect stem and oblong-ovate nerved leaves The peduncles are short and recurved in the fruit-bearing state. The culture is the same as for *Pothos*
3277 *Antherúrus* Stemless herbs with tuberous roots, and triparted leaves on long petioles. The scapes are solitary, and sometimes bear bulbs as do the petioles. The spathes are narrow, green, and striated Culture the same as for hardy species of *A'rum*.

21012 Caulescent radicant, Leaves cordate sinuately pinnatifid

21013 Caulescent radicant, Lvs cordate-oblong sagittate, Petiole semiterete marginate, Spadix acute, about equal to the spathe which is cucullately cylindrical contracted in the middle and ventricose at base [apiculate length of spadix

21014 Caulescent radicant, Lvs petiolate lanceolate acuminate with a very thick inflated midrib, Spathe obtuse cucullate

21015 Caulescent radicant, Leaves hastate 3-parted subcordate with an open recess, Lobes oblong acuminate wavy divergingly veined, Style fleshy, Stigma membranous rayed Cells of fruit 1 ovulate

21016 Stemless, Lvs on longish petioles ovate-lanc. acute rounded at base finely ribbed coriaceous deep green shining paler beneath, Midrib thickened, Petioles thick shorter than leaves, Spadix on short peduncles, Spathe convolute at base exceeding the spadix a little

21017 Stemless, Lvs lanceolate veinless, Leaves 2 feet longer than scape, Spathe bluntish red outside and white inside and on the edges

21018 Caulescent radicant, Lvs shining cordate-sagittate acute, Petioles terete, Spadix obtuse about equal to spathe which is cucullately cylindrical constricted in the middle and ventricose at base

21019 Caulescent radicant, Leaves on long petioles ovate-elliptic cordate at base rounded at top entire or deeply crenated 5-nerved at base, Petioles longer than leaves thickened a little at base

21020 Stemless, Leaf radical solitary on a long petiole hastately 3-lobed membranous reticulately veined, Petioles sheathing at base, Scape slender erect exceeding the leaves, Spathe linear

21021 Stem thickish erect, Leaves oblong-ovate cuspidate, Peduncles short reflexed when bearing the fruit

β Leaves spotted and blotched with white and yellow

21022 Leaves ternate, Scape longer than the bulb-bearing petiole

21023 Caulescent, Leaves oblong with risen veins, Spathe yellowish green and lined lengthwise white and varnished inside

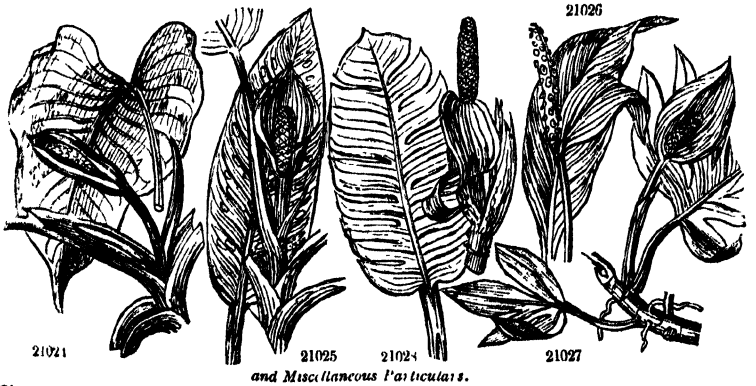
21024 Caulescent, Lvs subsagittately cordate acuminate, Lobes rounded and divaricate, Spadix cylindric, obtuse equal to the beak-shaped spathe, Anthers many-celled

21025 Leaves obliquely ovate-cordate pertuse, Spathe boat-shaped

21026 Lvs obovate-lanceolate acuminate at both ends ribbed, Spathe oblong acuminate flat subpetiolate sheathed about equal to the spadix

21027 Shrubby radicant, Lvs ovate on long petioles cordate acuminate shining glaucous beneath irregularly pinnate, Segments oblong-falcate acuminate 3—5-nerved, Spadix axillary solitary on long peduncles

21028 Caulescent radicant, Lvs elliptic-oblong cordate on long petioles pinnate, Segments linear-falcate cuspidate 3—4-nerved, Spadixes axillary and lateral on short peduncles



21029 Caulescent radicant, Leaves on long petioles oblong acuminate entire, Spadix nearly terminal pedunculate, Flowers subtetrandrous

21030 Leaves ovate pinnate filamentosely fibrous at base, young ones entire, Spathe ovate-oblong acuminate erect, Spadix oblong cylindrical obtuse

21031 Caulescent radicant, Outer branches leaflets whip-formed and pendulous, Leaves ovate-cordate entire or pinnatifid, Segments subensiform 1-nerved

21032 Caulescent radicant, Leaves petiolate oblong-cordate cuspidate, Spadix terminal solitary on short peduncles, Flowers suboctandrous

21033 Caulescent radicant, Leaves on long petioles cordate perforated on one side and pinnatifid on the other, Spadix on short peduncles, Spathe gibbous exceeding the spadix, Flowers subtetrandrous

and Miscellaneous Particulars.

3278 *Aglaonèma* is a genus of erect tropical caulescent herbs, with oblong nerved leaves, having the petioles sheathing even to the very top. The peduncles are very short, and the spathes are white and sweet-scented. Culture of *Pothos*

3279 *Homalonèma* are subcaulescent herbs with cordate or sagittate leaves, short peduncles, and aromatic spathes. Culture the same as for the tropical caulescent species of *Pothos*.

3280 *Monstera* Caulescent scandent radicant plants, with simple leaves, cultivated in the same manner as tropical species of *Pothos*.

3281 *Scindápsus*. Caulescent scandent plants, similar to *Monstera*, and requiring the same treatment.

History, Use, Propagation, Culture,

3282. *Sauromàtum*. Tropical herbs having globose fleshy tubers and short radical scapes, which are solitary and scaly at base. The leaves are pedate-parted and many-lobed. Culture of tropical species of *A'rum*.

3283 *Dracúnculus*. Stemless plants with globose tuberous roots and pedate-parted leaves. The petioles are dilated and stem-clasping at the base. The scapes rise from sheaths of the inner leaves. The spathes are fetid Culture of *A'rum*.

3284. *Pythónium*. Stemless herbs with flattened, nearly globose, tuberous roots, with generally a solitary bipinnatifidly compound leaf, longish erect scapes which are sheathed at base, and reticulated spathe inclosing the spadix. Culture the same as for the tropical species of *A'rum*.

3285. *Amorphophállus* is a genus of tropical herbs, with flat tuberous roots, decompound leaves, and radical scapes Culture same as for tropical species of *A'rum*

3286. *Remusàtia vivípara* Stemless succulent herbs with tuberous rhizomatose roots, having the branches elongated and bearing bulbs The leaves are petiolate and peltate caudate acuminate, the peduncles are short, and bracteate, and the spathes yellow. Culture of tropical species of *A'rum*.

3287. *Colocàsia*. Herbs with tuberous roots, or shrubs with stems. The leaves are peltate.

21034 Stemless, Lvs simple ternate and pedate, Leaflets 5—9 oblong acuminate entire, Spathe ventricose at base connate with a flattish lamina exceeding the spadix

21035 Nearly stemless, Lvs pedately many-parted, Lobes oblong acuminate, Spathe irregularly undulately repand at the mouth of the tube

21036 Lvs pedate-parted, Segments uniform lanceolate middle one the largest, Spathe furrowed inside warted, Spadix smooth at apex

21037 Lvs ternate on long petioles, Lflts pinnatifid, Segms ovate acute entire or divided, Scape and petioles muricated at bottom, Spathe oblong acum much exceeding spadix, Ovaria ovate attenuated reflexed tubercled

21038 Tuber depressed, Leaf large solitary tripartedly cut several times petiolate, Secondary segms lanceolate acuminate, Outer segments pinnate, Scape variegated with purple involved in two membranous scales at base, Spathe thick boat-shaped convolute at bottom cucullate at top, Spadix clavate length of spathe

21039 Petioles rough from warts, Spathe ovate acute spreading equal to conoid spadix

21040 Petioles rough from warts, Spathe ovate bluntish spreading at top exceeding a little the cylindrical fusiform spadix

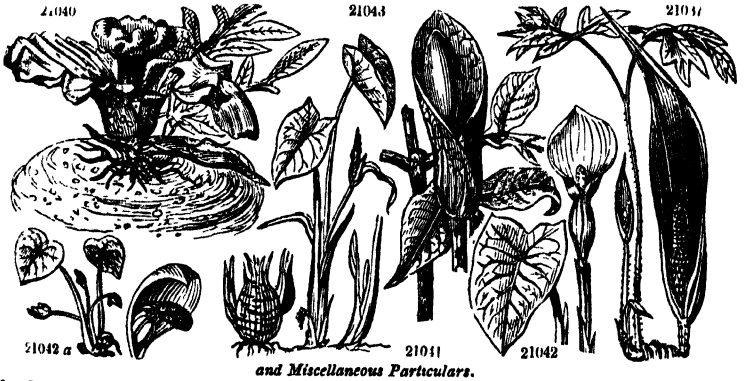
21041 Petioles smooth, Rachis of leaves bearing bulbs, Spathe ovate obtuse cucullate equalling the obtuse clavate spadix

21042 Rhizoma tuberous throwing out elongated bulb-bearing leafless branches, Lvs on long petioles peltate cordate acuminate, Peduncles short bracteate, Spathe yellow

21043 Stemless, Leaves peltate ovate repand semibifid at base, Scape shorter than petioles, Spathe much longer than spadix, Anthers many-celled

21044 Stemless sarmentose, Leaves on long petioles peltate cordate acuminate, Spadix terminating the scape, Spathe yellow

21045 Lvs cordate sagittate entire or tripartite, Lobes with a prominent angle outside at base, Spathe ovate-lanceolate reflexed at apex equal to the awl-shaped spadix, Rudimentary organs glomerate bristle-formed



21046 Lvs linear-lanceolate, Spathe erectly incurved, Spadix elongated filiform obtuse nutant

21047 Soboliferous, Pinnula obliquely triangular cuneate downward, drawn out on the outside, unequally and deeply jagged in front, Male flowers with 12—18 stamens, Berry globose depressed 1-seeded

21048 Caudex and fronds very spiny

21049 Caudex humble slender annulate, Fronds pinnate, Leaflets sinuately fiddle-shaped with a solitary primary nerve erosely and doubly toothed white beneath

21050 Caudex a little tumid above, Lvs pinnate, Pinnæ coriaceous plicate entire bifid at top covered with silvery powder, Spathe solitary deciduous, Spadix compound pendulous hermaphrodite above and mixed with male flowers, Lower female flowers subdodecandrous, Berries globose

and Miscellaneous Particulars.

3288 *Gonatánthus sarmentósus* is a stemless sarmentose herb, with peltate cordate acute leaves on long petioles, and a yellow spathe. Culture of *Póthos*.

3289 *Typhónium* Stemless herbs with rhizomatose tuberous roots, and cordate or hastate nerved long-stalked leaves The scapes are elongated, and rise from the sheathed bases of the leaves. Culture as for tropical species of *Arum*.

3290. *Bidrum* is a genus of European humble stemless herbs, with tuberous rhizomatose roots, and lanceolate or ovate undivided feather-nerved leaves on long petioles, petioles membranous, dilated, and sheathing at base The scapes are usually solitary, rarely aggregate. The spathes are dirty green outside and purple inside, as well as the naked top of the spadix. Culture the same as for hardy kinds of *Arum*.

3291 *Ordóna porphyrocárpa* is a slender palm tree with annulate unarmed caudex and pinnate fronds. The pinnæ are cuneate and a little lobed, and erosely toothed. The fruit is red, about the size of an olive.

3292 *Iriártia andícola* is a palm tree having a very tall unarmed annulate cylindrical caudex tumid in the middle, pinnate fronds, cream-coloured flowers, and yellowish brown fruit.

History, Use, Propagation, Culture,

3293. *Desmóncus* is a genus of Brazilian palms, with reed-like flexuous stems and sometimes scandent, all of them supported by other plants. They are all furnished with large straight or hooked prickles. The fronds are scattered distantly on all parts of the stem or caudex, and they are remotely pinnate. The petioles are furnished with long sheaths, and are extended into strong tendrils with recurved hooks by which they hold by other plants. Flowers cream-coloured. Drupes red.

3294. *Juba'a.* Tall palm trees, with thick stems, beset with the scale-like rudiments of the petioles. The spadix is branched. *J. spectábilis* is called *Coquito* in Chili, and is cultivated in gardens about Popayan for the sake of the nuts, which are edible.

3295. *Attálea* is composed of tall or middle-sized palm trees, which are often prickly. The fronds are large and pinnate, and very neat. The spadixes rise from the bases of the fronds, and are simply branched, but in the fruit bearing state they are large, and droop from the weight of the fruit. The flowers are cream-coloured, the fruit is brown, and the nuts are edible.

MONADELPHIA.

[much branched erect, Male flowers twin triandrous uniserial, Fruit oblong

21051 Unarmed, Stem tall stoloniferous, Pinnæ oblong-linear, Upper ones usually confluent truncate toothed, Spadix
21052 Caudex tall, Petioles densely clothed with brown hairs inside and rachis with brown scales, Pinnæ linear-lanc. acute at length bifid at apex, Spathe toment., Spadix flexuous at base, Male flwrs 12-androus, Fruit obl.
21053 Unarmed, Caudex tall, Margins of petioles and nerves reddish, Pinnæ narrow-lanceolate acuminate at length equally bifid, Spadix fastigiate, Male flowers hexandrous, Fruit ovate-conical beaked
21054 Caudex tall, Petioles and rachis prickly, Pinnæ linear-lanceolate acuminate glaucous beneath with setose edges, Spadix and spathe prickly at base straight, Male flowers hexandrous, Fruit ovate-globose beaked
21055 Unarmed, Caudex middle-sized, Pinnæ linear-lanceolate, terminal one præmorse, Ribs and rachis beset with blood-red dots beneath, Spadix much branched, Fruit ovate

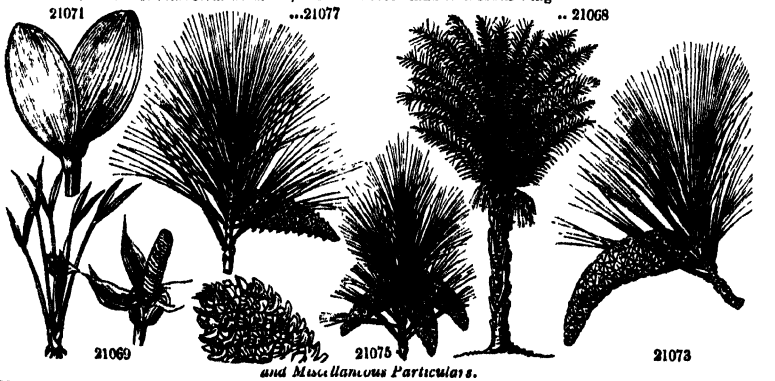
21056 Subscandent, Petiolar sheaths as well as hind part of rachis prickly, Prickles straight compressed, Tendrils hooked, Pinnæ oblong-lanceolate acuminate, Inner spathe unarmed, Fruit pea-formed
21057 Petiolar sheaths beset with hooked prickles as is the rachis, Tendrils hooked, Pinnæ oblong tapering to both ends, Inner spathe prickly, Prickles nodose at base, Fruit globose
21058 Prickles on petiolar sheaths straight thickened at base, those of the rachis hooked, Tendrils hooked, Pinnæ oblong-lanceolate acuminate, Inner spathe very prickly, Fruit obovate

21059 A very pretty palm cultivated in Kew Gardens, but we know nothing else about it
21060 Caudex tall thick, Fronds pinnate, Spadix branched, Rudiments of petiole scaly

21061 Humble, Fronds erectly spreading, Fruit elliptic umbonate
21062 Caudex middle-sized thick often wanting, Fronds spreading, Base of petioles naked, Drupe obovate beaked
21063 Caudex tall, Fronds erect, Base of petioles fibry, Drupes elliptic

21064 Caudex very tall, Fronds erectly spreading, Drupes oblong rather 5-angled acute
21065 Caudex very tall, Fronds erectly spreading, Drupes ovate-oblong conically beaked
21066 Caudex short 3—4 feet or wanting, Fronds erectly spreading, Drupes ovate umbonate, Fronds 18—20 feet

21067 Fronds large entire oblong serrated, Calyxes jagged



21068 Petioles unarmed, Pinnæ linear-lanceolate acuminate entire or emarginate and subdenticulate biauriculate at base white and silvery beneath, Lower auricle largest, Branches of spadix elongated fastigiate pendulous

21069 Leaves deeply bipartite, Segments lanceolate-linear acuminate

[*D. austrâlis*

21070 Lvs narrow-lanceolate acuminate subfalcate thin willow-like 5—6 in long, Cone smaller and more rigid than in
21071 Lvs oblong rounded at top 4 inches long, Cones oblong cylindrical 3 inches long, Tops of scales convex closely pressed 4 times broader than long, Timber valuable
21072 Lvs large ovate-lanceolate acute 7 inches long, Cones spheroid 4 inches long, Tops of scales flat closely pressed 5 times broader than long

21073 Lvs in fives long, Cones pendulous solitary curved, Scales rounded at apex rhomboidal abruptly umbonate in middle obtuse smooth, Seeds ovate 5 times shorter than blackish wing
21074 Lvs in fives long Cones elongated horizontal verticillate straightish sessile, Scales rhomboidal at apex pyramidal obtuse, Seeds oblong 4 times shorter than their blackish wing
21075 Lvs in fours 6 inches long, secondary one narrowest primary ones membr. elong. scar, Scales transv., of apex depressed in middle umbonate and keeled, Seeds roundish wedge-shpd 4 times shorter than testaceous wing
21076 Branches stiff thick, Scales of bud linear ciliated, Lvs in fives 1½ foot long triangular, Sheath long smooth, Cones elongated obt., Scales with lozenge-shaped depressed pyramidal apexes terminated by an obt. mucrone
21077 Lvs in fives very long, Cones straight horizontal ovate elongated solitary, Scales transverse at apex rhomboidal uncinate, Seed subrhomboidal wrinkled, 4 times shorter than testaceous wing

and Miscellaneous Particulars.

3296. *Manicaria* is a middle-sized palm tree. The fronds are 15—20 feet long on unarmed petioles, which are beset with short brown hairs. The spadix is 2—3 feet long. The flowers have a very strong narcotic smell. The spathe is 3—4 feet long, fusiform or compressed, tapering to both ends, and terminated by a 2-edged echinate mucro.

3297. *Arénga saccharífera.* This palm has various uses: the fibres of the petioles are twisted into ropes, the mealy medulla of the trunk is used for the preparation of sago, and the saccharine juice of the spadix is made into sugar. The berries are full of stings.

3298. *Cyclánthus.* A stemless plant nearly related to *Carludóvica.* The leaves are all radical, on long petioles, and bifid and plicate. The peduncles are radical, and shorter than the petioles. The spathes are entire or 2-lobed and deciduous. The plants are of easy culture, and require shade and moisture.

3299. *Dammara.* This genus is the same as *Agathis* No. 2011. The species are all broad-leaved coniferous trees, which furnish very valuable timber. They are all of easy culture, and can be increased by cuttings.

History, Use, Propagation, Culture,

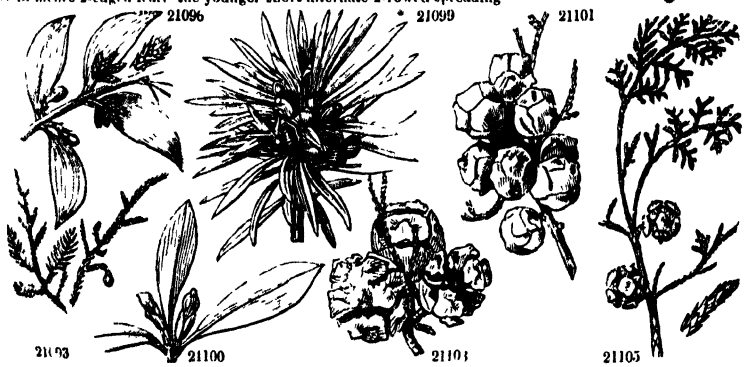
21086. *Pinus Fremontiàna*, or Nut Pine. The kernels of the seed are pleasant in flavour and very nutritious, and they constitute the principal subsistence of the Indians who live in the mountains where the tree grows, for six months out of the twelve The shell of the seed is so thin that it can be broken between the thumb and finger

21089. *Abies jezoénsis*, or Jezo Spruce, is so called because it grows in the islands of Jezo and Krafto in Japan whence it has been introduced to the gardens of the wealthy inhabitants of Jedo. Siebold describes it as a large tree, with a soft light wood, employed by the Japanese for arrows, and in the construction of domestic utensils. The plant is now introduced into England by Messrs. Standish and Noble. The leaves are of a bright green when young in two rows; about 1½ inch long and a line and a half broad; soft when young, but stiff when old, and terminated gradually by a distinct spine. The branches, when young, are covered with rusty down, but, when old, become smooth The cones are narrow, tapering, rather more than 6 inches long.

21092. *Cèdrus Deodàra*, or Indian Cedar, furnishes an excellent timber, and possesses all the qualities attributed by the ancients to Cedar of Lebanon. It is very compact and resinous, and has a fine, fragrant, refreshing smell, and

21078 Lvs in fives slender glaucescent, Cones oval verticillate horizontal, Scales rhomboidal at apex pyramidal erect with a transverse elevated line, Seed oval 4—5 times shorter than blackish wing
21079 Lvs in fives short slender glaucous, Cones pendulous verticillate ovate acute, Scales rhomboidal pyramidal straight sometimes prolonged and contracted in the middle, Seed oval 4 times shorter than the linear wing
21080 Lvs by fives 14 inches long triquetrous strong serrulated with rather long subscarious sheaths, Cones sessile solitary pendulous very long, Scales rhomb-tetragonal wrinkled, Wing 2-lobed longer than the seed
21081 Lvs by fives slender very minutely serrulated very long with scaly subscarious sheaths, Cones usually solitary pendu ov.-oblong, Scales rhomboid hardly pyram. wrinkled obt., Seed small with a sublanc. obt. wing
21082 Lvs by fives filiform triquetrous 8—10 inches long with rough angles and terete glabrous sheaths, Cones pedunculate pendulous 4—5 together ovate obtuse, Scales truncate ribbed recurved and obtuse at top
21083 Lvs in threes Cones ovate with unequal sides, Scales cleft radiately truncate with a depressed umbilicus gibbous somewhat recurved
21084 Lvs in threes, Cones oblong with unequal sides, Scales quadrangular truncate at apex with a depressed umbilicus, those at base larger elevated and conical
[long with 6—7 rows of scales, Scales ruded those at base rather hooked each scale containing 2 wingless seeds
21085 Lvs in threes ½ inch long stiff twisted pale green, Brnchs vert 5 or more in a whorl, Cones sol. sessile 3 inches
21086 Lvs in twos or threes or even solit glauc green 1½ to 3 inches long stiff ending in a spiny point, Sheaths very short and rolled backwards, Brnchs in whorls, Cones 2½ inches long with from 6—7 rows of scales, Scales thick larger ones near the middle bluntly pyramidal slightly angular and more or less recurved downwards, Seeds wingless oblong or egg-shaped ¼ inch long dark brown with a thin shell
21087 Lvs in threes, Cones ovate with unequal scales, Scales wedge-shaped flattened mucronate, those at base elongated compressed recurved
21088 Lvs in threes resembling those of Pinaster 11 inches long, Sheaths slightly shaggy, Cones 3—4 together slightly pendulous 6 inches long, Scales largest in the widest part of the cone all elevated in the centre

21089 Lvs green distich mucronate, Cones narrow 6 inches long, Scales loose rounded convex
21090 Lvs linear acute entire distich, Cones roundish-oval, Scales trapeziformly cordate, Bracts length of scales spatulate-oblong sharply toothed, Wing of seed plicate



21091 Lvs in tufts, Cones ovate abrupt, Scales adpressed, Crest of anther ovate flat erect
21092 Lvs in fascicles glaucous acute triquetrous, Cones twin oval-oblong erect

21093 Lvs lanceolate all spiny mucronate imbricate in 5 ranks or linear-lanceolate tumid falcate elongated distichly and horizontally spreading, Fruit terminating the short drooping branches
21094 Lvs linear-lanceolate mucronate glaucous beneath

21095 Lvs pectinate linear-lanceolate acuminate falcate [tacle narrow covered with scattered bracts
21096 Lvs ovate-lanceolate acuminate, Male catkins in fascicles axillary on a common peduncle, Nut globose, Recep-
21097 Lvs coriaceous lanceolate acute, Peduncle solitary 1-flowered length of receptacle, Drupe globose oblique bluntly mucronate [the obov. 2-lobed receptacle, Fruit oblong obliquely and bluntly apiculated
21098 Lvs stiff linear mucr. with a double glauc line beneath very like those of the Yew, Peduncles solitary shorter than
21099 Lvs lanceolate acum. glabrous with revolute margins, Male aments by threes 4 times shorter than the leaves

21100 Leaves lanceolate obtuse mucronate, Peduncles solitary 1-flowered, Drupe length of receptacle with an obtuse hardly oblique point.

[or alternate, Cones in clusters of 6—8 scales which are nearly 4-sided with elevated centres many-seeded
21101 Leaves bright imbricate in 4 rows in old plants but expanded and awl-shaped in seedlings, Branches opposite
21102 Lvs ovate-obtuse imbricate in 4 rows, Berries globose, Scales umbonate, Branches terete tom divaric spread.
21103 Leaves ovate-imbricate in 4 rows grass-green closely set in old plants, but expanded and awl-shaped in seedlings, Branches spiral alternate or opposite dense, Cones 3—4 together oblong 1½ inch long of about 10 scales, the largest of which are in the middle, Seeds large dark brown
21104 Leaves ovate-lanceolate taper-pointed pungent scarcely a line in length. A tall tree called Mexican Cedar
21105 Branches 2-edged leafy the younger short alternate 2-rowed spreading

and Miscellaneous Particulars.

is much used in the Himalayas in the construction of buildings, and for bridges and boats. It is much cultivated in Britain as an ornamental tree It has also been successfully grafted on the Cedar of Lebanon

21094 *Podocárpus Totárra* is regarded with great esteem by the New Zealanders when growing. The wood is used to construct canoes, it being light, tough, and durable. It grows from 20 to 60 feet high, and the diameter of the trunk is from 6 to 18 feet *P ferruginea* is called *Miro-Maori* by the natives of New Zealand. It grows from 50 to 60 feet high Its wood is brittle, close-grained, and durable, of a red colour, and capable of receiving a high polish The fruit is eaten by wood-pigeons. *Podocárpus Yácca* furnishes most beautiful grained wood

21105 *Cupréssus funèbris* is, perhaps, the most interesting coniferous tree yet introduced into this country; and will, probably, displace the weeping willow. A figure of it is given in Lord Macartney's "Embassy to China," where it forms a weeping tree in the foreground of a view of the "Vale of Tombs,"—a place situated in the inclement climate of Zhe-kol. It is used to adorn cemetories.

History, Use, Propagation, Culture,

3301. *Callitris* A pretty coniferous tree, and may be increased by cuttings or seed.

3302. *Phyllócladus rhomboidālis* is a native of Van Diemen's Land, where it is called by the colonists Parsley-leaved, or Adventure Bay, Pine. *P. trichomanoides* is a native of New Zealand, and is called *Tanekaha* by the natives, who use the wood for building purposes, and the bark for dyeing a red colour.

3303. *Widdringtònia cupressoides.* This is a very pretty tree, and is the cypress of South Africa.

3304. *Saxegothæ'a conspícua* is an evergreen tree, about 30 feet high, with the habit of *Táxus.* The leaves are linear and flat, and marked with a pale double line beneath.

3305. *Frenēla* is a genus composed of resinous trees or shrubs. The leaves are ternately verticillate, scale-formed, adnately decurrent, persistent, and glandless. Being natives of New Holland they require protection, and may be increased by cuttings

3306. *Fitzróya patagónica* is a graceful drooping evergreen tree with the habit of *Libocèdrus tetragòna* When young, the leaves are spreading and linear; when old, they become triangular, sessile, and closely imbricated scales. The female flowers are terminal and stellate cones, remarkable in having the axis terminating in three short clavate glands or abortive scales. The fruit is of 9 scales, 3 in each whorl; the middle 3 are alone fertile, and each fertile scale has 3 erect seeds surrounded by a broad wing and ending in a narrow neck.

21106 Branchlets compressed spreading, Leaves rhomb-ovate adpressed imbricate in 4 rows tuberculed in middle, Cones oblong nodding, Seeds obcordate

21107 Leaves flattened articulated, Female catkin tetragonal with 4 oval valves each furnished with a point and 2 of which bear seed only

21108 Fronds rhomboid lined deeply serrated, Lower ones cuneate decurrent

21109 Fronds pinnate, Leaflets cuneate deeply lobed, Lobes truncate toothed

21110 Branches elongated fastigiate, Leaves on branches acute distant spreading, those on the branchlets bluntish more approximate and adpressed arranged in 4 rows, Fruit nearly globose, Scales of strobile thick terminated by a conical mucrone, Seeds 10 in a double series

21111 Branches erectly spreading rather drooping, Leaves in young plants strong and elongated linear spreading flat sessile glaucescent, in more adult trees short and triangular acutish adpressed on the pendulous branches subimbricate and cypress-like, Fruit subglobose

21112 Habit of Yew, Leaves linear flat apiculated marked by a pale double line beneath

21113 Resembles an Evergreen Cypress

21114 Habit of Cypress, Branches thin articulated, Lvs imbricate adpressed, Female catkins small solitary terminal

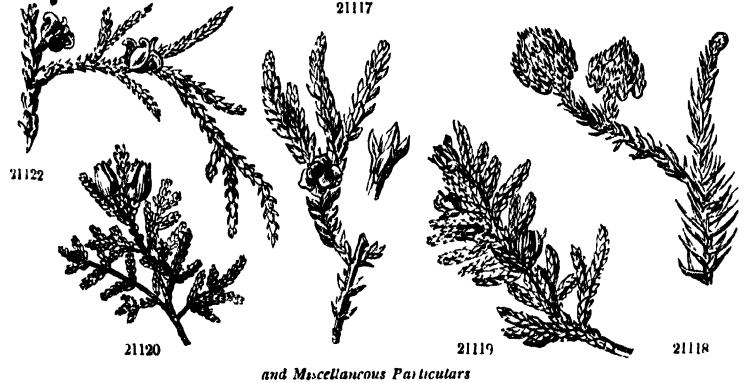
21115 Leaves linear crossing appressed, Branches very slender

21116 Habits of *rhomboidea*, but the catkins are much longer

21117 Tree evergreen drooping, Leaves sessile imbricate, Female flowers of 9 scales in 3 series stellate

21118 Tall Leaves like those of *Araucaria Cunninghàmi* but larger subulate disposed in 5 rows vertically compressed hardly 1 inch long, Male aments aggregate into a terminal spike, Seed solitary globose

β A small stunted variety



21119 Leaves opposite scale-formed, so placed on the branches as to constitute a 4-sided arrangement, Cones consist of 2 opposite pairs of scales each having a long horn or beak

21120 Habit of Arbor Vitæ, Leaves opposite ovate-oblong scale-formed decussate imbricate in 4 rows, Cones oval-oblong of 4 scales, Seed winged at top

21121 Leaves pectinate on the young branches linear mucronate, adult leaves small compressedly triquetrous distich closely imbricate keeled obtuse concave above, Branches opposite flattened

21122 Branches pendulous filiform terete tetragonal at top, Lvs spreading acute, Scales of strobile roundish bluntly mucronate at apex recurved 1-seeded, inner one abortive, Seed wingless

21123 Branches flattened imbricate, Leaves in 4 ranks smaller than in other species

and Miscellaneous Particulars

3307 *Cryptomeria japónica*, or Japan Cedar, is a fine evergreen perfectly hardy tree. Thunberg, who was the first to make this tree known in Europe, states that it is found, both cultivated and spontaneous, on the mountains of Nagasaki and elsewhere The Japanese call it *San*, or *Sugi*, which, in their language, means evergreen tree. It is a tall upright tree, with a pyramidal head. The timber is said to be soft, and easily worked; and is used for various purposes, particularly for cabinetwork, among the Japanese According to Siebold, it is a majestic tree, growing from 60 to 100 feet high Nothing was known of the living plant, until Mr. Fortune succeeded in obtaining seed at Shanghae in the North of China, where it had probably been introduced from Japan; and from these seeds the first plants were raised in Britain.

3308 *Libocèdrus tetragòna* promises to outvie the *Araucària imbricàta*, and to be as hardy, for it comes just below the snow-line in the Andes of Patagonia. The leaves are rather broad, and are imbricate in four ranks. It is a magnificent evergreen tree *L. chilénsis* is a fine evergreen tree, resembling the Chinese Arbor Vitæ but is of a less robust habit, and will probably, prove hardy *L. Doniàna* is a tree from 30 to 40 feet high, and is called *Kawa* by the New Zealanders. Its trunk is from 1 to 3 feet in diameter. The wood is beautifully grained and heavy, and would make handsome picture-frames if they were required of a deep colour.

3309 *Biota*. The species are very showy coniferous trees, of easy culture.

History, Use, Propagation, Culture,

3310. *Codiæ'um.* This genus is separated from *Crôton* They are Asiatic trees, with alternate, entire, glabrous shining leaves, which are sometimes beautifully variegated. The flowers are disposed in unisexual, axillary or terminal racemes, each of which is furnished with a bract. They are of easy culture, and only require the treatment of ordinary stove shrubs.

21128 *Sterculia pubéscens* There is a gum collected from this tree resembling gum Tragacanth in its properties

---

Page 816. CLASS XXII. — DICŒCIA.

Order 2. DIANDRIA. Stamens 2.

3311 2044*a*. *Gynèrium.* Spikelets 2-flowered, one flower sessile, the other stalked —Male Glumes lanceolate membranous Keel unequal Paleæ 2, membranous, 1-nerved, concave, beardless, upper one shortest, bicarinate Stamens 2 Scales 2, minute, collateral —Female. Glumes 2, upper one longest Paleæ 2, upper one beset with long hairs, inner one small, bicarinate Keels pectinately ciliated Stamens 2, effete. Ovaria 2, glabrous Styles 2 terminal Stigmas plumose. Scales 2, membranous, subciliated

Order 5. PENTANDRIA. Stamens 5.

3312. 2066*a* *Cordìa* Male plant unknown. — Female flowers having the calyx tube adhering to the ovarium Limb 5-cleft, valvate in æstivation, persistent. Segments lanceolate, deciduous. Petals 5, epigynous Disk fleshy glandular Ovarium 2-celled, inferior. Style simple Stigma capitate, lobed. Drupe dry, spherical, brittle shell umbilicate, villous Seeds solitary in the cells.

Order 6. HEXANDRIA. Stamens 6.

3313 2084*a* *Cocsinium* Sepals and petals in threes — Male flowers with 6 stamens. — Female flowers with 3 ovaria. Styles slender Berries 1—3 together. Seed pierced by a large hole.

3314 2085*a*. *Hilmia* Dicœcious, rarely monœcious —Male Perianth rotate or urceolately campanulate Stamens usually 6 sometimes only 3 —Female Perianth 6-cleft, with equal spreading or reflexed segments. Styles combined into a column, or wanting. Stigmas 3, entire, or 2-lobed Ovarium triangular, 3-celled. Capsule triquetrous, 3-celled Cells 2-seeded Seeds winged at base

3315. 2086*a* *Lusc'a* Flowers covered by bud-scales Perianth 4—5—6-parted.—Male Stamens 6 of which 4 or 2 are biglandular Anthers introrse, 4-celled dehiscing by as many ascending valves —Female Sterile stamens 4, submucronate. Style short Stigma discoid, lacerated Berry 1-celled, 1-seeded, naked, standing on thickened pedicels.

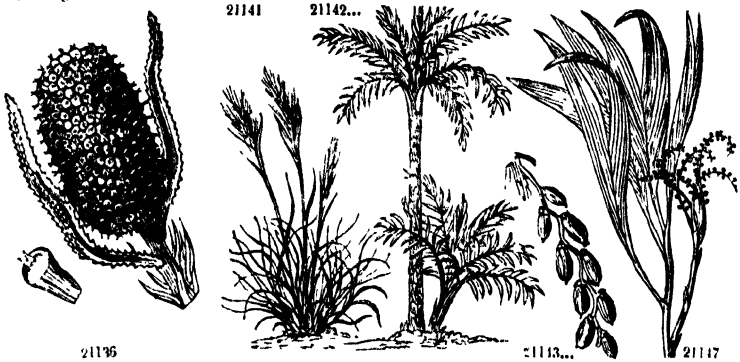
Order 8 ENNEANDRIA Stamens 9.

3316. 2089*a* *Anâchaxis* Calyx 3-parted Petals 3 —Male with ovate-oblong sepals, and linear petals Stamens 9. Filaments combined into a column at base —Female flowers with a long filiform tube, 3 abortive filaments at base ligulate stigmas. Capsule 1-celled, few-seeded

3317 2090*a*. *Tetranthèra.* Dicœcious, rarely hermaphrodite Perianth 6-parted, nearly equal, deciduous sometimes fewer or wanting altogether Stamens 9, in 6-cleft flowers, in three series, fertile in petaloid or naked flowers 12—21, the inner ones furnished each with 2 sessile or stipitate glands at base Anthers introrse, 4-celled, dehiscing by as many ascending valves. Ovarium immersed in the tube of the perianth. Style short. Stigma peltate Berry 1-seeded.

21121 Leaves oblong-lanceolate obtuse at base variegated and stained with red and yellow, Spikes axillary erect

21125 Stem erect-branched gouty at base, Leaves peltate-cordate 5-lobed glabrous Lobes subovate blunt, Stipules glandularly fringed, Cymes on long peduncles terminal, Teeth of calyx and lobes of corolla blunt



21126 Leaves palmately 5-lobed with wide recesses, Lobes spatulately oboovate acuminate hairy on the nerves beneath and petioles

21127 Leaves coriaceous obtuse lanceolate entire or 3-lobed glabrous, Lobes acuminate

21128 Leaves oval-oblong cordate at base downy as are the petioles and young branches, Flowers axillary panicled, Segments of calyx cohering at apex Carpels 4—5 downy 4—5-seeded, Seeds small red

21129 Leaves oblong acuminate entire smooth on long petioles, Flowers panicled axillary, Carpels 4—6 seeded, Seeds white large

21130 Leaves oblong acuminate entire smooth on long petioles, Flowers axillary panicled, Carpels 1—2-seeded, Seeds red large

and Miscellaneous Particulars

but it is probable that many of the species have the same kind of substance, as it seems nothing more than the concrete state of the mucilage

21129 *Sterculia macrocarpa* and *S. acuminata* The seeds are known in Africa by the names of White and Red Cola or Kola They have long been celebrated by travellers as possessing a high degree of value among the natives of Guinea, who take a portion of one of them before each meal for they enhance the flavour of anything they may subsequently eat or drink The seeds are extremely bitter

---

Order 9 DECANDRIA Stamens 10

3318, 2092*a* *Nuttallia* Calyx free, campanulate 5-cleft, of the female separating transversely above the base Petals 5, oblong-oval rather unguiculate. Stamens 10, in 2 series Anthers roundish —Female Stamens as in the male, but sterile Ovaria 5, free, 1-celled, obliquely obovate, glabrous, biovulate Style filiform, articulated at base deciduous Stigma dilated Carpels subdrupaceous, 2—3, sometimes solitary by abortion, 1-seeded, a little incurved

Order 12. POLYANDRIA Stamens numerous, inserted under the ovarium

3319 2106*a* *Boldoa* Male Perianth campanulate, 5-cleft, having 5 petaloid scales in the throat, alternating with its segments Stamens numerous, inserted in the throat of the calyx Filaments flattened, auricled on both sides above the base Anthers 2 celled —Female Perianth as in the male, but with the scales in the throat narrower, and abortive and gland-formed stamens Ovaria 2—9, conical, conniving, on short stipes, coloring at top. Style filiform, distinct Stigmas simple Drupes 2—9, 1-seeded, naked in consequence of the perianth being deciduous

3320 2106*b* *Tasmannia* Dioecious or polygamous —Male Stamens indefinite, a little curved Pistil rudimentary. —Female Sepals 2 Petals 2—5, deciduous Stigma adhering longitudinally to the inner side of the ovaria. Fruit a berry-like drupe, indehiscent, 1-celled, many-seeded

3321 2108*a* *Encephalártos* Male Anthers open, collected into a terminal pedunculate strobile, inserted all over the common rachis —Female Carpels numerous, collected into a terminal pedunculate strobile all over the common rachis Fruit syncarpous Single scales oblong-cuneate, thickened at apex, obtuse or acuminate

3322 2108*b* *Dion* Strobile ovate, dense, woolly, size of an infant's head, composed of densely woolly stalked scales which are cordate acuminate, smooth inside, with a solitary seed on each side at base Seed size of a Spanish chestnut

3323 2108*c* *Freycinetia* Dioecious or pseudo-polygamous —Male Spadix simple, covered with flowers Filaments filiform Anthers 2-celled, dehiscing lengthwise —Female Spadix simple, covered with pistils Ovaria combined by the sides, 1-celled Fruit baccate, many-seeded and many-celled from the carpels being combined. Seeds numerous, minute fusiform

Order 13 MONADELPHIA Stamens united into one body.

3324 2109*a* *Pleiocóleus* Flowers on an elongated spadix, disposed in simple or branched spikes, hidden by incomplete scale-formed distichly sessile imbricate spathes Male flowers twin · female solitary. Calyx trifid. Corolla 3-parted, valvate Stamens 6, subulate, monadelphous at base —Female calyx as in male Filaments without anthers, combined into a 6-cleft membranous cupula. Ovarium 3-celled Stigmas 3, nearly sessile, subulate Berry 1-celled, 1-seeded loricate from retrograde scales

3325 2109*b* *Lodoicea.* Male catkins cylindrical, closely imbricate from the coalition of the scales. Flowers bracteate, arranged in 2 rows in the pits of the rachis, aggregate. Calyx deeply 3-parted, or of 3 sepals. Stamens 24 in 6 monadelphous at base Anthers linear, truncate, rather 2-lobed at both ends —Female flowers solitary within the peculiar scales of the catkin. Calyx of 3 sepals Petals 3 Ovarium 2—4-celled. Stigmas 2—4, sessile, con-

niving Drupe fibry, 2-lobed, 2—4-seeded, but usually only 1 seeded Sarcocarp thick, fibry. Nuts or seeds bony adhering to the fibres of the sarcocarp.

3326 2114*a*. *Torrèya*. Male catkins at first globose, but at length elongated, the rachis ultimately becoming naked except at the base, where it is bracteate by quadrifariously imbricate scales. Staminiferous scales pedicellate rather peltate, each bearing a 4-celled anther.—Female catkin ovate, 1-flowered, bracteate at base as in the male. Seed ovate, bony, bractеate at base by the increased scales.

3327. 2114*b* *Cephalotáxus* Male catkins axillary, capitate, propped by bracts Stamens 4—6, or more, in each scale.—Female catkins from the axils of the shoots of the present year. Fruit 2—3 in each head, drupaceous, adnate to a closed fleshy urceolus.

3328. 2114*c*. *Dacrýdium*. Male catkin ovoid, girded by imbricating bracts at base. Stamens numerous, imbricate

History, Use, Propagation, Culture,

21141. *Gynéreum argénteum* is a noble grass, called Pampas grass in consequence of its inhabiting the vast plains of South America called Pampas. It rivals the Bamboo in height, exceeding several times that of a man. It appears to be hardy.

short, dilated into an ovate-lanceolate connective. Anthers 2-celled. Cells adnate to the connective — Female flowers solitary, sessile on a cup-shaped fleshy disk Ovarium solitary, sessile at the bottom of the disk, open at top.

21129 2116*a*. *Sphæróstémma* Calyx bibracteate, of 3 sepals Petals 6, ternary. Stamens numerous, seated on a globose receptacle, monadelphous — Female Ovaria numerous, seated on a conical receptacle, which is at length elongated Berries 2-seeded.

2130. 2116*b* *Lardizabàla*. Sepals and petals ternary, in 2 or 3 series —Male. Stamens 6, monadelphous —Female. Berries 3—6 celled Cells many-seeded Pulp of fruit sweet and edible.

2131 2116*c* *Phytocrène*. Flowers collected on a globose fleshy receptacle.—Male. Scale urceolate, 4-lobed, bearing a 4-parted perianth Stamens 4, monadelphous. Anthers versatile Rudiment of pistil pilose, pedicellate between the filaments, and beset with purple hairs.—Female flowers unknown.

MONANDRIA.

21131 Trunk spiny, Leaves very long glaucous smooth, Male spadix spicate with distinct bracts
21132 Diffuse, Leaves ensiform channeled unarmed shining
21133 Heads solitary pedunculate Nuts 1-seeded pyramidal at top, Tree pyramidal, Lvs a foot long 9—10 lines broad
21134 Heads solitary conical drooping, Nuts 1-seeded flat at top armed with spines, Top of tree conical, Lvs oblong
21135 Partial racemes or thyrse male simple, Ovaria distinct, Drupes spirosely cuspidate, Nuts 1-celled dense short
21136 Drupes of compound fruit oblong cuneated crowned by smooth acuminated incurved forked spines, Nuts 1-celled Leaves broad-lanceolate having the keel and margins serrulated
21137 Heads oblong racemose erect, Nuts 1-seeded flat at top Pulp sweet and edible
21138 Heads racemose erect, Nuts 1-seeded pyramidal at top Leaves 6 inches long and 6—9 lines broad
21139 Caudex stolonifer, Bundles of drupes 8—12-celled depressed and tessellated at top and rather angular at base
21140 Diffuse, Leaves linear 3-nerved broad at top spinosely serrated, Trunk and branches emitting roots

DIANDRIA

21141 Tall tufted, Leaves spiny serrulated, Panicle much branched, Spikelets pedicellate

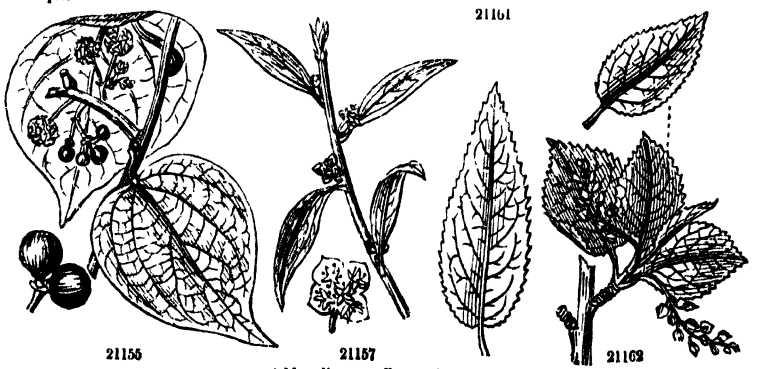
TRIANDRIA

21142 Pinnæ solitary ensiform flaccid bifarious, Embryo at base of seed, Spadix branched
21143 Pinnæ disposed in nearly opposite fascicles ensiform terminated by a spine

TETRANDRIA.

21144 Leaves oval laurel-like downy under side, a handsomer plant than *G. elliptica*

PENTANDRIA.



21145 Armed with small incurved prickles, Leaves abruptly or impari-pinnate with 5—6 pairs of unequal ovate-lanceolate entire acuminate smooth leaflets, Panicles terminal crowded

21146 Branches erect white from tomentum, Lvs alter petiol. lanc acute coriac usually glab. and shining above and white from tom. ben, Flws small panicled, Panicles short axil and term. white from pili, Fruit pea-formed

HEXANDRIA.

21147 Fronds forked, Segments scimitar-shaped serrated outside, Spadix branched, Male branches erect, Berries elliptic

History, Use, Propagation, Culture,

21151 *Mauritia vinífera*. The berries are ovate, the size of a hen's egg, and of a chestnut colour, and are called Buriti or Bruti, by the natives of Brazil These berries are used for many purposes The caudex yields a large quantity of palm wine when wounded, which is of a sweetish acid taste, not unlike ginger beer

21156. *Hélmia racemòsa* is nearly related to *Dioscòrea*, or Yam The flowers are small, yellow and purple The root is tuberous and fleshy The plant requires the same treatment as *Dioscòrea*

21155. *Coscínium fenestràtum* is in repute among the inhabitants of Colomba, in Ceylon, who slice the wood which is yellow and bitter, in thin pieces, and swallow them with the liquid, after steeping them in water several hours They commend it as an excellent stomachic. It is the Colomba wood of commerce.

21148 **Caudex ringed, Sheath short auricled at top, Pinnæ neat lanceolate, Spadix loose angular, of the female doubly branched, Female corollas tridentate, Drupes subglobose**

21149 **Stolonif., Caudex covered with sheaths of fronds, Petis short nearly terete, Lvs pin., Pinnæ flat lanc. subfalc. taper-pntd at both ends, Spadix under the fronds simply brnchd, Berries glob size of a pea blackish green**

21150 **Caudex flexuous spinose, Fronds pinnately fan-shaped, Pinnæ linear glaucescent beneath, Petioles terete, Spadix glabrous, Fruit ovate, Scales of fruit broader than long, Spadix 2 feet**

21151 **Caudex tall erect unarmed, Fronds pinnately fan-shaped same colour on both sides, Petioles semi-terete channeled, Scales of fruit ovate rhomboid, Spadix 6—10 feet**

21152 **Stem prickly, Leaves ovate cordate smooth 3-nerved, Berries acuminate**

21153 **Leaves sagittate**

21154 **Very like the Cape species and perhaps only the same plant cultivated in Mexico**

21155 **Leaves cordate entire 5—7-nerved shining above hoary beneath, Peduncles umbellulate, Berries villous**

21156 **Twining glabrous fleshy, Root tuberous, Leaves scattered cordate-ovate acuminate 9-nerved glandular at base, Male raceme axillary solitary**

21157 **Leaves alternate nerved, Flowers in axillary fascicles imbricated by dense scales**

OCTANDRIA.

21158 **Leaves loose drooping coriaceous ovate rather concave wavy generally cordate acuminate coarsely crenated on** [long loose weak petioles, Stipules acute spreading

21159 **Leaves flat erect oblong-lanceolate obtuse glandularly crenated paler beneath on short petioles, Stipules acute** [spreading

21160 **Leaves spreading flat ovate or roundish ovate shortly acuminate closely and slightly glandularly crenated paler beneath on long petioles, Stipules apparently adpressed**

21161 **Leaves flat oblong or lanceolate oblong rounded or cordate at base acuminate glandularly crenated paler beneath on longish petioles, Stipules erect mucronate**

21162 **Leaves spreading variable in form oblong-roundish rhomboid-oval or ovate-elliptic cordate at base closely and minutely glandularly crenated whitish beneath on short petioles, Stipules obtuse adpressed**

ENNEANDRIA

21163 **Leaves 3 in a whorl obtuse serrulated, Male flowers unknown, Female flower with a long tubular bifid spathe many times longer than the sessile ovarium, Sepals and petals broad nearly equal, Stigmas reflexed**

21164 **Leaves cuneate obovate obtuse smooth**

21165 **Segments of perianth petaloid ovate lanceolate, Leaves oblong marginate glabrous above and hoary tomentose beneath, Umbels axillary aggregate on short peduncles, Involucrum 5-leaved 5—6-flwd, Calyx 5-cleft**

DECANDRIA.

21166 **Leaves ovate-lanceolate acute opposite about 5-nerved nearly sessile, Racemes fascicled axillary, Flowers hermaphrodite**

21167 **Arboreous, Lvs rising with flowers from same buds alternate cuneate oblong apiculate entire downy or glab narrowed into the short petioles, Racs pend, Bracts membacum, Flws white with odour of bitter almonds**

21168 21170 21178 21175

and Miscellaneous Particulars

3315 *Tutsa'a* A plant of easy culture, only requiring the treatment of other stove shrubs

21163 *Anácharis alsinástrum* is a plant in habit much like some species of *Potamogèton*, and has been recently discovered as a native of Britain, but may have been introduced from North America, as the female plant has only been found. It grows so fast when introduced into canals, ponds, or rivers, that it soon chokes them up, and for this reason is a great pest wherever it grows.

3317 *Tetranthèra* Cultivated and treated like any ordinary hothouse plant.

21167 *Nuttallia cerasiformis* is a hardy shrub, with much the habit of a species of *Spiræ'a*, or *Cerasus*, or Bird-cherry

History, Use, Propagation, Culture,

3319 *Boldòa* The plant is valued in Chili on account of its wood, which forms a valuable charcoal, and the aromatic fruit is eaten.

3320 *Tasmánnia* is a genus of smooth shrubs, having the flowers crowded in the axils of the upper leaves, and readily increased by cuttings

21180 *Plectocòmia elongàta* is a climbing palm, extending to the length of 500 feet, with pinnate leaves and lateral spadixes, which are divided into elongated branches. The spathes are coriaceous, and loosely imbricate The fruit is chestnut-coloured.

3321 *Encephalártos* is a genus separated from *Zàmia*, and requires the same treatment as the species of that genus They are principally natives of the Cape of Good Hope. The New Holland species of *Zàmia* are now called *Macrozàmia*. There is another genus, *Dipsacozàmia mexicàna* of Bentham, which does not appear to differ from *Zamia*

21176, *Dion edùle* The seeds of this plant are said to be a source of arrow-root in Mexico. This is probably only a species of *Macrozàmia*

3323 *Freycinetia* is a genus of trees having stems often radicant or scandent. The leaves are imbricate and narrow, sheathing and stem-clasping at the base, having the margins and back spinulose The floral leaves are bract formed and coloured The spadix is terminal, sometimes disposed in spikes, and sometimes in fascicles, cylindrical or oval-oblong

3325. *Lodoicea*. According to Mr. Clark the *Lodoicea* is completely extirpated in Round Island, and exists at present, in a state of nature, only on the islands of Praslin and Curieuse. The few which are found in the islands of the Seychelles Archipelago have all been planted, and only two or three of these appear to thrive The native place of growth of the *Lodoicea* was not discovered until 1743, the nuts were solely known from having been found floating on the ocean It was highly prized, and the value of one was estimated at from 60 to 100 crowns It was considered to possess great medicinal virtues, and many fabulous accounts have been given of it The trees which produced the nut were supposed to form a forest at the bottom of the sea. Water kept in the shell was considered to preserve those who drank of it from every complaint The crown or texture of the top of the tree is said to be used like that of the cabbage palm, *Arèca oleràcea*, but is less delicate, and slightly bitter, and is often preserved in vinegar. Out of the

and Miscellaneous Particulars

[illegible] vessels of different forms and uses are made The leaves are employed to thatch houses The young [illegible] affords an excellent material for hats. The trunk is split and used for palisades for surrounding houses and gardens

Lodoicea seychellarum is the Sea or Double Cocoa-nut of the Seychelles or Praslin, and is a beautiful palm tree, growing to the height of 60 to 80, or even to 100 feet, the trunk is annulated from the scars of the fallen leaves, about a foot in diameter, and is equal in thickness from top to bottom. The trunk yields to the slightest breeze, and when the wind is moderately strong the huge leaves are crashed together with an astonishing noise The part of the trunk immediately above the surface of the ground forms an inverted cone, which is terminated below by a hemispherical base whence spread in all directions a great number of cord-like roots, penetrating to a considerable distance around. These roots remain long after the destruction of the plant itself. So firmly are the leaves attached to the trunk, that a man may seat himself at the end of one of them with perfect safety The texture of the leaflets is very strong, and consists of fine threads or fibres, disposed in three layers, the direction of the two outer layers is longitudinal, and that of the central layer transverse. Mr Clark estimates that three of the leaves, only one of which is produced each year, occupy 8 inches on the stem, and that consequently a tree of 80 feet in height must be about 400 years old According to the same authority, the male and female spadix, instead of rising from the angle of the accompanying leaf-stalk passes through a fissure at its base he also states that, although the tree puts forth only one spadix in a year ten or more may be seen flowering at the same time, this is to be explained by the multiplicity of flowers in the [illegible]kin, which blossom successively. The female trees bear flowers and fruit in all their different states at the same time As many as seven well-formed drupes are sometimes produced on a single spadix, and 7 or 8 years are required for the full maturing of the nut This fact Mr Clark states to have been ascertained on one of the female Lodoiceas planted at Mahé, which had flowered for several years without producing fruit, owing to the absence of the male plant A male flower was procured from an estate a few miles distant, and suspended in the tree, and about two months afterwards one of the buds expanded, and finally arrived at maturity. The experiment was made in 1833, and the fruit fell at the latter end of 1841. The drupe attains the length of 15 inches, is about 3 feet in circumference, and weighs from 30 to 40 pounds. When the fruit has reached its full size but is still soft (in which state it is called

History, Use, Propagation, Culture,

coco-tendre), it may easily be cut through with a knife. A transverse section, Mr Clark states, successively dis[illegible] the husk, green on the outside, but whitish within, of a harsh astringent taste, much like the husk of a [illegible] cocoa-nut, inside of which is a substance which is destined to form the shell, next follows a layer, more or less th[illegible] of a mealy insipid substance, of a white colour, covering a yellow substance of a very decided bitter, and sam[illegible] poisonous, which encloses the perisperm. This is a white translucent mass of a gelatinous consistence, and sw[illegible] taste; taken at the proper period it furnishes an agreeable food, much esteemed by the Seychellois. In the cen[illegible] this, where the two lobes of the perisperm unite, is the germ, at this period scarcely visible. The germination of [illegible] seed sometimes commences before the fall of the fruit, but most frequently after. It is prevented by burying [illegible] nut, but readily takes place on the surface of the earth, in a situation not too much exposed to the sun. The le[illegible] of time from the germination to the period when the trunk begins to form above the ground, is stated at from [illegible] 20 years, and even in favourable situations the *Lodoicea* is full 25 years before producing flowers.

21182. *Araucària Cookii* is more dense in habit than *A excélsa*, the Norfolk Island pine. The scales of the c[illegible] do not terminate in a hard woody truncate extremity, as in that species, but in a long reflexed appendage. In th[illegible] of Aniteura, where it was first discovered, the tree has become scarce, the English having cut down the trees [illegible] spars. Mr Moore, the colonial botanist in New South Wales, saw only one plant there, and this was [illegible] rendered sacred by the natives, but in New Caledonia, on the south-east coast, whole forests of this tree are [illegible] observed. In such situations the tops are not unlike basaltic columns. Mr Moore mentions the first plant of it [illegible] by Captain Cook, who describes it in his account of New Caledonia as an elevation like a tower. It still stands [illegible] in a flourishing condition. Its appearance now is like a well proportioned factory chimney of great height [illegible] *willii* is a fine species, and grows also to a large tree. It is called *Banza-Tunza* or *Banya-Tunya*.

21192. *Torrèya taxifòlia*. This tree has a strong and peculiar odour when burnt or bruised, and hence it is [illegible] Stinking Cedar in its native country. The wood is not liable to the attacks of insects. *T. Humboldtii* is a tree [illegible] much paler green colour than *T. taxifolia*

Adult leaves closely imbricate incurved convex obtuse keeled on the back, Female aments ovate-elliptic, Scale 2-seeded terminated by a long reflexed mucrone

Branchlets opposite, Leaves flat ovate-lanceolate pungent, young ones subsecund, adult ones spreading on all sides, Scales of strobile with a hooked reflexed point

Leaves tern spreading acute 3 times shorter than fruit, Nut 3-celled

Arboreous, Leaves all scale-formed in 4 ranks obtuse marked by a circular hollow on the back, Branches slender tetragonal Fruit spherical glaucous on short stalks

Leaves tern spreading mucronate keeled 1-nerved, Berry elliptic longer than leaf A handsome shrub covered with violet bloom [bilicate, Branches and branchlets crowded terete, Stem prostrate

Leaves tern acute speedily imbricate ovate-oblong acute or acuminate persistent young ones inflexed, Berries ovate umbilicate

Leaves linear-lanceolate loosely imbricate smooth convex beneath, Berries reddish-oval tubercled, Branches and branchlets recurved

Branches flattened, Leaves in 4 rows closely imbricate rather thick obtuse ovate, Berries globular small

Branches pendent, Leaves ovate lanceolate in 4 rows, Berries globular with projecting pointed scales

Leaves in 3 rows often only opposite ovate acuminate, on the young shoots they are only half-line long

Leaves distich stiff mucronate exstipulate, Branches distich and forked

This species is in the Gardens, but is not yet described, but it appears very distinct

[on short bracteate peduncs, Amentules or scales shorter than the broad-ovate erose bracts

Leaves of branchs distich sessile pectinately disposed linear acum 3—4 inches long stiff paler beneath, Male aments globose.

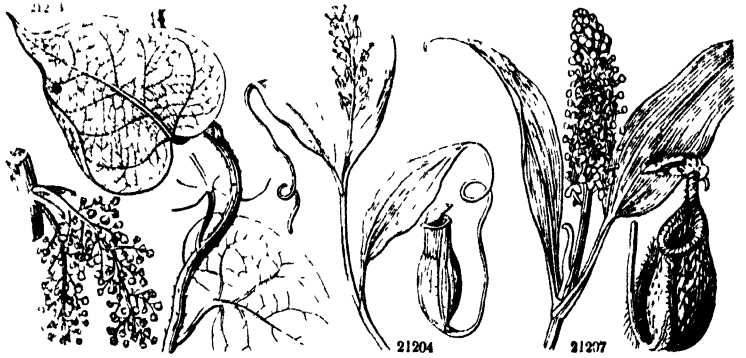
Leaves distich flat 1½ inch long green above and glaucous beneath except on the midrib and revolute edges where they are green mucronate on short foot-stalks

Leaves linear-subulate tetragonal mutic green with elevated angles, when young divaricate but loosely imbricate in the adult state, Branches flexuous dependent

Arboreous, Leaves crowded without order erectly spreading mucronate A large timber tree of slow growth

Branches tetragonal, Leaves small opposite adpressed ovate-acuminate keeled Female aments terminal curved drooping 5—7 flowered, Fruit loosely spicate, Male scales small, Fructiferous scales concave cleft in front, seed small erect elliptic subdrupaceous

Leaves loosely imbricate subulate compressedly tetragonal mucronate glaucous with depressed angles [branches stiff, younger ones twiggy



Ivs turned linear obtuse with a callous point and revolute margins green above and glaucous beneath, Adult

Leaves twice or thrice ternate often simple, Leaflets oblong acute unequal at base and with one or two teeth on one side, Bracts 2 large unequally cordate at base of peduncles

Twining Leaves ovate lanceolate entire, Flowers in fascicles, Peduncles bracteate hardly equalling the petioles in length, Anthers sessile immersed, Berries 2-seeded, Spike a tuberculated receptacle

[naked

Leaves broad cordate a little lobed at base villous beneath, Racemes crowded at the base of the branches

21204 21207

and Miscellaneous Particulars

Cephalotáxus Fortúnii is said by Mr Fortune to grow to the height of 40 to 60 feet. The leaves are set in alternate, opposite, close together, 3 or 4 inches long, acuminate, 1-nerved. It increases by cuttings, like Yew.

Dacrydium cupréssinum is a red pine which attains the greatest perfection in moist rich soil The tree rises to the height of 80 feet, and the trunk is 4 feet in diameter. The foliage is said to be graceful. Captain Cook prepared a kind of spruce-beer out of the bitter resinous juice, which he found excellent in scorbutic complaints The wood is close-grained, and much resembles the Bermuda Cedar. It is the New Spruce Tree of New Zealand, described in Cook's "Second Voyage," vol i p. 70, t. 51. *D excélsum* grows to a very large tree, and is called Rimu Kaica by the New Zealanders. *D Franklínii* is the Huon Pine of Van Diemen's Land. It is a noble timber tree growing in swampy places, is of a pyramidal form with rather drooping branches, the ultimate ones are very slender The wood burns briskly, giving out a pleasant aromatic odour. It is close-grained and valuable for ship-building and for all purposes to which pine wood is applied; and is readily obtained in logs 40 or 50 feet long. The Huon Pine forms the principal article of exportation from Macquarie Harbour. 2869 logs were collected, in one year, from different spots near the neighbourhood

Lardizabàla bitérnata is a hardy evergreen creeper, well adapted for covering high walls, the foliage being always green The flowers are of a deep purplish chocolate colour. The fruit is sweet and edible, and is sold in the Chilian markets under the name of *Aquilboquil*, of *Guilbogus* in Peru, and of *Coguill-Vochi* in Chili

Sphærostémma propinquum is a climbing shrub requiring protection in winter, but it is otherwise of easy culture.

Phytocrene gigantèa is a large twining shrub, with soft porous wood, from which issues a quantity of limpid watery juice in great quantities on being cut. The leaves are large, cordate, and petiolate. This plant should be cultivated and treated like other stove climbing shrubs.

History, Use, Propagation, Culture,

3332. *Nepthùia* is a genus of floating water-plants, with leaves sensitive to the touch, like those of the sensitive plant. They grow well in a stove aquarium, or in tubs or pans filled with water, having a few inches of mould in the bottom. They require to be placed in a warm situation in a hothouse.

21304 Leaves petiolate oblong, Pitchers naked somewhat ventricose at base thickish marcescent above depressed and striated at the mouth, Racemes very long, Pedicels 1-flowered
21305 In the Gardens, but not yet described, not having flowered

21306 Stem creeping at base with uliniferous surculi but at length folliferous and erect, Tendrils of leaves mutic, Pitchers petiolate winged in front coarctate at the mouth roundish and striated having the lid lanceolate reflexed and tricuspidate behind, Plant covered with rusty down
21307 Leaves petiolate, lower ones bearing ventricosely campanulate pitchers which bear broad membranous wings in front Wings ciliated, those of the upper leaves funnel-shaped and naked, all beautifully striped
21308 In the Gardens, but not yet described
21309 In the Gardens, but not yet described
21310 In the Gardens, but not yet described
21311 Dwarf, Pitchers deep reddish brown outside and marked with the same colour inside

---

Order 2. DIŒCIA. Flowers dioecious.

2135 2153a *Phytélephas.* Flowers polygamous, dioecious Spathe 1 leaved Spadix simple clavate, densely beset with flowers Calyx urceolate obsoletely many toothed Stamens numerous. Styles 5—6-cleft. Drupes aggregate, connate 4 celled Cells 1-seeded Albumen horny

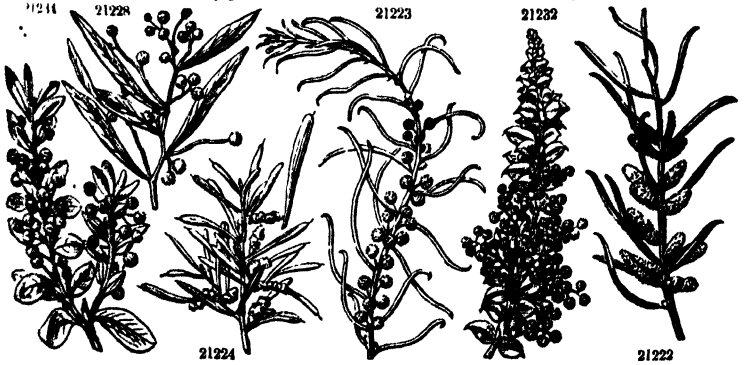
2149 2150a *Mimusa* Flowers polygamous Calyx 4-cleft, persistent Petals 4 unguiculate, deciduous —Male Stamens 4, hypogynous, alternating with the petals Disk fleshy, 4 lobed, girding the short apiculated rudiment of an ovarium —Female flowers with rudiments of stamens on an annular disk, which girds the ovarium. Ovarium free, 4 celled Ovula solitary in the cells, pendulous Style cylindrical, simple. Stigma thick, 4-lobed. Drupe fleshy

2157 2157a *Antiaris* Flowers monoecious —Male Involucrum many-leaved, many-flowered Leaves in many series imbricate, connate at base, girding the orbicular flat convex receptacle, which is concave below Flowers sessile, crowded Perigone 3—4-leaved. Leaves spatulate, conniving at top Stamens 3—4, opposite the leaves Filaments short or wanting Anthers extrorse, 2 celled —Female flowers Involucrum 1-flowered, urceolate, multifid at top. Perigone wanting Ovarium 1-celled combined with the involucrum, containing only one pendulous ovulum. Style terminal, bifid, the legs filiform and stigmatose inside Drupe formed of the baccate involucrum.

MONŒCIA.

21212 Branches slender spreading villous when young Leaves with 4—5 pairs of pinnæ, each pinna bearing from 20—26 pairs of small lin. obt closely imbricate adpressedly ciliated leaflets, Heads solitary pedunculate pendulous

21213 Fibrous, Prickles scattered straight, Stipules broad ovate acute, Leaves of 2—3 pairs of pinnæ, each pinna bearing 8—12 pairs of obl.-lin leaflets, Pedunes rather longer than lvs, Bracts small, Legume lin.-fal. scab

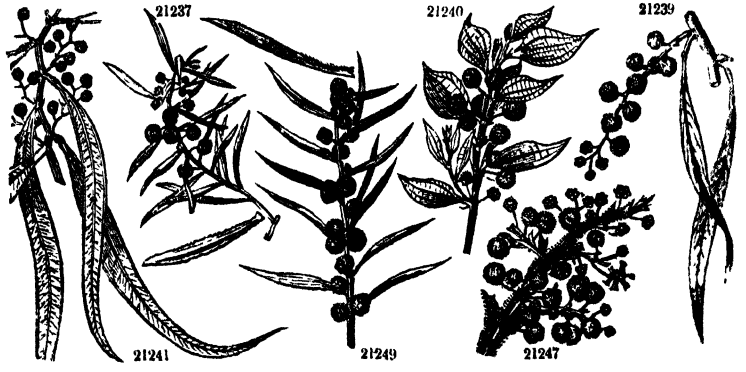


21214 Stems prostrate compressed, Leaves with 2—4 pairs of pinnæ, and each pinna bearing 12 pairs of leaflets, Peduncles bracteate

[leaflets

21215 Prickles scattered, Leaves with 1—2 pairs of pinnæ, and each pinna bearing 7—10 pairs of oblong-linear obtuse
21216 Stipules stipular or wanting, Leaves with 1—2 pairs of pinnæ, each pinna bearing 18—25 pairs of ciliated leaflets, Petiole bearing 1—2 small glands
21217 Stipules stipular straight small, Leaves with 1—2 pairs of pinnæ, each pinna bearing 18—20 pairs of linear lfts, Gland small on the petiole between the pairs of pinnæ, Spikes cylindrical sessile

[flexedly divaricate



21218 Phyllodia lanceolate-linear ending in a sharp point verticillate, Spikes axillary cylindrical, Branches stiff de-
21219 Stipules spiny, Phyllodia scattered or verticillate linear-lanceolate 3-nerved ending in a sharp point glabrous glandless, Spikes axillary solitary elongated, Flowers 4-cleft
21220 Branches angular, Phyllodia very long linear hard striated narrow at base retrorsely hooked at apex glandulose above the base, Stipules wanting, Spikes ament-formed twin shorter than phyllodia
21221 Phyllodia linear in clusters deep green mucronate glandless, Spikes solitary axillary loose

and Miscellaneous Particulars.

2213 *Prosopis* is a genus of large trees, which require the same treatment and culture as the stove species of *Mimosa* or *Acacia*. The pulp in the pods has a sweetish taste, not unlike gingerbread, or the Spanish Algaroba, or St. John's bread (*Ceratonia Siliqua*), and is eaten by the inhabitants where the trees grow.

Glab. or resinose, puberulous Branches angular, Phyllodia long lin.-subu. flat recurved mucr. 3-nerved with an obscure gland near the base, Spikes usually twin dense on short peduncs cylind. Sepals free spatulate

Glabrous but when young downy, Phyllodia subulate teretely compressed many-nerved mutic or uncinately mucronate Peduncles short solitary or twin Sepals free narrow-spatulate

Phyllodia lin.-spatul. 1—3-nerved rounded and mucronate at apex, Spikes solit. or hairy, Calyx usually 5-lbd

Phyllodia lanceolate-linear falcate striated tapering at base, Spikes cylindrical axillary twin nearly sessile

Phyllodia long lanceolate bluntish 3-nerved and reticulate tapering at base with an obscure gland on the upper margin at base, Spikes twin, Flowers 4-cleft

Phyllodia oblong-lanceolate obliquely cuneate at base 3-nerved terminating in a mucrone with one gland on the upper margin, Spikes axillary usually twin

Phyllodia oblong acuminate at both ends 1-nerved and feather-veined with one gland in front at base, Heads of flowers racemose

Stipules caducous Phyllodia ovate-oblong oblique marginate falcate mucronate downy as are the branches, Heads solitary axillary

Powdery Phyllodia elliptic-obtuse wavy 1-nerved terminated by an oblique mucrone, Heads of flwrs racemose

Glabrous, glaucous when young, Branches tr quetrous Phyllodia obliquely ovate or obovate mucronate coriaceous tapering at base marginate with a gland beneath the middle Heads racemose on short peduncles

Branches angular Phyllodia cultriform ending in a hooked mucrone which leans to one side and furnished with a gland in the middle on the upper margin 1-nerved Heads racemose

Branches angular Phyllodia long linear-lanceolate falcate acute feather nerved glandless tapering at base, Racemes at first leafy Heads numerous globose, Legume long linear terete

Branches angular, Phyllodia obovate-oblong obtuse feather-nerved silky with one gland towards the middle, Heads many-flowered solitary or racemose, Petals clavate elevated as is the calyx

Branches angular, Phyllodia elliptic ending in a spine-like mucrone 1-nerved and feather-nerved glaucous with a gland on one side Heads racemose

Glabrous Phyllodia ovate acute bearing a gland on the upper margin, Heads axillary twice the length of the phyllodia

Erect Branches slender, Phyllodia linear clammy as are the branches, Heads globular on short stalks axillary solitary or twin

Much branched glabrous or minutely downy viscid, Phyllodia narrow oblong-lanceolate subfalcate obtuse obliquely mucr. or glandulif. at apex many-nrvd, Pedunc. downy shortly rac. or solit., Heads about 6-flwd

Arcuous Branches drooping, Phyllodia lanceolate often 1 foot long glaucous green almost blue, Racemes axillary, Heads globose

Glabrous or hispid Branches angular Stipules setaceous-spinescent, Phyllodia petiolate ovate-lanceolate oblique subulately acuminated wavy, Upper margin often crenated 2-nerved or forked and 2—3-nerved transversely veiny or reticulate with large gland near base Pedunc. simple or shortly rac., Heads few flwd glab

Phyllodia green curved 8—9 inches long marginate 1-nerved and feather veined, Heads racemose, Bracts short

Branches and phyllodia straight recurved at top glandless acute terete glabrous, Stipules none Heads twin or tern pedunculate rising from deciduous imbricate bracts

Greyish Branches weeping or pendulous, Phyllodia linear-lanceolate arched a little tapering to both ends terminated by a hooked mucrone with one gland in front at base and 2—3 longitudinal nerves, Heads racem.

Stipules acicular twin spinescent Phyllodia dolabriform smooth terminated by a spine like mucrone many-nerved convex on the upper side and nearly straight on the lower, Branches slightly angular downy, Heads of flowers solitary pedunculate Peduncles longer than phyllodia

Stipules spinescent, Phyllodia obliquely oblong-lanceolate 1-nerved rather pilose ending in a hooked mucrone with a gland-bearing tooth on the upper margin Branches hairy Heads of flowers solitary or twin

Stipules spinescent, Phyllodia obliquely oblong-lanceolate entire wavy 1-nerved, Branches clammy glabrous, Heads solitary [cronate with one glandular tooth on the upper margin Heads solit. on short peduncs

Hairy, Branches broadly winged, Stips small pungent, Phyllodia short bifarious decurrent obliquely truncate mucronate with one glandular tooth on the upper margin Heads solit. on short peduncs

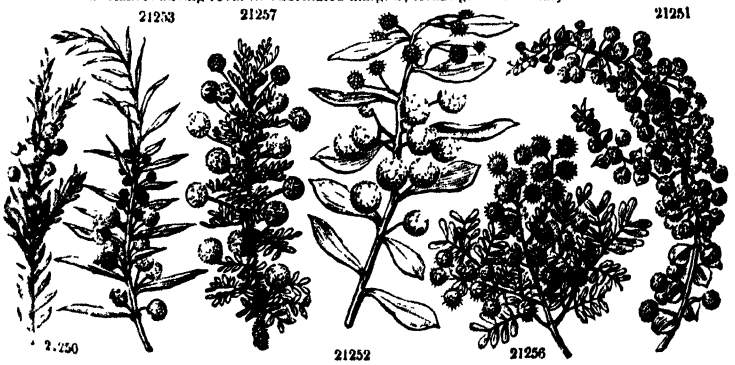
Stipules wanting, Phyllodia linear-lanceolate rather falcate tapering at base 1-nerved terminated by an incurved callous mucrone clammy as are the branchlets, Heads of flowers twin

Villous Phyllodia lanceolate acute stiff nerved falcate ending in a pungent mucrone, Heads twin

Hairy Stipules deciduous, Phyllodia linear ending in an oblique callous mucrone 1-nerved glandless, Heads of flowers twin on long peduncles

Branches angular puberulous, Stipules scale-formed very minute, Phyllodia on short petioles obliquely rounded obtuse or retuse mucr. with one gland towards middle on upper margin, Heads glob. solit. on long peduncs.

Silky from minute down, Branches rather angular, Phyllodia obovate or oblong rather oblique very blunt marginate glandless or with one obscure gland 1-nerved feather veined, Heads solitary or few shortly racemose many-flowered



Stipules almost wanting, Phyllodia linear-lanceolate many-nerved rather pilose mucronate, Heads solitary

Stipules almost wanting, Phyllodia oblong-lanceolate obtuse obliquely mucronate tapering at base 3—7-nerved with one gland on the upper margin, Heads solitary

Stipules almost wanting, Phyllodia lanceolate tapering to both ends shining 2-nerved with a gland on upper margin at base clammy as are the branches, Heads of flowers usually twin

Glaucescent glabrous or branches and petioles hairy, Leaves with 2—3 pairs of pinnæ with a depressed bracteate gland on the petiole beneath the pairs of pinnæ, Leaflets 4—8 pairs on each pinna obovate-oblong obtuse obscurely 2—3-nerved, Heads in racemes, upper ones panicled

Branches hairy, Spines axillary subulate often wanting, Leaves with one pair of pinnæ, each pinna bearing 3—7 pairs of linear leaflets having revolute subciliated margins, Heads globose solitary

History, Use, Propagation, Culture,

3334. ***Stenánthium frígidum*** is said to be poisonous, and may be supposed to furnish a part of the venomo
dilla seeds of commerce from which veratra is obtained.

3335 ***Phytélephas*** is the genus the nuts of which are the vegetable ivory, now imported to this countr
quantities, so much used by the turners for toys, knobs of umbrellas and walking-sticks, buttons, &c
Cabeno de Negro in Peru, where the leaves are used for thatch for houses. The young fruit is devoured
The plant has been cultivated by Messrs Loddiges of Hackney since 1820, and therefore is an old inhabitant
hot-houses. Whether the plant found on the banks of the Magdalena is the same as the plant from Peru is
This has also been introduced to Kew Gardens by Mr Purdie, formerly a collector for that establishment
stance of the nuts is the hardened perisperm.

3336. ***Skimmia japónica*** is a tree generally cultivated in Japan in gardens and around temples
Japanese, is said to mean a hurtful fruit.

21280. ***Antiáris toxicária*** is the Upas tree of Java and Jpu of Macassar, and is a large lactescent tree with
stipulate unequal-sided subcordate costately veined entire leaves, and axillary or lateral drooping peduncles
of the older travellers who have visited the islands of the Indian Archipelago make mention of this tree
the kingdom of Macassar on the Island of Celebes, and producing a poisonous juice of the most deadly
substance of these several statements is, that the natives of Macassar make use of the juice to poison

21256 Branches hairy Leaves of one pair of pinnæ, each pinna bearing 8—10 pairs of linear-lanceolate leaflets, Peduncles solitary or twin axillary 1-headed Heads globular

21259 Branches downy and hispid, Spines axillary subulate, Leaves of one pair of pinnæ on a short petiole bearing a pedicellate gland between the pairs of pinnæ, Leaflets 5—7 pairs on each pinna linear glabrous or ciliated on the margins Heads globose

21262 Stem hairy unarmed, Leaves with 2 pairs of pinnæ each pinna bearing 2—3 pairs of linear obtuse leaflets, Petioles marginate glandless, Peduncles longer than leaves, Spikes axillary drooping simple

21261 Stem simple leafy, Leaves linear complicate, Flowers large pedicellate racemose hermaphrodite

21263 Stem erect, Leaves usually opposite nearly all hastately triangular with spreading lobes, Perigone ovate-triangular muricate on back scarcely longer than fruit united only at base, Fruit panicled in dense spikes, Seeds black polished and a few dark brown and larger than the others

21264 Stem erect, Leaves oblong-lanceolate irregularly toothed rarely entire, Perigone obcordately triangular obtuse toothed to the keeled on the back closed

21264 Leaves alternate obovate entire glabrous glandless as are the petioles

21265 Leaves oblong-lanceolate entire coriaceous smooth rounded at base rather glaucous beneath, Racemes compound Fruit hairy in disk, Wings short parallel smooth

21266 Leaves oblong acuminate serrulated shining smooth, Corymbs terminal, Petals cuneated, Wings of fruit diverging cultriform

21267 Leaves truncate at base smooth and glaucous beneath palmately 5-lobed, Lobes deeply toothed Flowers apetalous pentandrous conglomerate on short pedicels, Ovaria downy [9 hairy, Ovaria hairy

21268 Leaves digitately 5-lobed, Lobes rather 3-lobed repandly toothed downy beneath, Racemes compound erect Filaments

21269 Leaves cordate 5-lobed downy beneath short, smooth in the adult state, Lobes ovate acuminate doubly serrated, Serratures awned, Racemes smooth, Wings of fruit diverging

21270 Leaves 9—10 parted, Lobes oblong acuminate deeply serrated or pinnatifid, Umbels 4—6-flowered

21271 Leaves smooth palmately divided into 5-7 lobes beyond the middle, Lobes oblong acuminate serrated, Umbels 5-7 flowered

21272 Leaves orbicular rather cordate at base 7-lobed smooth, Lobes acutely toothed hairy at the origin of the nerves beneath

21273 Leaves cordate 5-lobed villous beneath as are the petioles, Lobes ovate acute Racemes lateral, Petals bearded at apex Fruit villous with cultriform crenulated wings

21274 Leaves glabrous glaucous beneath and bearded in the axils of the veins suborbicularly cordate 5 cleft, Lobes obovate cut or toothed acutish, Corymbs nearly sessile nutant in the fruit-bearing state, Pedicels glabrous, Samara glabrous roundish with obovate erect conniving wings

DIŒCIA

21275 Fronds very long pinnate, Caudex humble, Heads of fruit large

21276 Fronds very long pinnate, Caudex none, Heads of fruit small

[Spadix paniculately branched, Berries globose blue furrowed on one side

21277 Frond digitately many parted, Petioles unarmed or denticulated Segments linear bluntish bidentate or bifid,

21278 Frond multifid, Segments bifid at top, Petioles toothed and covered with white scurf above, Partial spathes many Berries ovate nearly solitary lepidioted furrowed on one side

21279 Leaves alternate crowded towards the tops of the branches petiolate oblong coriaceous entire full of pellucid dots green above and pale beneath, Flowers terminal dichotomously panicled

21280 Segments of male involucrum ovate length of perianth, Leaves oblong-elliptic cordate at base, Heads hemispherical pendulous

and Miscellaneous Particulars

which are discharged through a tube, so fatal in its effects that a slight wound even in the heel, just sufficient to draw blood, not only produces immediate death but renders the flesh, within half an hour, so putrid as to separate from the bones on the mere application of the hands. "This," adds Bontius, "is no idle invention, but depends on the ocular testimony, not only of our own countrymen (the Dutch), but also on the English and French." Tavernier states the upas tree to be the produce of a certain tree growing on the island of Borneo, and capable of being so tempered as to prolong the suffering of the victim. Deschamps describes the tree as having much the habit of an elm having both male and female flowers growing on the same tree, and that the mere atmosphere of the tree is far less pernicious as it has been represented, he himself having cut branches from it with impunity The reports related concerning it, he thinks, may be explained by transferring the odium to the marshy and unwholesome air of the low island on the southern coast, to which, he says, state criminals and especially those of the highest rank are sometimes banished, and where they speedily die of malaria, not as the vulgar believe of emanations of the upas tree. He states also that the poison is the inspissated juice obtained by means of incision in the bark, and that if introduced into the circulation by the slightest wound it proves instantly fatal, although the natives feed with impunity upon the animals killed by arrows impregnated with the poison The Antjar Dr Horsfield states, is one of the largest trees in the forests of Java, the stem being completely naked to the height of 60 to 70 or 80 feet, and the bark white A puncture or incision being made in the bark, the juice or sap appears oozing out, of a yellowish

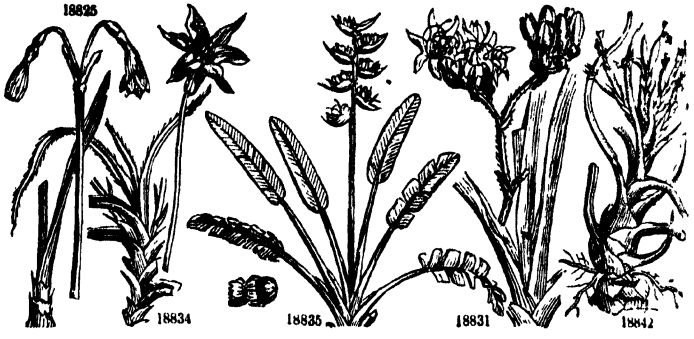
History, Use, Propagation, Culture,

colour and rather frothy from old trees, but paler and nearly white from young trees; when exposed to the surface becomes brown. The consistence much resembles milk, only it is thicker and viscid. The sap is contai in the true bark (cortex), which yields the juice in considerable quantities The inner bark (liber) is of a close fib texture like that of *Morus papyrifera*, and when separated from the outer bark resembles a coarse piece of linen a is made into ropes and coarse clothing. It is only when the trees are largely wounded and when felled, by w large portion of the juice is disengaged, the effluvia of which mixing with the atmosphere affects the pers exposed to it with cutaneous eruptions, and heat and itching of the eyes The rapidity of the effects of the ...

[10-celled seated in a campanulate 6-lobed calyx
21281 Glabrous Leaves sessile stem-clasping coriaceous orbicular obtuse or acute, Fruit turbinate woody 10-seeded
21282 Leaves bifarious oblong-lanceolate glabrous, Pedunc les axillary on the younger branches, Flowers silky, Male peduncles 3- or many flowered Female 1-flowered Corolla urceolate with a 5-lobed spreading limb those of the hermaphrodite flowers with about 16 stamens and a 5-lobed stigma

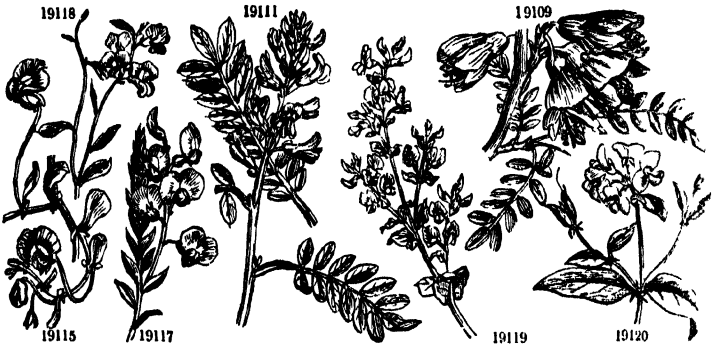
21283 Lvs large smooth reddish cord 3-nerved downy on the nerves beneath sometimes repandly tlthd, Fruit collected in bundles of 8-12 near root, turnip-shpd ribbed with ribs having umbilicus closed by numer cord imbric scales
21284 Lvs cordate-ovate obt ser-crenate 3-nerved downy, Fruit axil and lat pedunc sol oval smooth Near *F. Carica*
21285 Branches and petioles clothed with rusty tomentum, Lvs broad elliptic and obovate long acum glabrous above but downy beneath with prominent nerves, Fruit solitary globose pendulous almost as long as peduncles
21286 Branches and petioles rather scaly, Lvs alternate on short petioles elliptic or obov-oblong pointed shining above and ruteavent beneath ent 5 nerved and reticulately veined Fruit axil twin or Lateral subfascicled globose or ellip contracted into a long stipe at base tribracteate Stipe hispid
21287 Leaves rough oblong narrowed at base fiddle-shaped 3-nerved entire deep green above puberulous on the nerves beneath
21288 Branches terete hairy at tops Petioles hairy Lvs broad-oblong lanc short acum tapering to base entire feather-veined shining above glabrous, Fruit usually twin sessile globose rather depressed covered with silky villi. Habit of *F. elastica*
21289 Creeping radicant Branches subretrorsely villous, Lvs distich alternate on short petioles ovate cordate acutely apiculated entire 3-nerved 4-ribbed on both sides, glabrous above or pilose, villous beneath

and Miscellaneous Particulars.



The Hon. Field states, depends in a great degree on the size of the vessels wounded, and on the quantity of the poison conveyed into the circulation but in general it is from a quarter to half an hour after its introduction it proves fatal He regards the convulsions accompanying the action of the poison as a subordinate and secondary symptom, and not as the result of any direct action of the poison upon the brain or nerves, but by rendering the heart insensible to the impetus of the blood and stopping the circulation

Ficus Roxburghii The fruit is larger than the common fig, and eaten by the natives in their curries, where it is indigenous



G. D.

SUPPLEMENTARY LIST

OF

PLANTS LATELY INTRODUCED, AND NOT INCLUDED IN THE BODY OF THIS SUPPLEMENT,

WHICH ARE REMARKABLE FOR THEIR RARITY, UTILITY, OR BEAUTY.

ABELIA TRIFLÒRA *R Br* Bot Mag t 4694 An ornamental hardy shrub from the north of China, with blush-tinged flowers the sepals of the calyx being of a reddish brown

ABIES BRACTEATA *Hook & Arnott*, Bot Mag t 4740 A very beautiful fir from California, remarkable for the long spiny bracts of its cones Seeds of this species have been sent home to Messrs. Veitch by their collector, Mr William Lobb, and numerous plants have been raised.

ABIES KEMPFERI *Lindl* This species forms a beautiful tree, 120 or 130 feet in height, with a deciduous habit It has been introduced by Mr Glendinning, and it is supposed that it will prove quite hardy, having been found in the central, northern, and eastern provinces of China

ABIES HOOKERIANA *Murray* This exceedingly beautiful A'bies is one of the conifers introduced by Mr William Murray of San Francisco who found it high up in the Californian mountains, about lat 41° N., where the ground was already covered with snow on the 16th of October It is closely allied to *A Pattoniàna*, but there are distinguishing characteristics The cones are of a light fawn colour, somewhat of the hue of the cone of the common larch The scales are larger than those of *A. Pattoniàna*, and are not crenulated. The bract commences to contract near the top The seed and the wing are longer than in *A Pattoniàna*, and the wing is of a rich fawn coloured The tree attains the height of about 50 feet.

ABIES PATTONIANA This is also a very beautiful species, introduced by Jeffrey, and figured by the Oregon Committee Jeffrey describes it as attaining the height of 150 feet, towering over the rest of the forest The cones are uniformly of a dark brown colour The scales are at least a third less than those of *A Hookeriàna*, and are deeply and firmly crenulated The bract does not contract near the top The seed and wing are about one third shorter than in *A Hookeriàna*, and the wing has a purplish brown tinge at the top and back

ACROCLINIUM ROSEUM A beautiful new half-hardy annual from South-West Australia, with everlasting lively rose-coloured flowers It requires the same treatment as other greenhouse annuals

ADENOCHILUS CHRYSANTHUS A rather showy species from Colombia, requiring the ordinary treatment of other stove perennials Flowers golden yellow, with a red velvety calyx The leaves are of a glossy velvet-like purple on the under side

ADIANTOPSIS SCHIMPERI A coarse-growing stove perennial from New Grenada, with violet flowers, which are white within below and have a red calyx The leaves are purplish violet on the under side

ALLOPLECTUS ACUTIFOLIA *B & P* A rather pretty greenhouse undershrub from Bolivia, with bright scarlet flowers

ANDROMEDA DANIELLI This is a curious stove perennial from western tropical Africa, and is one of the Mellagetta Peppers The flowers are red and whitish, tinged with rose and yellow

ANGRÆCUM RUCKERI SANGUÍNEA A handsome variety of a beautiful and well known orchid, with flowers of a uniform reddish chocolate brown

ANOECTOCHILUS ÁLBO-MARGINÀTUS. A dwarf variegated-leaved terrestrial orchid, requiring a warm damp stove.

ARGHLANDRA LATEVÍTIA A beautiful stove shrub from Guatemala. The flowers are arranged in a cone-like head, and are of a dull scarlet, with the tube yellowish

ARGHLANDRA SQUARROSA LEOPÓLDI A very showy variegated-leaved soft-wooded stove shrub from Brazil, with very handsome spikes of yellow flowers. The leaves, which are of a deep green, are marked by well-defined longitudinal white veins

ARECASTRUM ROSTRATUM A noble palm from Brazil, which has flowered in the palm-house at the Royal Botanic Gardens Kew The leaves are from 6 to 8 feet in length, and the flowers are whitish

AZALEA AMŒNA *Lindl*, Bot Mag t 4728 A neat-growing and very pretty species from China, with purplish crimson flowers, the calyx being large and coloured like the corolla It requires a greenhouse.

AZALEA CRISPIFLÒRA *Hook* Bot Mag t 4726 A very showy plant, differing from other Chinese Azaleas chiefly in its flowers which are of a rosy crimson, having a crisped margin, which is a very pleasing feature Introduced from China and requires the treatment of the greenhouse species of *Azalea*

AZALEA INDICA BEALEI *Hort* A very beautiful variety from China, with the flowers striped with bright vermilion on a white ground An evergreen shrub, very suitable for conservatories.

AZALEA INDICA NARCISSIFLÒRA A curious and, at the same time, handsome variety, with double white flowers, from China and forming an useful greenhouse evergreen shrub

AZALEA INDICA STRIATA FORMOSÍSSIMA A seedling raised by Mr. Taylor, gardener to J Coster, Esq , of Streatham, and brought out by Messrs. Veitch and Son The flowers, which are of good form and substance, are of a pure white flaked and spotted with light purple , and the habit of growth of the plant is exceedingly good.

BAHIA LATIPÒLIA *Lindl* A handsome hardy Californian annual, with deep yellow flowers.

BEGÒNIA MINIÀTA. This is a broad-leaved variety of *B fuchsioides*, with vermilion-coloured flowers. Introduced from Colombia, and requiring the treatment of a stove perennial

BEGÒNIA OPULIFLÒRA An ornamental stove undershrub from New Grenada, with pure white flowers, which have golden stamens, produced in heads resembling the Guelder Rose

BEGÒNIA PRESTONIÉNSIS. A very beautiful variety of this fine hybrid scarlet-flowered Begonia, named *superba* was exhibited in the summer of 1854 It is, like the original, a very showy plant

BÉRBERIS CONCINNA *J D Hook* Bot Mag t 4744 A very pretty hardy shrub from the Sikkim Himalaya, with small spiny-edged leaves and yellow flowers, which are succeeded by oblong scarlet berries

BILLBÉRGIA BIFRONS *Lindl.* A showy dry-stove perennial from Brazil In one variety the flowers are of a fiery red while in another they are of a whitish yellow

BORÒNIA DRUMMÒNDI *Hort*, Planch. Flore des Serr ix. t 881 This is a charming little shrub from the west coast of New Holland, the flowers are of a beautiful rose colour, with a balsamic odour. It requires only a moderate greenhouse, and is easily multiplied by cuttings

BRASSAVÒLA FIMBRÀTA *Hook*, Bot Mag t 4734 An ornamental stove epiphyte from South America, with large white flowers, the sepals being tinged with yellowish green and red

BRAVÒA GEMINIFLÒRA *La Llave et Lex*, Bot Mag t 4741 This is a very beautiful Amaryllidaceous plant from Mexico, where it is found, according to La Llave and Lexarça, growing on the mountains of Valladolid at Michiacan It has a tuberous root, and is easily cultivated in a warm greenhouse, where it blossoms in May The flowers, usually geminate in the upper part of the raceme, are very graceful, always drooping, and of a fine orange-red

BRILLANTAÍSIA OWARIÉNSIS *Palis de Beauv*, Bot Mag t 4717 *Acanthàceæ* This plant in its habit of growth resembles some of the largest species of *Sàlvia*, the flowers are of a violet blue It is a native of Sierra Leone, whence it was introduced in 1853

BÚDDLEA CRÍSPA *Benth.*, Bot. Mag. t 4793 A native of the Himalaya, much hardier than the common kinds its leaves are heart-shaped at the base, and covered on both sides with a thick whitish down, and the flowers are of a pale violet It was introduced by Major Madden.

BRYA EBENUS *Dec* Under this name is figured in the *Bot Mag* t 4670, the well known Jamaica Ebony which is given in p 604. No 10,014, under the name by which it was formerly known, viz *Amerimnum Ebenus*

CALCEOLÀRIA ERICOÌDES *Vahl* A curious half-hardy subshrubby species from Colombia, with small yellow flowers

CALCEOLÀRIA HYSSOPIFÒLIA *H B. et Kunth* An elegant half-hardy undershrub from Quito, the flowers of which are white and yellow.

CALCEOLÀRIA VIOLACEA A half-hardy shrub from Chili, having a novel and interesting appearance The flowers are of a dull violet

CALYPTRÀRIA HÆMÁNTHA *Planch*, Flore des Serr ix t 924 *Melastomàceæ* A magnificent plant, nearly allied to *Medinilla magnifica* the flowers are large, of a dark purple, with long white anthers It is a native of New Grenada, and requires only a moderate stove

CAMPANUMŒA LANCEOLÀTA *Sieb & Zucc*, Flor Jap 1, 174 *Campanulàceæ*. A curious perennial plant found in Japan, with greenish flowers, requiring protection during winter

CASSIOPE FASTIGIÀTA A charming little hardy evergreen shrub from the Himalaya, requiring a cool, moist peaty soil. The leaves are closely imbricated in four rows, the flowers are drooping, white, and bell-shaped

CATTLÉYA LUTÉOLA A rather pretty small-flowered epiphytal orchid from Brazil The flowers are of a clear yellow

CEANÒTHUS FLORIBÚNDUS A beautiful hardy evergreen shrub from California, having a good habit The flowers are of a rich deep blue, and are produced in dense globular heads, which are thickly studded over the branches and branchlets Introduced by Messrs Veitch through Mr Lobb

CEANÒTHUS LOBBIÀNUS This is another of Mr Lobb's introductions from California. It is a distinct and showy hardy evergreen shrub, with deep blue flowers, which are produced on stalked oblong or roundish heads

CENTROPÒGON TOVARIÀNSIS A very handsome stove perennial from Venezuela, with beautiful rosy-crimson flowers

CERATOSTÈMA GRANDIFLÒRUM *Ruiz & Pav*, Bot Mag t 4479 A small shrub, a native of the Andes of Peru, extremely elegant in its appearance, and remarkable for the beauty of its flowers, which are of a reddish colour and bear considerable resemblance to those of *Cántua dependens*

CÉRCIS JAPÓNICA *Van-Houtte*, Flore des Serr. viii p 269. t 849. A species of the Judas-tree, with leathery leaves and an abundance of flowers It is a native of Japan, and is perfectly hardy in this country

CÈREUS LEMAÍRII This is a very fine new bright-blooming species, which is reported to have been introduced from Antigua The flowers are very large, being twelve inches long and nine inches broad, on the outside green tinged with red, and white inside The plant, which has a straggling habit of growth, requires a dry stove

CÈREUS MACDONALDIÆ *Hook*, Bot Mag t 4707 A magnificent species of *Cèreus* from the Honduras, nearly allied to *C grandiflorus*, and flowering in the night, like that species

CEROCHÍLUS RUBENS An orchid of no great beauty, allied to *Physùrus* The flowers are greenish with pink bracts The plant requires the treatment of stove perennials It is supposed to be from the East Indies

CEROPÈGIA THWAITÉSII A botanically interesting stove climber from Ceylon, with the flowers green and brown

CÉSTRUM REGELII *Planch.*, Fl des Serres, ix t. 946, Habrothámnus aurantiacus *Regel* This very elegant shrub which is quite different from *C aurantiacum*, is a native of Central America, and flowered for the first time in Europe in the Botanic Garden at Zurich in 1850

CHÆTOGÁSTRA LINDENIÀNA A very ornamental species from the alpine districts of the Andes of Colombia and requiring a cool stove or greenhouse. The flowers are large, and of a blackish purple.

CHEIRANTHÈRA LINEÀRIS A handsome greenhouse shrub from New Holland, with violet-blue flowers.

CHIONÁNTHUS RETÙSUS. A shrub with white sweet-scented flowers, from China, which will probably prove hardy in this country.

CLÉMATIS BARBELLÀTA *Hook*, Bot Mag t 4794. A very beautiful species from the Himalayas, introduced by Major Madden, which flowered for the first time in Europe in the Glasnevin Garden in 1854. The flowers are rose coloured, with the edges of the sepals marked with white.

CLÉMATIS CORIÀCEA *Dec.* This is a showy greenhouse climbing species from New Holland, with large pendulous white flowers.

CLÉMATIS LANUGINÓSA PÁLLIDA. A variety with much paler flowers than the species While in the species the flowers are blue, in this variety they are greyish, almost white A hardy climber, from the north of China.

CLÉMATIS PÁTENS This is the correct name for the species which in England is generally called *C. cerùlea* A fine large-flowered variety of it, called "Sophia," has recently been raised, having a broad green band down the sepals of the calyx

CLERODÉNDRON BÚNGEI When well cultivated, this forms a showy shrub somewhat resembling the single-flowered *C. fragrans* It is from the north of China, and has rose-coloured flowers

CYRTÁNTHUS PANDURÁTA A fine stove epiphyte from Borneo, introduced by Messrs. Low, of Clapton. The flowers are large and of a pale green, the lip being of a yellowish green with broad black veins and stains.

DRACÆNA BEÇKERI *Benth*, Bot Mag t 4754 The leaves of this species, which forms an undershrub requiring a stove, are curiously and beautifully variegated with dark chocolate on a pale green The plant is a native of Java, and produces its purple and white flowers in whorled racemes

ECHEVÈRIA ALBANIÁCEA This is a showy subshrubby greenhouse species from Central America, with brilliant orange scarlet flowers

ERYTHRÆA DIEREILLOIDES A very showy stove shrub from Colombia The flowers which resemble those of the beautiful *Weigela rosea*, are white inside and pink on the outside, and they are produced in rich terminal panicles

EURYANDRA FLAVA *Hook*, Bot Mag t 4710 A rather weedy looking stove undershrub from Sierra Leone. The foliage is somewhat coarse, and the flowers, which are yellow, are sparingly produced and of short duration.

FINUS LAMBERTIANA This was the handsomest tree seen during the whole of the expedition under the direction of Mr. William Murray of San Francisco, for exploring the range of mountains which runs between the coast range and the Rocky Mountains, lat 40°, 41°, &c., N It was found on the banks of a stream in a valley on the mountains, attaining the height of 100 feet, with a stem 2 feet in diameter The foliage is most delicate and graceful The branches spread upwards like a Spruce Fir, and hang down at the tips like an ostrich feather, the top shoots drooping like a Deodar The timber is good, clear, and workable "

FUCHSIA MACNABIANA "This is the same species as one sent home by Jeffrey without a name, and distributed by the Oregon Committee in 1852 The cone is about the size of a hazel nut, with hard scales, having a projecting umbo in the centre " The plant is of low growth, and very suitable for a shrubbery

GYNANDRIRIS MACROPHYLLUM An ornamental very large leaved species from Algiers, with pink and rose coloured flowers, requiring the treatment of a greenhouse tuberous rooted perennial

GYMBIDIUM PÉNDULUM ATROPURPÚREUM A variety of the well-known orchid *C. pénduluum* with deep purple flowers, the lip being ribbed with yellow Introduced from Borneo and requiring to be treated as a stove epiphyte

CYPRIPEDIUM VILLOSUM This fine showy orchid which in some degree resembles *C. insigne* was introduced from Moulmein by Messrs Veitch and Son The flowers are green, brown, and purple, and the plant requires the treatment of a stove perennial

DENDROBIUM CYMBIDIOIDES *Lindl*, Bot Mag t 4755 An epiphytal orchid from Java, with ochreous yellow and red very showy flowers

DIEFFENBACHIA MACROPHYLLUM GIGANTÈUM This is a very showy plant, with light rose-coloured flowers, which are considerably larger than usual Obtained from the Continent by Messrs Veitch and Son

DIPLOTHRIZANDRA LEUCOPHTHÁLMOS *Hook*. Bot Mag t 4743 An interesting stove perennial from Brazil, the flowers of which are of a deep blue with a white eye, and are produced in radical panicles

DIPLOTHRIZANDRA PÍCTA This is a very neat and pretty stove perennial, introduced by Messrs Low and Co., and said to come from Brazil The leaves are longitudinally blotched with brown on the upper side, and are pink on the underside The flowers are white and purple

DORYANTHUS PAVONII *Decaisne*, Bot. Mag t 4750 A somewhat curious stove climber from New Spain, with rather dingy Sapotia like flowers, which are greenish and marked with concentric pale-brown lines

DRACOCARPUS HUMBOLDTIANA *Gardn*, Bot Mag t 4757 A pretty little plant, with pale violet flowers, introduced from Ceylon by Mr Thwaites, in 1853.

EUCHARIDIUM AMABILE *Carr* Flor des Serres, t 855, Weigèla amábilis *Hort* A very handsome shrub, a native of Japan nearly allied to *Weigela rósea*

EUCHARIDIUM MIDDENDORFIANA This is the plant which is called the yellow *Weigela* It is a hardy shrub with primrose coloured flowers, which are about half the size of those of *Weigela rósea* Continental nurserymen received the plant from Russia

DIOSCOREA BATATAS *Dec*, D japónica *Hort* This new Chinese yam, which promises to be one of the most valuable vegetables introduced since the potato differs from the *D. japónica* of *Humb*, with which it was at first confounded The edible part is a long tuberous rhizoma, which, when cooked, is white, extremely farinaceous, and almost destitute of woody fibre; in fact, it is only to be distinguished by the shape from the best kind of potatoes The plant is perfectly hardy, and M Vilmorin, who has cultivated it on a large scale near Paris finds its produce enormous The only difficulty is that the long tubers penetrate deeply into the ground, and are troublesome to take up, and on this account the plant is generally grown in trenches, so that the tubers may extend horizontally

DRYOPTERIS HOÓKERI A succulent greenhouse shrub from Mexico, resembling a species of *Echevèria* The flowers are of a yellowish red

DIPLADENIA FLAVA *Hook*, Bot Mag t 4702 A showy climbing shrub from New Grenada, requiring a stove The flowers which are produced in May, are large and of a rich yellow, resembling those of a species of *Allamánda*

DRACÆNA ELLIPTICA MACULÀTA An evergreen stove shrub from Java, with variegated leaves and greenish flowers. Very ornamental in the habit of its growth

ECHITES PELLIERI This is a synonyme of *Nerùndra suberécta*, which see.

EMBOTHRIUM LANCEOLÀTUM. A fine evergreen Proteaceous shrub from Chili, which will probably prove half-hardy this country It is allied to *Telopea*.

ERICA MELITTIFOLIA *Mart* Bot Mag t 4720 A rather coarse-growing stove perennial from the West Indies, with tall stems, large leaves, and small red flowers, which are produced in March and April

ERIGERON COMPÓSITUM *Dougl*, Bot Mag t 4703 This is a hardy perennial, of botanical interest, from Oregon, having rather a weedy appearance It produces its small yellowish-white flowers in great abundance

FABRONIA PÚNGENS *Linden* A pretty greenhouse shrub from Merida, producing numerous pinkish-white flowers

FICOIDES NOLTZIA TENUIFÒLIA A very pretty hardy annual from California, with a compact and dwarf habit The flowers are yellow, and an inch across Introduced by Messrs Veitch and Son.

EUGÈNIA OLEÓIDES. An evergreen greenhouse shrub, having a very graceful appearance. The flowers are white, and are produced in axillary panicles. It does not appear to be known whence the plant has been obtained.

EXACUM MACRÁNTHUM. A beautiful stove annual or biennial (probably an annual) from Ceylon, with rich deep-purple flowers.

FRÁXINUS DIPÉTALA. A fine hardy tree from Mexico, with purple branches, green leaves, and elegant white flowers.

FRITILLÀRIA OXYPÉTALA *Royle*, Bot Mag. t 4731. A pretty half-hardy bulbous perennial from Kumaon. The flowers are of a purplish lilac, with purple dots near the centre, and are produced in June.

FÚCHSIA DOMINIÀNA This is a fine hybrid, raised in the nursery of Messrs Veitch and Son, at Exeter, by the foreman of the houses there, in compliment to whom it is named In it the distinguishing characteristics of the two beautiful species *F serratifólia* and *F spectábilis*, may be said to be combined, for it has the foliage of the former, with the flowers very much resembling those of the latter species Moreover, it is very valuable for the conservatory, as it blossoms during the winter months, a period of the year when generally there are so few plants in flower.

FÚCHSIA VIOLÆFLÒRA PLÈNA This is a beautiful new double purple variety, raised by Messrs Lucombe, Pince, and Co., of the Exeter Nursery, with a rich purplish-blue corolla, resembling a fine double violet.

FUCHSIAS WITH A WHITE COROLLA Some very beautiful hybrids, with the corolla of a beautifully pure white are just being brought out by Messrs E G Henderson and Son, of the Wellington Nursery, St John's Wood, London, and Messrs. Lucombe, Pince, and Co , of Exeter. These were raised by the late W Storey, Esq of Newton, in Devonshire, an energetic hybridiser, who, by well-directed efforts, succeeded in obtaining, after two or three generations of seedlings, varieties of improved form, good substance, and excellent habit of growth One of these hybrids has a pure white corolla, with brilliant scarlet sepals, which are finely reflexed, while another has a pure double white corolla, resembling a fine large double Snowdrop, the sepals being of a rich scarlet

GALEÁNDRA BAÉRII FLÓRIBUS LÚTEIS *Hook*, Bot. Mag t. 4701. This pretty epiphytal orchid from South America has drooping bunches of deep yellow flowers, the lip being marked with crimson dotted lines.

GARDÈNIA GLOBÒSA. This is a neat evergreen greenhouse shrub from Caffraria, with fragrant white flowers

GRISSOMÈRIA NÍTIDA *Nees* An ornamental stove undershrub from Brazil, with brilliant scarlet flowers.

GENTIÀNA FORTUNI An exceedingly beautiful herbaceous plant, the flowers of which are of a deep blue, spotted with white. It is from the north of China, and it is considered that it will prove quite hardy.

GÉSNERA DONCKELAARIÀNA This is a beautiful hybrid, which is said to have been raised in the Ghent Botanic Garden, between *Gésnera discolor* and *Gloxínia sùbsa*. The plant is very showy, bearing panicles of rich crimson Gloxinia-like flowers

GÍLIA LÚTEA. See *Leptosíphon lúteus*

GOLDFÚSSIA GLOMERÀTA SPECIÒSA A showy, although a coarse-growing, soft-wooded stove shrub from Sylhet, the flowers of which are of a deep purple

GOMPHRÈNA COCCÍNEA An ornamental perennial from Mexico, requiring a warm greenhouse, and the treatment usual for tender annuals.

GONÓLOBUS PYRRHÓTRICHUS This is rather a coarse-growing, though curious stove climber, from Brazil The flowers are of a dull green, with obscure netting and fine bright yellow coronal teeth.

GYMNOSTÀCHYUM ZEYLÓNICUM *Arn et Nees*, Bot Mag t 4706 A stove perennial from Ceylon, with variegated leaves, having milk-white stains upon a dark green ground. The flowers are white, tipped with green and yellow.

HÆMÁNTHUS INSÍGNIS *Hook.*, Bot Mag t 4745. A very showy greenhouse bulbous plant from Natal, with crimson flowers, which are produced in large heads surrounded by leafy bracts.

HEDARÒMA TULIPÍFERUM. This promises to be a valuable greenhouse evergreen shrub. It resembles a broad-leaved *Diósma*. The beauty of the plant consists in the involucre surrounding the flowers. this is cup-shaped, and of a greenish white stained with dull red. *The plant is from New Holland*

HEDÝRA GLOMERULÀTA This is a curious evergreen stove shrub from Java. It is very elegant when in flower though the flowers themselves are green and inconspicuous.

HEXACÁNTRIS MYSORÉNSIS LÚTEA. One of the many beautiful introductions of Messrs Veitch and Son It is a showy evergreen stove climber from India, with large yellow flowers, which are produced in pendent racemes

HIPPEÁSTRUM FORMOSÍSSIMUM. A very showy stove bulb, the flowers of which are of a deep crimson, resembling in colour the Jacobean Lily, but being larger and of the form of *H vittàtum*.

HÓLCUS SACCHARÀTUS *Hort.*; Andropògon saccharàtus *Kunth*, the Chinese sugar-cane. This plant, though very recent introduction into this country, appears to have been first sent to Europe nearly a century ago as is mentioned in the *Bon Jardinier* for 1855, from which the following account is extracted, that a Chinese plant apparently identical with it was used in the fabrication of sugar at Florence, in 1766, by Pietro Arduino appears however, to have been soon lost, as no other traces have been discovered of it The present plant has the habit of growth of the maize or Indian corn, and it forms a tuft of eight or ten stalks from each root The flowers, which are in conical panicles, are green at first, but afterwards become purple. The plant, which is an annual, appears quite as hardy as the Indian corn, and it should be sown in a light rich soil, about the same time as the first sowing of kidney-beans. Juice is found in abundance in the pith of the stalks, and it produces sugar and alcohol, like the juice of the true sugar-cane. The leaves also furnish an excellent forage, and a kind of cider is made from the young or imperfectly ripened shoots. The importance of this plant, if only a part of the qualities attributed to it prove correct, can hardly be overrated, not only as regards the sugar, which is about a third more than is produced by an equal weight of beet-root, but with regard to the alcohol, which is in the proportion of 63 to 3 equal weights of the Hólcus and the Beet-root.

HOY'A FRATÉRNA *Blume*, Bot Mag. t. 4684 This very fine, new, and distinct species of *Hoya* was first detected in Java by Blume. subsequently it has been found by Mr Thomas Lobb, and sent by him to Messrs. Veitch and Son. It is a climbing stove plant with leaves remarkable for their great size, firmness, and thickness The flowers are of a pale yellowish buff colour, and are produced during a great part of the summer and autumn

HYDRÒLEA AZÚREA A pretty little greenhouse branching perennial plant from Mexico, profusely covered with beautiful azure flowers, against which the stamens stand out like little stars.

HYPÉRICUM OBLONGIFÒLIUM *Choisy*. A handsome and, it is said, a hardy shrub from the East Indies, with reddish yellow flowers.

HYPÓXIS LATIFÒLIA. An interesting bulbous or tuberous-rooted greenhouse perennial from Natal, with star-shaped yellow flowers.

ECLINUS CANARIENSIS *Lem. & Koch.* Fl. des Serres, t 913 *Loaseæ*. A splendid climbing plant from Central America, with orange-scarlet flowers as large as those of the *Cobæa*. It is half-hardy, and may be propagated by cuttings or by seeds which it ripens freely.

HANTOPHYLLUM MINIATUM *Hook.*, Bot. Mag t 4783. *Amaryllidàceæ* Introduced in 1854 from Western Africa, with crimson or rose-coloured flowers, as large as those of a *Crinum*

IMPATIENS HOOKERIANA *Arn* Bot Mag t 4704 A lovely Balsam from Ceylon, which blossomed in the stove at the Royal Botanic Gardens, Kew in the summer of 1852 The leaves are large and glabrous; and the flowers, which are of a pure white with deep blood-coloured veins on the lower portion, are the largest of any known species

IMPATIENS JERDONIÆ *Wight*, Bot. Mag t 4739 This is a very beautiful species received from the Neilgherries, at the Royal Gardens of Kew, in 1852 It has a neat dwarf habit, is of easy cultivation, requiring the temperature of a warm greenhouse or stove, and continues to produce a profusion of its large and strikingly formed flowers, which have a mixture of green bright red, and yellow in them, for several months. Messrs. Veitch and Son have succeeded in raising a good supply of this charming little Balsam

IXORA FERRUGINEA A beautiful stove shrub from Brasil, with the flowers crimson shading off to pink.

IXORA LOBBII This handsome Ixora is one of the numerous beautiful plants received by Messrs Veitch and Son from their collector Mr Lobb, in compliment to whom it is named

KNIPHOFIA UVARIA This is an old name, proposed to be revived for a Cape plant bearing a dense ovate cylindrical head of rich orange or scarlet flowers, and forming one of the handsomest of border plants, introduced long since, and known as *Tritòma*

LACHENALIA AUREA This is a very handsome greenhouse bulbous plant from the Cape of Good Hope, with tubular pendent flowers, which are of a deep orange-yellow.

LACUSTA AROMATICA A handsome fragrant fleshy-leaved evergreen shrub from the mountains of Chili Introduced by Messrs Standish and Noble, who are not able as yet to speak positively as to its hardiness.

LEPACHYS COLUMNARIS *Dec Compositæ*. A native of Texas, nearly allied to *Rudbeckia*.

LEPTOSIPHON CILIATUS *Benth* A rather pretty hardy annual from California, the flowers of which are rose coloured, with a yellow throat

LEPTOSIPHON LUTEUS *Benth.*, Gilia lùtea *Steud*, Bot Mag t. 4735 This highly ornamental dwarf half-hardy annual was introduced in 1852 by Messrs Veitch and Son, through Mr William Lobb, from California The unusual length and slenderness, in conjunction with the colour, of the corolla, which is of a bright sulphur-yellow with a dark, almost orange-coloured eye, and the great quantity of flowers produced on the stems and branches, render this plant extremely ornamental, especially when cultivated in beds in masses. There is a variety called *L. luteus aúreus*, the flowers of which are of a deeper colour than those of the species

LIBOCEDRUS DECURRENS *Torrey* This is a newly introduced species of this fine genus of conifers. It is in the possession of Messrs Lawson and Son, of Edinburgh and London By some it is thought to be synonymous with the rare *Thùya gigantèa*.

LILIUM GIGANTEUM *Wall*, L cordifolium *Don*, Bot Mag t 4673 For the discovery of this noble plant, which may justly be called the Prince of Lilies, we are indebted to the exertions of the late Dr Wallich, who detected it in moist shady places on Sheopore in Nepal "This majestic lily," observes Dr Wallich, "grows sometimes to a size which is quite astonishing, a fruit-bearing specimen of the whole plant, which is destined for the museum of the Honourable East India Company, measured full ten feet from the base of the stem to the apex. The flowers are proportionably large and delightfully fragrant, not unlike those of the common White Lily" Nor is it found to degenerate in cultivation, for flowering plants have attained a height of ten feet in one season, the flowered portion occupying twenty inches. Such a raceme of flowers, accompanied by bold heart-shaped leaves ten or twelve inches long and eight inches broad, cannot but afford a striking spectacle The flowers are white or rather cream coloured, marked with purplish-crimson. The plant should be treated as a greenhouse or hardy bulb It produces seed abundantly

LINANTHUS SULPHUREA ODORATA A new and beautiful hardy annual, with a rather dwarf bushy habit of growth, and very suitable for pot culture as well as for the open border in the flower garden. The lower half of the petals is of a deep sulphur colour, while the upper half is of a beautifully pure white, and there are rosy pink markings down each petal which are darker near the base than at the apex The filaments of the stamens are also of a rosy pink The flowers are larger than those of either of the other kinds of *Limnánthes*, and delightfully fragrant

LITTONIA MODESTA *Hook*, Bot. Mag t 4723. *Uvulariæ*. A native of Port Natal in Western Africa It produced its fine orange-coloured flowers in the Kew Gardens in April 1853, only three months after the planting of the tubers.

LOBELIA GRUNDIFLORA A rather pretty Mexican greenhouse perennial with red flowers, which continue expanding in succession the whole of the summer

LOMARIA CHILENSIS This is a fine robust-looking and ornamental hardy fern from Chili.

LOPEZIA MACROPHYLLA *Benth*, L grandiflòra *Fl Bot Zeit*; Jàlibi fuchsioides *Hort. Germ.*, Bot Mag. 4724 An ornamental greenhouse undershrub from Mexico, with bright-red fuchsia-like flowers, which are produced in March The root is said to be tuberous and fleshy.

LYCASTE CONSTATA A large-flowered epiphytal orchid from Peru. The colour of the flowers is green with a tint of white lip

LYSIMACHIA PSCHENAULTII. This is a pretty plant, and it is found to be very useful for planting in the flower garden as well as suitable for being grown in pots It is a half-hardy undershrub, a native of the Neilgherries, whence it was introduced by Messrs. Osborn and Son, of the Fulham Nursery. The flowers are rose-coloured, and are produced in dense racemes.

MARANTA WARSCEWICZII This is a stove perennial from Central America, remarkable for its finely variegated leaves which are of a deep green, marbled with grey about the midrib, and purple on the underside. The flowers do not appear to be known

MARCETIA ANDICOLA *Linden*. Fl des Serres, t 914. *Melastomàceæ* A beautiful little shrub from the mountains of Venezuela with leaves like those of a myrtle, and rose-coloured flowers, which it produces in great abundance It only requires protection from frost.

MARSDENIA LUCIDA This is a robust-growing climbing plant from the Himalayas, with rather dingy purple flowers, and fine thick foliage. In Ireland it has proved to be hardy

MATHIEU'S GALANTHOIDES A rather diminutive stove bulb from Peru, with the habit of a Snowdrop. The flowers, which are erect, are white tipped with green.

MAXILLÀRIA HIRTILÀBIA *Lindl.* A showy epiphytal orchid from New Grenada, the flowers of which are yellow stained with purple.

MERIÀNA MACRÁNTHA. This is an ornamental stove shrub from Venezuela. The habit of growth is compact and neat, and the flowers are scarlet.

METHÓNICA VIRÉSCENS PLÁNTII This is the *Gloriòsa Plantii* of English gardens It is a native of Natal and a curious and showy The flowers are orange-coloured The plant should be treated as a warm-greenhouse tuberous-rooted perennial.

METTERNÍCHIA PRÍNCIPIS *Mikan*; M. princeps *Miers*; Lisiánthus ophiorrhiza *Vell*, Bot Mag t 4747 This new genus from Brazil, belonging to *Solanàceæ*, which has been named in compliment to the Austrian Prince Metternich. In its native country it attains the height of twenty-five feet In England it must be regarded as a cool-stove shrub, and as flowering in August The flowers are large and funnel-shaped, though not very showy their greatest charm, perhaps, consisting in their being powerfully and deliciously fragrant They are white with the tube greenish.

MONÓCERA GRANDIFLÒRA *Hook.*, Bot. Mag t. 4680 This is the new name for *Elæocárpus grandiflòra* Smith and *E. lanceolàta* Blume. a handsome evergreen stove shrub from Java

NERIÁNDRA SUBERÉCTA This is a fine showy stove climber with yellow flowers, which has been recently introduced from France under the name of *Echites Pellièri*

NYCTERÍNIA SELAGINÒIDES A pretty greenhouse annual from the Cape of Good Hope, with a dwarf spreading habit. Introduced by the Horticultural Society of London. The flowers are white, with a deep yellow eye they are produced in corymbs.

ODONTOGLÓSSUM EHRENBÉRGII A very neat and pretty epiphytal orchid from Mexico. It resembles, in a degree, *O. Róssii* The lip and petals are white, the sepals are of a greenish-yellow and spotted

ONCÍDIUM IONÓSMUM A beautiful species with yellow flowers, the sepals and petals being spotted with brown flowers have a delightful fragrance resembling that of violets

ONCÍDIUM REFLÉXUM CÆSIUM. This is a glaucous-leaved variety of *O reflèxum*, bearing the name of *O cæsium* the German gardens.

ONCÍDIUM UMBRÒSUM. A species from New Grenada, with unattractive flowers, which are green and dull purple

PAPÀVER PILÒSUM *Smith*, P olýmpicum *Sibth. MSS*, Bot. Mag t 4749 This is a hardy herbaceous Poppy it is believed, perennial roots, the flowers of which are large and handsome and of a brick-red colour pale, nearly white, spot at the base of each petal. It is said to be from Greece, but when or by whom into this country, there is no record

PÉNTAS CÁRNEA RÒSEA This is an improved variety of the well-known *Péntas cárnea*, which has been imported Messrs Osborn and Sons, of the Fulham Nursery, and which has much deeper coloured flowers, of a rose

PHACÈLIA RAMOSÍSSIMA *Benth* A hardy annual from California, with unattractive dull white and violet flowers

PHRYNIUM MICANS This is a stemless stove perennial from Peru, with dark-green leaves, having a central gitudinal streak of whitish red, while the underside is of a dull brownish red. The flowers are white, with bracts

PINCKNÈYA IONÁNTHA. A fine stove shrub from New Grenada, with dark violet flowers and a purple calyx which is divided so as to resemble a stalked petaloid leaf

PÍNUS BEARDSLÈYI *Murray*. From the description given of this new pine (which is one of those introduced by Murray, of San Francisco), it would appear more nearly to resemble *P. Benthamiana* than any other scribed species The cone, however, is not so long, being only three inches in length, while the leaves only six inches in length The sheath of the leaf is short, being only an eighth of an inch. Both the the seed and the seed itself are neither so long nor so large as in *P Benthamiàna*. The timber of *P Beardsleyi* is homogeneous all through "The tree is of great beauty and size one that was cut down measured in height and 44 inches in diameter at the stump Another tree next it measured 17 feet 4 inches ference, at 3 feet from the ground The stem was a very handsome column, about 30 feet to the first the timber good and clear It was found on the top of the mountain, at the same altitude as *P Jeffreyi monticola*, and *P grandis*, and higher than either *P Benthamiàna* or *P Lambertiàna*" The species named in honour of A F. Beardsley, Esq, who accompanied Mr Murray in his expedition

PÍNUS CRAIGIÀNA This is a Pine which also bears some resemblance to *P Benthamiàna* as well as to the preceding species (*P Beardsleyi*), from which, however, it differs in having the prickle of the scale pointing the tip instead of the base the prickle, too, in *P Craigiàna* is strong and firm, while in *P. Beardsleyi* small and weak, and the excrescence on the exposed part of the scale is much more developed in the than in the latter species, which has the exposed part somewhat flat, while in *P Craigiàna* the upper projects considerably over the lower "The wing of the seed of *P Craigiàna* is shorter and relatively broad the seed is nearly twice the size of that of *P Beardsleyi*, although the cones are about the same size of *P Craigiàna* is also very distinct from that of *P. Beardsleyi*, it is much finer and not so long, while its is considerably longer and more delicate. This species was found in the same mountains as *P Beardsleyi* one-fourth of a mile further down, though higher up than *P. Benthamiàna*. It spreads its branches wide the stems than *P Benthamiàna*, and sheds its seed a month later This Pine has been dedicated to Sir W Gibson Craig, who has done so much for the introduction and cultivation of this valuable family"

PÍNUS JEFFREYÀNA This is a hardy Californian Pine in the possession of Messrs. Low and Co, of Clapton which very little is at present known.

PÍNUS PARRYANA Another hardy Californian Pine, respecting which also little is known Also in the nurseries Messrs Low and Co.

PÍNUS ROYLEÀNA A new Indian two-leaved Pine, with small cones, named in honour of Dr J Forbes Royle is supposed that the species will prove quite hardy in this country, from its having been found growing at an elevation of from 8,000 to 10,000 feet. Introduced through the Horticultural Society of London

PITCAIRNIA ECHINÀTA *Hook*, Bot Mag t 4709 In a flowerless state this curious stove perennial may be said to be stemless, the leaves, which are two or three feet long, being all radical, as in the common Pine-apple The sepals of the calyx are red and yellow, and covered with prominent glands the petals are white or cream coloured, and twice as long as the sepals. The plant is reported to have been introduced from Mexico flowered for the first time in England in January, 1853, and continued a long time in blossom.

PITCAÍRNIA LONGIFÒLIA. This is an ornamental species from Lima. It is a stove shrub, with an erect elongated stem, and branched panicles of scarlet flowers.

PITCAÍRNIA MACRÓCALYX *Hook.*, Bot. Mag. t 4705 This is a South American species, coming nearest to *P maidifolia* *violens*, but quite distinct. It has the largest calyx of any known species, and it is altogether a fine looking plant. The sepals of the calyx are yellow the petals are large and white, and thrice as long as the calyx The plant requires a stove, and it flowers in December.

PITCAIRNIA SPECIOSA. This is a Brazilian species, forming a pretty and lively winter-blooming plant. It is a stove perennial with red flowers.

PITCAIRNIA SUAVEOLENS A showy stove perennial from Venezuela, with the flowers rose and scarlet.

PITTOSPORUM CRASSIFOLIUM This is a fine greenhouse evergreen shrub from New Zealand, with crimson flowers

PITTOSPORUM FLAVUM A very fine showy species from East Australia. It is a greenhouse evergreen shrub with large yellow flowers, which are produced in large corymbs.

PLUMBÁGO JAMESÓNI *Hook*, Bot Mag t 4751 This handsome stove shrub is named in honour of Professor Jameson, by whom it was found in the vicinity of Guayaquil. "Its great beauty consists in the fine red of the peduncles and outside of the flower, and the rich yellow of the upper or inner side of the corolla, and which, together with the great breadth of the lobes of the corolla and their acute apices, constitute the chief specific distinction." In these particulars no other species is found to accord with it. The plant flowers in the stove in July

POLYGÁLA CHRYSÁNTHA *Endlicher* A showy half-hardy annual from New Holland, with golden yellow flowers

POMAPÉDIS REVOLÚTA *Nees* This beautiful Brazilian stove shrub has recently been introduced by Messrs Veitch and Son It has fine laurel-like leaves, and clusters of graceful snow-white flowers, the tube of which is more than three inches long "The specific name," Dr Lindley observes, "was given upon the supposition that the leaves have their edges rolled back, but this occurs in so slight a degree as to cause regret that so fine a plant should not bear a more characteristic title."

PRIMULA MÓLLIS This is a very handsome hardy or half-hardy perennial species, with the habit of *P. cortusoides*. It has been introduced from the Mountains of Bhotan, and it has deep rose-coloured flowers.

PSAMMISIA PENDULIFLÒRA *Dec Frucheæ* A handsome low-growing cool-stove shrub from Venezuela, probably belonging to the genus *Thibaudia* The flowers are vermilion, with yellowish green —*P. sarcantha* Dec is also her dwarf shrub from the same country.

PSAMMISIA SCABROPHYLLA This is a showy stove shrub from Venezuela, with tubular drooping crimson flowers, which are tipped with yellowish white.

PUYA CHILÉNSIS *Molina*, Bot Mag t 4715. This is from North Chili, and is one of the most striking of Bromeliaceous plants The stem, or caudex, of a plant in the Royal Gardens of Kew, has now attained a height of four feet independent of the leaves, which are from three to four feet in length, spreading in all directions, the lower ones being reflexed "The compound spike of flowers upon the column-like perfectly straight peduncle, is remarkable for its size, the large full yellow (but inclining to green) flowers and the copious bracteas turning brown or black in age" This plant is called *Cardon* and *Puya* in Chili, where the soft substance of the stem is used for corks and bungs "The flowers yield a remedy for hernia, and the Indians use the spines of the leaves for pack-hooks" In this country the plant requires a cool stove A young plant was first brought home by Mrs Maria Graham, afterwards Lady Calcott

PUYA SCHIEDEÀNA *Hort Hernhauss*, Bot Mag t 4696 Although this species is far inferior in point of beauty and size to the splendid *Puya Altensteinii* var *gigantèa*, it is nevertheless a handsome-looking plant, and has the merit of flowering in the winter months (in December in the stove at Kew) The native country is unknown. The principal leaves of the plant at Kew spring directly from the root, they are two or three feet long, and gradually taper to a long point upwards, while below they lengthen into a narrow channelled base From the centre of the plant the peduncle arises, two feet or more in length and leafy below, the leaves like those from the root, but smaller, passing gradually into bracteas, which latter are erect, of a purplish red, and taper to a slender, rather pungent green point. The moderately large, pale, sulphur-coloured flowers are protruded much beyond the bracteas, and are sessile

QUÉRCUS INFECTÒRIA *Olivier* This is the Nut-gall Oak, a small evergreen tree from Kurdistan, which it is thought will prove scarcely hardy in this country

RHODODÉNDRON CAMELLIÆFLÒRUM *J D Hooker* This is one of the six new Rhododendrons of Assam and Bhotan discovered by Thomas J. Booth, Esq., and introduced in 1854 by Messrs F G Henderson and Son, all of which have been described in *The Magazine of Botany*, by Mr Booth's uncle, Thomas Nuttall, Esq., of Rainhill, the well known botanist and traveller This is a somewhat curious species, with pure white flowers, having a faint rosy tinge, and resembling a single Camellia It was found at Lablung, and also on the Bhotan Alps at an elevation of from 9,000 to 12,000 feet Dr Hooker first found this plant, but he did not succeed in sending either seeds or living plants home

RHODODÉNDRON CINNABÁRINUM PÁLLIDUM This is an elegant variety of one of the beautiful Sikkim Himalaya species, with rosy pink flowers It is quite hardy.

RHODODÉNDRON CITRÍNUM *Hasskarl*, Bot Mag. t 4797. An interesting greenhouse species, with pretty primrose-coloured campanulate flowers It is a native of Java, where it was found growing at an elevation of from 5000 to 6000 feet

RHODODÉNDRON KÉYSI *Nutt* Another of the beautiful Rhododendrons discovered by Mr Booth on the Bhotan Alps It was found on the northern ridges of the Lablung at an elevation of 10,000 feet, forming low thickets, above the range of *R. Hookeri* and *R. Falconeri* The habit of the plant is very distinct, and it is quite hardy The flowers are produced in corymbs below the summit of the branch each corymb containing five or six flowers — The other four species detected by Mr Booth are. *R. Jénkinsi* Nutt., a fine species, hardy, or nearly so somewhat similar to *R Máddeni*, growing to the height of six or seven feet, and having, it is believed, yellow flowers, *R longifolium* Nutt, a plant with magnificent leaves, discovered on the slopes of the Oola Mountains, at an elevation of from 6000 to 7000 feet, and likely to prove hardy in this country, *R Nuttallii* Booth, a magnificent greenhouse species from Bhotan, with very large white flowers tinted with rose and yellow at the base, and delightfully fragrant, the flowers are indeed larger than those of any other known Rhododendron; and *R Wrightiæ* Nutt a fine hardy species, having a dwarf habit, and producing its deep crimson-scarlet flowers in large trusses

RHODODÉNDRON NÍVEUM *J D Hook*, Bot Mag. t 4730 This very beautiful species was found by Dr. Hooker in the Sikkim Himalaya, at an elevation of from 10,000 to 12,000 feet It flowered for the first time in this country in the Royal Gardens of Kew, in May, 1853 It forms a small shrub, with moderately large leaves and rather numerous flowers, which are externally of a yellowish lilac, internally of a pallish lilac blotched with deeper lilac, and having, a the inner base five deep blood-purple spots. The form of the flower is broadly campanulate.

RUBUS BIFLÒRUS *Buchanan*, R pedunculòsus *D. Don*, Bot Mag t 4678 This extremely handsome Bramble was received by Messrs Veitch and Son from Nepal, and cultivated by them for some time under the name of *R leucostémus*, a name which it might justly claim (from the pure white of the stems of the plant) were it not that a North-west American species had been so designated by Douglas, and the name adopted by Drs Torrey and Gray in their *Flora of North America* The plant is quite hardy and very ornamental and striking from the bold white stems and the copious white flowers, which are produced in May and June, and which are succeeded by "the good-sized and well-flavoured orange or rather deep amber coloured fruit in the early autumn" It would be worth considering, whether this very handsome and agreeable fruit would not be deserving of cultivation for the table.

SABBÀTIA STELLÀRIS. A beautiful greenhouse herbaceous perennial from the Southern United States, with deep rose-coloured flowers, having a yellowish-green star-shaped eye

SALVIA IÁNTHINA *Otto & Dietr.* This very ornamental species has flowers of a dark violet, the calyx and bracts being of the same colour. It is a native of the mountains of Peru, and half-hardy in this country.—S. PARRY-NÁNTHA *Dec* is a dwarf species, a native of Mexico and Central America, with erect racemes of brilliant scarlet flowers.

SANDERSÒNIA AURANTÌACA *Hook.*, Bot Mag t 4716 *Liliàceæ*. This remarkable plant was discovered on "Five Hill near D'Urban, and on the Swartkop Hill, near Pietermaritzborg, Natal, flowering on the 15th of November 1851," by John Sanderson, Esq., secretary of the Horticultural Society of Natal, in compliment to whom the genus has been named The flowers are produced from the axils of the superior leaves, they are large for the size of the plant, sub-globularly campanulate, drooping, and of a deep orange colour. The plant is a tuberous-rooted greenhouse perennial.

SCHRÈBIA MEXICANA *Seemann*, Bot Mag t 4743 A splendid plant with large violet flowers, nearly allied to *Achimènes*. It is a Mexican cool-stove perennial.

SCHIZÁNTHUS VIOLÀCEUS *Hort* A handsome half-hardy annual, with violet-coloured flowers, which has been raised in the French gardens

SCIADÓCALYX WARSCEWICZII *Regel*, *Gésnera* Regeliàna *Hort*, is a magnificent plant from Santa Martha, with a profusion of scarlet and purple flowers.

SCUTELLÀRIA VILLÒSA. A rather coarse-leaved soft-wooded stove shrub from the Andes of Peru, with bright scarlet flowers.

SEMEIÁNDRA GRANDIFLÒRA *Hook.*, Bot Mag. t 4727. A dwarf shrub, with scarlet flowers about the size of those of a *Fúchsia*, to which genus it is nearly allied

SENÈCIO PRAÆCOX This is a tree groundsel from Mexico, the foliage of which is coarse, but its yellow flowers are extremely showy in the spring It is a greenhouse shrub

SIPHOCÁMPYLOS ORBIGNIANUS *D C*, Bot Mag t 4713 This plant has a peculiarly lax habit, so that the stems require to be supported by a stick, and the branches are quite pendent It is a native of Bolivia, where it was discovered by D'Orbigny, after whom the species is named It is a stove perennial, with handsome foliage and good yellowish flowers, tinged on the back or superior side with red, which, however, are not so highly coloured as those of many of the other species

SIPHOCAMPYLOS PENDULIFLORUS A handsome scandent stove perennial from the Caraccas, the flowers of which are white and rose.

SOLLYA DRUMMÓNDII A pretty, slender, greenhouse evergreen climber from Australia, with bright blue flowers

SONERILA MARGARITACEA. A beautiful little stove perennial from India, with deep green leaves, marked with white oval spots, "as if sown with pearls," and bright rose-coloured flowers Introduced by Messrs Veitch and Son

SONNERÌLA ORBICULÀTA *Lindl* This is a pretty perennial species from the Neilgherries, also with rose-coloured flowers It requires a stove

SOPHÒRA SECUNDIFLÒRA *Dec* A shrub with blue flowers and one-seeded legumes, the seeds being as large as a pea and the colour of coral. It is a native of Texas, and nearly hardy in Europe

SPIRÆ'A GRANDIFLÒRA *Hook.*, Bot Mag t 4795 A splendid species, introduced by Mr Fortune, which flowered in England for the first time in May 1854 the flowers are large and white, resembling those of an *Amelánchier* the shrub appears hardy in the climate of London.

TÁXUS LINDLEYÀNA. This species was found growing on the banks of a creek, under the shade of lofty trees by Mr W Murray of San Francisco, when exploring the range of mountains which runs between the coast range and the Rocky Mountains, lat 40°, 41°, &c N It formed a tree of considerable size, with the trunk measuring fifty inches in circumference at five feet from the ground The branches were very long and pendulous, and the wood, which is used by the savages for their bows, is extremely elastic The berry is red, and grows on the under side of the branches It is exactly like the berry of the Irish Yew, each berry having one seed

TÉCOMA SPECTÁBILIS. A very showy cool-stove shrub or small tree from New Grenada, with large, bright red flowers, which are produced in terminal clusters

THUÍOPSIS BOREÁLIS. This is a garden name for some unrecognised and possibly new hardy conifer, which is reported to have come from the north of India. It is in the possession of Mr Pontey, of Plymouth

THUÍOPSIS DOLABRÀTA *Sieb et Zucc* A very beautiful large evergreen tree, indigenous to Japan, the Island of Nipon, &c, with a thick trunk and verticillate drooping branches It is doubtful whether it will prove hardy in this country. It is the *Platycladus dolabràta* of Spach, and the *Thùja dolabràta* of Thunberg

THUJA GIGANTÈA *Nutt* A very handsome hardy evergreen tree indigenous to North-West America, along the banks of the Columbia River, and Nootka Sound, and attaining the height of from 60 to 170 feet The branches which resemble some of the more graceful species of *Lycopòdium*, are spreading, with compressed flattened erect branchlets It is the *Thùja Menzièsii* of Douglas, and it has, in addition, as synonymes the names *Thùja Craigiàna* and *Libocedrus decúrrens*. The species is in the possession of Messrs Low and Co, of Clapton and of Messrs. Lawson and Son, of Edinburgh.

TORREÝA MYRÍSTICA *Hook*, Bot Mag t. 4780 A very ornamental tree, found on the Sierra Nevada, a mountain range in California, by Mr W Lobb, the well-known and very successful collector of Messrs Veitch of Exeter. Its habit of growth resembles that of the *Cephalotáxus*, but the fruit is very curious, as it forms a kind of drupe about the size of a walnut, the stone of which contains a kernel enveloped in a ligament resembling that of the nutmeg, and hence the specific name. The plant is called the Californian Nutmeg.

TOVÀRIA PÈNDULA A greenhouse annual from Venezuela, with yellowish-white flowers. Of botanical interest chiefly.

TRICHOCÈNTRUM PINÈLII and T PURPÚREUM. These are two small and rather unimportant stove epiphytes, the first from Demerara, with olive-green flowers, and the second from Rio, with cinnamon-coloured flowers

VACCINIUM OVÀTUM *Pursh*, V prunifòlium *Hort*, Bot Reg t. 1354, and Bot. Mag t 4732 This very little known species was first discovered by Menzies in North-west America, and afterwards traced by Lewis and Scouler and by Douglas, extending in the Oregon territory from the 40° to the 49° of latitude. It was introduced by Douglas to the Horticultural Society of London, and is perfectly hardy, and very ornamental The leaves are glossy and evergreen; and the flowers, though much concealed by the foliage when looked on from above are of a waxy yellowish-white, delicately tinged with pale pink.

VALLISNÈRIA SPIRÀLIS For a considerable time we only possessed the female plant of the curious and interesting *Vallisnèria spirális*, recently, however, the male plant has been obtained. It has sessile flowers At present it is extremely rare in this country

VERÓNICA KERMESÍNA. A handsome dark variety of *Verónica speciòsa*, which has been raised by J. Luscombe, Esq

of Coombe Royal, Devonshire, and which is being sent out by Messrs. Lucombe, Pince, and Co., of Exeter. The flowers, which are produced in beautiful large spikes, are of a deep purplish-crimson; and the plants blossom when in a young state, which is not often the case with *I. speciosa*.

SALVIA VARIEGATA A very beautiful hybrid Veronica, raised by J. Anderson, Esq., of Maryfield, Edinburgh, between *V. Andersonii* and *V. salicifolia*, and being intermediate between the two parents. It has a compact habit of growth, and small glossy foliage. The flowers are produced in racemes abundantly on first appearing they are of a clear bright pink, gradually shading off to a pure white, and producing a striking effect. The plant has been brought into notice by Messrs. Veitch and Son.

SENECIO SUFFRUTICOSUS *Hort.* This promises to be a valuable evergreen shrub. It resembles the Laurustinus, and has greenish-white flowers. It has yet to be ascertained whether it will prove hardy in this country.

SIDA PEDATA *Willd.* This plant was introduced long ago, but it has been little known; now, however, it is being again brought into notice. It is in the possession of Messrs. Low and Co., of Clapton.

STANHOPEA QUADRATA A pretty orchid from Central America. The flowers are large and white, with an involute *Gloxinia*-like lip, which is deeply bordered with red.

STRUCKIA AMABILIS See *Dierrilla amabilis*.

WELLINGTONIA GIGANTEA *Lindl.*, Sequoia gigantea *Endl.*? The following particulars respecting this beautiful and remarkable tree, are extracted from an interesting account given by Dr. Lindley, in the *Gardeners' Chronicle*, at the close of 1853, when the plant received from that able botanist the name which it now bears. "The other day," Dr. Lindley observes, "we received from Messrs. Veitch, branches and cones of a most remarkable coniferous tree from California, seeds and a living specimen of which had just been brought them by their excellent collector, Mr. William Lobb, who, we are happy to say, has returned loaded with fine things. Of that tree Mr. Lobb has furnished the following memorandum:—'This magnificent evergreen tree, from its extraordinary height and large dimensions, may be termed the monarch of the Californian forest. It inhabits a solitary district on the elevated slopes of the Sierra Nevada, near the head waters of the Stanislau and San Antonio rivers, in lat. 38° N., long. 120° 10' W., at an elevation of 5000 feet above the level of the sea. From eighty to ninety trees exist, all within the circuit of a mile, and these varying from 250 feet to 310 feet in height, and from 10 to 20 feet in diameter. Their manner of growth is much like the *Sequoia* (*Taxodium*) *sempervirens*: some are solitary, some are in pairs; while some, and not unfrequently, stand three and four together. A tree recently felled measured about 300 feet in length, with a diameter, including the bark, 29 feet 2 inches, at 5 feet from the ground, at 18 feet from the ground it was 14 feet 6 inches through, at 100 feet from the ground, 14 feet, and at 200 feet from the ground, 5 feet 5 inches. The bark is of a pale cinnamon brown, and from 12 to 18 inches in thickness. The branchlets are round, somewhat pendent, and resembling a cypress or juniper. The leaves are of a pale grass green, those of the young trees are spreading, with a sharp acuminate point. The cones are about 2½ inches long, and 2 inches across at the thickest part. The trunk of the tree in question was perfectly solid, from the sap wood to the centre, and, judging from the number of concentric rings, its age has been estimated at 3000 years. The wood is light, soft, and of a reddish colour like Redwood or *Sequoia* (*Taxodium*) *sempervirens*. Of this vegetable monster 21 feet of the bark, from the lower part of the trunk, have been put in the natural form in San Francisco for exhibition: it there forms a spacious carpeted room, and contains a piano with seats for forty persons. On one occasion 140 children were admitted without inconvenience." An exact representation of this tree, in lithograph, from a drawing made on the spot, has been published by Messrs. Veitch, since the return of Mr. Lobb from his successful mission to California. From an account by Dr. C. F. Winslow, given in the *Californian Farmer* (a weekly journal published at San Francisco), subsequently to that by Dr. Lindley from which the above is a quotation, we learn that the dimensions recorded by Mr. Lobb do not give us the full height to which this splendid conifer attains, by more than 100 feet, one specimen having been found measuring 450 feet from its head to its root! This specimen is said to have been 51 feet in diameter at 350 feet from its upturn root! We learn further from Dr. Winslow's observations, that the locality in which this gigantic tree is found, seems to be confined to an area of a few acres, and that the soil and atmosphere of the place of growth are singularly humid. But what concerns us most to know is, that this very important acquisition to our hardy conifers is now readily obtainable, those enterprising nurserymen, Messrs. Veitch and Son, having succeeded in raising a large number of fine healthy young plants from the seeds brought home by Mr. Lobb. In the *Bon Jardinier* for 1855 it is said to be identical with the *Sequoia gigantea* of Endlicher, but a plant growing under that name in the Exeter Nursery appears to be quite distinct.

WHITLAVIA GRANDIFLORA A very beautiful hardy Californian annual, with the habit of *Eutoca viscida*. Introduced by Messrs. Veitch and Son. The flowers are large and bell-shaped, and of a deep purple.

XANTHORRHŒA HASTILE *R. Br.*, Bot. Mag. t. 4722. In describing this plant in the *Botanical Magazine*, Sir William Hooker observes, "The Gum trees, or Grass Gum trees, as they are sometimes called, of Australia, are among the most remarkable vegetable features of the colony. An excellent group of them is represented in Mr. Backhouse's *Narrative of a Missionary Journey in New South Wales*, in the table at p. 171. That peculiar species, however, is considered to be the *X. arborea*, having an arborescent and branched stem." All the species, probably, yield a resinous gum, which, when strewed on hot coals, emits a fragrant smoke, "smelling like a mixture of balsam of Tolu and benzoin," and now used, we are told, as incense in the Roman Catholic churches of the colony. The "Yellow Resin" is the product of the plant under notice, *X. hastile*, which is said to have been introduced as long ago as 1803, but soon lost. It was, however, reintroduced from Port Jackson in 1845, through Mr. Kidd then having the temporary charge of the Botanic Garden of Sydney. The specimen thus obtained blossomed in the Royal Gardens of Kew in the spring of 1853, while still, it is presumed, comparatively a small plant, the whole height being barely six feet, whereas in its native country the scape of the plant alone attains a height of eighteen or twenty feet, and is used by the natives in making spears (whence the specific name *hastile*) and fish-gigs, being pointed with the teeth of fish or other animals. The leaves are three feet or more in length, the scape is terminal, solitary, and quite erect, bearing at the apex a dark brown downy spike (not unlike the head of the greater Reed-mace), consisting of a vast quantity of scaly bracts, which give the colour to the spike, and the flowers are amongst these bracts, and are small and sessile. This plant is the Yellow Resin Tree of White.

GENERAL INDEX,

COMPREHENDING

THE SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND SYSTEMATIC SYNONYMES IN COMMON USE.

Where *n.* is added after the name, it refers to the note: *s.* indicates a synonyme.
